Little Piney C&H ALLOTMENT  
YEAR 2013 ANNUAL OPERATING INSTRUCTIONS

Permitted and Authorized for 2013:

Little Piney Allotment	LS Kind	LS Class	Permitted			Authorized		
			LS #	From	To	LS#	From	To
Fidelity Services LLC	Cattle	Mature	67	7/1	9/30	60	8/1	9/30

- Before Entering the Allotment

I suggest that you review your term grazing permit and the following Annual Operating Instructions, and ask questions if any portion is not clearly understood.

Year 2013 grazing fees are \$1.35/head month, and must be paid before livestock can be turned onto the Forest. Please give either Scott or Kerri at least three days advance notice of the actual date and number of livestock entering the National Forest and, upon request, provide for having stock counted.

2013 Rotation:

Little Piney	2011	2012	2013	2014
Allotment-wide	Late	Early	Late	Early

- Entering the Allotment

Year 2013 is planned as a late on-date for Little Piney C&H Allotment as displayed in the table above and described in your AMP. Plan to turn livestock onto the allotment on or after August 1. Your on-date is discussed in the revised AMP for Little Piney C&H allotment.

- Resource Guidelines

Little Piney C&H Allotment resource guidelines are described in the Bighorn National Forest Vegetation Grazing Guidelines, the Bighorn Forest Plan, and in NEPA analysis for AMP revision. The allowable use guidelines for utilization of the current year's forage are listed in the following table. These guidelines are applicable at the time the livestock leave the unit and include use by both livestock and wildlife.

Little Piney C&H Allotment is managed under a "rotation" grazing strategy. The figures below are maximum upland allowable use and riparian stubble height guidelines, by key area, based upon a 07/19/2006 assessment of 'meeting or moving toward' desired conditions on benchmark sites.

Pasture	Key Area		Key Species	Allowable Use Guideline	
	#	Type			
Outhouse Park	1	Riparian	Carex	Meeting	5 inches
Cow Park	2	Riparian	Carex	Meeting	5 inches
Hepp Park	3	Riparian	Carex	Meeting	5 inches
Bear Gulch Park	4	Riparian	Carex	Meeting	5 inches
Road Park	5	Riparian	Carex	Meeting	5 inches
Loren Park	6	Riparian	Carex	Meeting	5 inches
Joe Brown Park	7	Upland	Forage	Not Meeting	35%

Vegetation residue guidelines are expressed in terms of the inches of stubble height to be left, measuring longest leaf of designated Carex species, after livestock use. In this case, all wide leaved sedges have been designated, subject to update.

Moves onto the allotment are dependent upon the later of either the above scheduled date or range readiness. When it is determined that further use and impacts will exceed allowable use levels, livestock are required to be moved off National Forest. It is your responsibility to see that livestock are managed to best utilize available forage while assuring guidelines are not exceeded. Since precipitation, forage production levels, and other factors change from year to year and livestock utilization patterns vary, this will require monitoring by you and/or your rider throughout the season.

Livestock use beyond allowable guidelines could result in an administrative action in subsequent years, such as an adjustment to the season of use, in order to allow plants a chance to recover and restore root reserves.

- Monitoring

The primary emphasis for monitoring should be placed on measuring stubble height in riparian areas, and estimating percent by weight of forage removed on upland sites, as described above. If issues are raised indicating the need to monitor aspen, stream banks, or willows, we prefer to jointly determine monitoring protocols and locations. Permittees are no longer required to submit annual stubble height data; however, it is strongly recommended that you continue monitoring. Actual use data is still to be turned in by permittees. Any data you collect and submit will be maintained in permanent monitoring files.

To facilitate monitoring livestock use, and to avoid the need to measure utilization on all Suitable rangeland, monitoring will be done using a key area concept. The key area concept and specific key areas for Little Piney C&H Allotment are described in the revised Allotment Management Plan.

I encourage you to keep notes throughout the grazing season. Should your data indicate changes might be needed in key area locations, contact Scott or Kerri to discuss adjustments.

- Maintenance of Improvements

There are no existing or proposed range improvements on this allotment with assigned maintenance to the Little Piney C&H Allotment Permittee.

- Salting Practices

The proper use of salt can be used as a management tool to help achieve proper utilization. The following guidelines must be followed when salting unless you have been given direction by a Forest Officer to do otherwise:

- a) Scatter salt in its proper location prior to livestock entering the pasture.
- b) Salt should be placed between water developments, and at least 1/4 mile from water if possible.
- c) Salt away from small parks, trails, roads, and areas of concentrated public use.
- d) Salt should be placed in areas of rock outcrops, mature timber stands (other than aspen), or areas of dense sagebrush.
- e) Change your salt location at least every year and preferably every time salt is placed. Moving salt blocks at least 100 feet can prevent an area from becoming abused from salt placement year after year.
- f) Remove salt from an area when proper use is reached.

- Other

Any dead livestock shall be moved to a location greater than 200 feet from water, 500 feet from developed campgrounds, and out of view from roads or trails.

Documentation on the enclosed Annual Use Report is required, and will help us to plan livestock use in the future. Please make sure both on and off dates are recorded for each pasture as well as the number of cattle. Feel free to make any other pertinent management notes, as they will be helpful in determining future management decisions for the allotment. Return the Actual Use Report to the Powder River Ranger District Office by December 31, 2013.
