

*BRIDGER-TETON NATIONAL FOREST
GREYS RIVER RANGER DISTRICT*

2026 ANNUAL OPERATING INSTRUCTIONS

Virginia Peak Allotment (excluding portions of South Unit).

Bear Creek (Upper Cabin Creek unit only) and Three Forks (excluding Upper Basin unit)

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 18th. Situations may develop during the grazing season in which it requires changes to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. **You must continue to meet all the eligibility requirements** set forth to qualify for this permit, including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. The bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

<u>Permittee</u>	<u>Allotment</u>	<u>Authorized Numb</u>	<u>Season of Use</u>
Child Ranch LLC.	Virginia Peak	1200 ewe/lamb	7/6 – 8/7
	Bear Creek	1200 ewe/lamb	8/8 – 8/20
	Three Forks	1200 ewe/lamb	8/21 – 9/15

Table 1.0 Virginia Peak/Bear Creek Allotment: Proposed Grazing Schedule and Proper Use Criteria¹

Order	Allotment – Unit	No. of Days	Planned Dates
1	Virginia Peak - North unit	10	7/6 - 7/18
2	Virginia Peak - Middle unit	16	7/19 - 8/1
3	Virginia Peak - South unit	3	8/2 - 8/7
4	Bear Creek – Upper Cabin Cr.	16	8/8 – 8/20
5	Three Forks – Bear Cr/Elk Cr	5	8/21 – 8/25
6	Three Forks – N Three Forks	5	8/26 – 8/30
7	Three Forks – S Middle Three Forks	5	8/31 – 9/4
8	Three Forks – Rock Creek	5	9/5 – 9/9
9	Three Forks – Crow Creek	4	9/10 – 9/13
Trail Off		2	9/14 – 9/15

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment.

Permitted livestock for the Virginia Peak allotment will be trucked to the Meadows Guard Station via the Greys River Road to be unloaded and moved directly into the Virginia Peak allotment within 1 day. Livestock is to use the Way Trail and its vicinity when being moved between the Virginia Peak and Three Forks allotments. Movement of livestock will occur in 5 days or less. Trail off National Forest lands via

Smith's Fork Road on or before September 15th. All livestock are to be off National Forest lands by the 15th of September.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual areas being grazed may occur where units are adjacent to each other and where a clear geographic boundary or other marker is not present. Every effort should be made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported on the same day they occur or as soon as possible thereafter. Reports are to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(es). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses plus the number that exits. Any differences should result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding and minimize the use of sheep dogs to avoid soil displacement and overgrazing.
- Once-over-lightly grazing. Graze rather than trail to water and do not water at the same locations.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days' use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.
- Salt can be used to improve livestock distribution within the allotment.

- All salting will be done away from key forage use areas and traditional livestock congregating areas.
- Prior to an area reaching the forage use standard, all salt will be removed.
- Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).
- Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
- Salt will be placed on rock or hardened areas.
- Salting areas should be rotated from year to year.
- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction and allotment management plan.
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat, and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers, and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be highline, picketed, or hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal includes removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway, or trail.
- Please inform the Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax, and Leafy Spurge. Please pull Spotted Knapweed and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs in the wrong unit to be grazed, immediately contact Brad and let him know what has been done to alleviate the situation.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

2026 ANNUAL OPERATING INSTRUCTIONS

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on February 23, 2026. Situations may develop during the grazing season in which it requires changes to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. **You must continue to meet all the eligibility requirements** set forth to qualify for this permit, including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. Bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

Permittee	David and Lynda Erickson
Kind	Cattle
Class	Cow/calf
Numbers	70
Season of Use	June 16-Sept 30
Non-use	0

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of term grazing permit Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.

Management Direction

- There will be enough riders to achieve proper distribution of livestock within the allotment. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.
- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas.

- Proper Use Criteria is $\leq 50\%$ of key forage species and $\geq 4''$ residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization means it is time to move into the next scheduled unit or to come home early. Equal utilization of the range is the objective. Corrective measures will occur if inspections reveal areas of over utilization, riparian damage, or other damage. These corrective measures may result in livestock being removed from National Forest lands and action taken against term grazing permit.
- Certified weed-free hay, cubes, and straw are required on the Forest.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax, and Leafy Spurge. Please pull Spotted Knapweed and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittee's responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs or cattle were in the wrong unit to be grazed, immediately contact Brad, and let him know what has been done to alleviate the situation.
- Ensure you take every reasonable effort to ensure all cattle are removed by and do not return to National Forest lands after the off date.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

- Suter Canyon #3007 water development will be a low priority while fence construction along the forest boundary is in progress.
- Clearing of trees and brush for fence construction should stay within a 20ft corridor.

