The Deschutes National Forest has begun implementation of a multi-year project in the Rimrock area. This project will add approximately 4.75 miles of trail to the official trail system. This project will also include closure and restoration of several unauthorized trails in the area. The overall goal of the project is to provide sustainable recreation opportunities that also protect natural resources and wildlife.

Please be aware that conditions on the ground may not exactly match this map until project implementation is complete.
