CAMPFIRES
DON'T LET YOUR CAMPFIRE BECOME A WILDFIRE!
Campfires are one of the pleasures of camping in the National Forest. No matter what time of year, people need to be careful when deciding when and where to build a campfire.

PLEASE CHECK IF THERE ARE ANY CAMPFIRE RESTRICTIONS IN EFFECT BEFORE BUILDING A CAMPFIRE!

IF YOU ARE GOING TO HAVE A CAMPFIRE:
■ Use an existing fire ring, don't create a new one. When not in a designated campground, build your fire within a ring of rocks.
■ Clear all vegetation away from fire ring (remove materials such as needles, leaves, sticks, etc.)
■ Select an open level spot away from trees, logs, stumps, overhanging branches, dry grass.
■ Keep your campfire small.
■ Have plenty of water and a shovel for throwing dirt on fire if it gets out of control.
■ Never leave a campfire unattended! Even a small breeze could quickly cause the fire to spread. Make sure a responsible adult is always in attendance.
■ It only takes one to start a forest fire.
Never leave a campfire unattended! Even a small breeze could quickly cause the fire to spread. Make sure a responsible adult is always in attendance.

WHEN PUTTING OUT YOUR CAMPFIRE:
■ First, drown the campfire with water!
■ Next, mix the ashes and embers with soil. Scrape all partially-burned sticks and logs to make sure all the hot embers are off them.
■ Stir embers after they are covered with water and make sure everything is wet.
■ Feel the coals, embers, and any partially-burned wood with your hands. Everything (including the rock fire ring) should be cool to the touch.
■ When you think you are done, take an extra minute and add more water.
■ Finally, check the entire campsite for possible sparks or embers, because it only takes one to start a forest fire.

REMEMBER... IF IT IS TOO HOT TO TOUCH, IT IS TOO HOT TO LEAVE.
Please take time to completely put out your campfire and prevent a wildfire!