GREYS RIVER RANGER DISTRICT*

**SPRING CREEK ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on February 16, 2026. Situations may develop during the grazing season in which changes may be required to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. **You must continue to meet all the eligibility requirements** set forth to qualify for this permit, including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. The bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

Group text will be used to initiate communication of allotment needs to all permittees. Permittees can call or text Brad with individual questions on the allotment.

Table 2.0 – Spring Creek Allotment: Proposed Grazing Schedule and Proper Use Criteria¹

Order	Unit	No. of Days	Planned Dates
1 st	First Pasture	Up to 20	Range Ready - June 20
2 nd	Second Pasture ²	27	June 21 – July 17
2 nd	Big Ridge ²	27	June 21 – July 17 North end
3 rd	Big Ridge ²	80	July 18 – Oct- 4 South end
3 rd	Third/ Elbow Pasture	80	July 18 – Oct 4
4 th	First Pasture	5	Oct 5- Oct 10

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. ²About 150 head to graze the Big Ridge pasture.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual areas being grazed may occur where units are adjacent to each other and where a clear geographic boundary or other marker is not present. Every effort should be made to ensure cattle are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this. Round up is to begin at least 3 days prior to the off date and in the corrals on October 10th. Every effort must be made to completely remove cattle from the National Forest by the scheduled off date as indicated by the round up plan that was provided.

Management Direction

- There will be enough riders to achieve proper distribution of livestock within the allotment. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.
- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas.
- Proper Use Criteria is $\leq 50\%$ of key forage species and ≥ 4 " residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization means it is time to move into the next scheduled unit or to come home early. Equal utilization of the range is the objective. Corrective measures will occur if inspections reveal areas of over utilization, riparian damage, or other damage. These corrective measures may result in livestock being removed from National Forest lands and action taken against term grazing permit.
- Certified weed-free hay, cubes, and straw are required on the Forest.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.

- Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
- Salt will be placed on rock or hardened areas.
- Salting areas should be rotated from year to year.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax, and Leafy Spurge. Please pull Spotted Knapweed and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittee's responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs or cattle were in the wrong unit to be grazed, immediately contact Brad, and let him know what has been done to alleviate the situation.
- Follow your approved gather plan when removing livestock from National Forest lands. Ensure you take every reasonable effort to ensure all cattle are removed by and do not return to National Forest lands after the off date.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed on-date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

Projects are dependent upon funding and materials becoming available.

- Main Spring Creek corral improvement priority #1
- First Creek fence priority #2

Appendix A –Range Readiness

Livestock will not be placed on the allotment until soils are dry enough to prevent damage to soils/vegetation and when key plants are phenologically ready to be grazed. Range readiness indicators for vegetation are shown below.

Plant Type	Visual	Phenology
GRASS		
Wheatgrass spp.	8-inch plant height	Seed stalk showing
Idaho Fescue	5-inch leave length	Seed head present
Prairie June grass	5-inch leave length	Seed head present
Sandberg bluegrass	Plant matures	Seed head in dough stage
Pinegrass	4–6-inch leaves	
Tufted hairgrass	6+ inch height	Seed head present
Kentucky bluegrass		Seed head present
GRASSLIKE		
Nebraska sedge		Seed in late dough
FORBS		
Western Yarrow	Flower stalk showing	
Arrow leaf Balsamroot	$\frac{3}{4}$ leaf development	Blossom beginning
Geranium	4-inch leave length	Flower in bloom
SHRUBS		
Serviceberry		Blossom present
Antelope Bitterbrush		Flower bud swollen
Snowberry		7-8 bud leaves unfolded

**North Salt River ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 5th. Situations may develop during the grazing season in which changes may be required to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. You must continue to meet all the **Eligibility Requirements** set forth to qualify for this permit including those related to base property and livestock ownership. Do not make changes to these items without first consulting with Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. Bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

<u>Permittee</u>	<u>Authorized Number</u>	<u>Season of Use</u>
Kunzler Sheep & Cattle	1000 ewe/lamb 6 horses	7/6 – 9/18 7/6 – 9/18

Order	Unit	No. of Days	Planned Dates
1 st	Water Canyon	22	7/6 – 7/27
2 nd	Middle Unit	10	7/28 – 8/7
3 rd	Mount Wagner	12	8/8 – 8/19
4 th	Middle Unit	4	8/20 – 8/23
5 th	Water Canyon	22	8/24 – 9/18

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Proper Use Criteria is ≤50% of key forage species and ≥ 4” residual stubble height of graminoids along the greenline.

