Date: April 2, 2014

Dwayne Holmes  
Holmes Bar NE Ranch  
4751 South 500 East  
Vernal, UT 84078

Dear Dwayne,

This letter will serve as our Annual Operating Instructions (AOI) for the Black Canyon Allotment during the 2014 grazing season. The following items were discussed and agreed upon at our Annual Operating Meeting on April 1, 2014 and will guide our management of the allotment this year.

**Grazing Schedule**

The scheduled dates below are to be used as guidelines. The amount of time spent in each unit will depend upon actual forage utilization and distribution patterns. It is the responsibility of the permittee to move cattle when allowable use standards are met. The dates proposed and the units scheduled are tentative and depend upon the availability of forage, water, and the effects of weather. We will follow the proposed schedule unless there is good reason to change. Please let us know in advance if you anticipate any variance from this schedule.

<u>Permittee</u>	<u>Number</u>	<u>Nonuse</u>	<u>Permitted Season</u>
Holmes Bar NE Ranch, LLC	300	75	June 16 to October 15

**Grazing Schedule**

<u>Unit</u>	<u>Sequence</u>	<u>Dates of Use</u>	<u>Allowable Use</u>
Alma Taylor	1 <sup>st</sup>	6/16 – 6/29	50%
North Brownie	2 <sup>nd</sup>	6/30-7/31	50%
Frenches Park	3 <sup>rd</sup>	8/1-8/29	50%
Charley's Park	4 <sup>th</sup>	8/30 – 10/1	50%
East End	5 <sup>th</sup>	10/2 – 10/15	50%

Note: Alma Taylor and East End Units will be used for 5 days to gather cattle at the end of the season (10/10-10/15).

### **Proper Allowable Use**

The maximum allowable forage use practices described in your permit will be implemented in each unit on the allotment. The grazed unit needs to be checked regularly by the permittee(s) to ensure that maximum allowable forage use levels are not exceeded. When the maximum allowable forage use levels are met, permittees are expected to move cattle into the next unit immediately. If the maximum allowable forage use occurs on the allotment before the scheduled allotment off date, permittees will remove cattle from the allotment.

The primary determining factor for moving livestock from one unit to the other is utilization. It is the responsibility of the permittee to move cattle when allowable use standards are met. Allowable use will be monitored at key areas on the allotment. Key areas are those rangelands or riparian areas on the allotment most preferred by livestock and are typically grazed first and receive the most concentrated use. When allowable use is met in key areas, cattle will be moved to the next scheduled unit or removed from the allotment, if it is the last scheduled unit to be grazed.

Allowable use levels were determined in the Allotment Management Plan for the Bowden Draw Allotment. Allowable use is 50% in upland forage areas in all units. A four to six inch stubble height of riparian forage species, such as sedges, will be left in all riparian areas (i.e., stream corridors and wet meadows) at the end of the grazing season. Utilization cages, ocular utilization examinations, or stubble height measurement may be used to determine forage use by livestock in key areas.

### **Fees**

Please ensure that your Bill for Collection for the upcoming grazing season is paid by the due date.

### **Range Improvement Maintenance and Construction**

All allotment boundary fences, division fences, water developments, and other improvements of the first unit used will be repaired before livestock are allowed onto the allotment. All water developments, unit fences, and other improvements will be in good working order before cattle are permitted to enter the next scheduled unit in the rotation. We will be inspecting these fences and developments before livestock go on and also before they move into each unit. If these repairs are not done, you will not be allowed onto the allotment, or you may be required to come off the allotment early. Improvements scheduled for maintenance this year include:

1. Maintain Bodily Pond and log worm enclosure and trough
2. Taylor Camp Seep (Turkey Pond) Trough, pond, enclosure (replace with post/pole)
3. Dry Fork Trail Pond, Enclosure (long-worm with local dead material) and new trough (pipeline repair and Dry Fork Pond ext trough #2)
4. Maintain fence and trough at East End Pond #1 at East End/Alma Taylor Pasture fence
5. Maintain Aspen Pond fence and trough
6. Mud Springs Pond enclosure and trough
7. Dry Fork Face Pond, pipeline and trough (remove trough and fence-does not hold water except for runoff)

**Weed Free Hay**

Any hay or straw used in association with your grazing permit should be certified and tagged as noxious weed free as directed by Forest Service Order #04-00-097. Please make sure that any hay, straw or mulch used on the Forest complies with this order.

**Grazing Use Record**

Enclosed is a Grazing Use Record. Please use this form to keep track of your livestock movements into and out of pastures. Make sure that the information is correct and returned to our office **no later than October 30<sup>th</sup>**.

We look forward to working with you again this year, and appreciate your willingness to cooperate with us in the proper management of the Black Canyon Allotment. If you have questions or concerns, please contact Garry Brown at (435) 781-5168 or (435) 790-7030 cell.

Sincerely,

NICHOLAS T. SCHMELTER  
District Ranger
