

SPECIES: Scientific [common]	<i>Glacicavicola bathyscioides</i> [Blind Cave Leiodid Beetle]
Forest:	Bridger-Teton National Forest
Forest Reviewer:	Randall Griebel, James Wilder
Date of Review:	1/10/2020; reviewed 4/22/2025
Forest concurrence (or recommendation if new) for inclusion of species on list of potential SCC: (Enter Yes or No)	NO

FOREST REVIEW RESULTS:

1. The Forest concurs or recommends the species for inclusion on the list of potential SCC:
Yes____ No X
2. Rationale for not concurring is based on (check all that apply):
Species is not native to the plan area _____
Species is not known to occur in the plan area X____
Species persistence in the plan area is not of substantial concern _____

FOREST REVIEW INFORMATION:

1. Is the Species Native to the Plan Area? Yes X No____

If no, provide explanation and stop assessment.
2. Is the Species Known to Occur within the Planning Area? Yes ____ No X____

If no, stop assessment.

Two occurrences of *Glacicavicola bathyscioides* were recorded in Teton County, Wyoming in 1978 and 1979 (NatureServe 2019; WYNDD 2019). These occurrences were just outside the BTNF boundary on the Caribou-Targhee National Forest (WYNDD 2019). No recent observations of this species have been reported in the state, on or off the Forest. Because no occurrences have been recorded on the BTNF, and no occurrences have been recorded nearby or anywhere in Wyoming in 40 years, there is no evidence to suggest that *Glacicavicola bathyscioides* occurs within the planning area.