Permitted livestock from the North Salt River allotments will graze directly from BLM administered lands to the allotments where they are permitted to graze. Permitted livestock from the North Salt River allotment will graze from the allotment to BLM lands when leaving National Forest lands.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual units being grazed may occur where lack of clear geographic boundary or other marker is not present. Every effort should be made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized

to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter the bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported the same day they occur or as soon as possible thereafter. Reports to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(s). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses, plus the number that exits. Any differences to result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding and minimize the use of sheep dogs to avoid soil displacement and overgrazing.
- Once-over-lightly grazing. Graze rather than trail to water and do not water at the same locations.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.

- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction and allotment management plan.
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying of trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be Highline, picketed and hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Spotted Knapweed, Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs immediately contact Brad and let him know what has been done to alleviate the situation.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

Trail off		3	9/18 – 9/20	

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use.

Permitted livestock from the South Salt River allotments will graze directly from BLM administered lands to the allotments where they are permitted to graze and from the allotment to BLM lands when leaving National Forest lands.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual units being grazed may

occur where lack of clear geographic boundary or other marker is not present. Every effort should be made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter the bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported the same day they occur or as soon as possible thereafter. Reports to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(s). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses, plus the number that exits. Any differences to result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding and minimize the use of sheep dogs to avoid soil displacement and overgrazing.
- Once-over-light grazing. Graze rather than trail to water and do not water at the same locations.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days' use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).

- Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction and allotment management plan
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat, and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be Highline, picketed and hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax, and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs in the wrong unit to be grazed, immediately contact Brad and let him know what has been done to alleviate the situation.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of Term Grazing Permit will be completed at least one week prior to the proposed on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, (or, if reconstructed, to the standards listed in permit), livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

**MINK CREEK ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 10th. Situations may develop during the grazing season in which changes may be required to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. You must continue to meet all the **eligibility requirements** set forth to qualify for this permit including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. Bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

Trail Off		2	9/14 - 9/15

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Proper Use Criteria is ≤50% of key forage species and ≥ 4" residual stubble height of graminoids along the greenline.

Permitted livestock will enter the Bridger-Teton National Forest via Dry Creek Road (FS road 10071) at the FS-BLM boundary, overnight at this area. Livestock will then trail up the Smiths Fork Road (FS road 10072) overnight at Poker Hollow. They will then trail east over Commissary Pass to the Mink Creek allotment. This should take no more than 2 days. Livestock are to be removed via this same route. This should not take longer than 2 days. *Sheep are not to overnight in the Labarge Creek area.*

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual units being grazed may occur where lack of clear geographic boundary or other marker is not present. Every effort should be made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized

to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported on the same day they occur or as soon as possible thereafter. Reports to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(s). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses, plus the number that exits. Any differences to result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding and minimize the use of sheep dogs to avoid soil displacement and overgrazing.
- Once-over-light grazing. Graze rather than trail to water and do not water at the same locations.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days' use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).

- Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
- Salt will be placed on rock or hardened areas.
- Salting areas should be rotated from year to year.
- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction and allotment management plan
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers, and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be Highline, picketed and hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway, or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs in the wrong unit to be grazed, immediately contact Brad and let him know what has been done to alleviate the situation.

Neck	5	Oct 3 – Oct 7

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Collars will be used during the grazing season to further refine actual use within units. This will be coordinated with the Forest Service.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance to the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of term grazing permit Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Every effort will be made to ensure cattle are in the appropriate unit to be grazed. There may be times livestock are in the incorrect unit to be grazed due to circumstances beyond your control. When this occurs, promptly put these livestock back into prescribed grazing area. You are authorized to vary the number of days between unit moves by five days either way. Prior approval must first be received if the need arises to vary the number of days by more than this. **Round up is to begin at least 5 days prior to the off-date and in the corrals on October 7.** Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date as indicated by the round up plan that was provided.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual areas being grazed may occur where units are adjacent to each other and where a clear geographic boundary or other marker is not present. Every effort should be made to ensure cattle are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by five days either way. Prior approval must first be received if the need arises to vary the number of days by more than this. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off-date.

Management Direction

- Collars are going to be used this year on the allotment as a tool to assist in achieving management objectives on the allotment. Information will be used to assist in developing next year's AOI. Emphasis areas for this year will include...
 - Portions of McCain Meadows discussed during the 2026 AOI meeting
 - Steer creek spawning area that was excluded by an electric fence in 2025 grazing season.
- There will be enough riders to achieve proper distribution of livestock within the allotment. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.
- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas.
- Proper Use Criteria is $\leq 50\%$ of key forage species and $\geq 4''$ residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization means it is time to move into the next scheduled unit or to come home early. Equal utilization of the range is the objective. Corrective measures will occur if inspections reveal areas of over utilization, riparian damage, or other damage. These corrective measures may result in livestock being removed from National Forest lands and action taken against term grazing permit.
- Certified weed-free hay, cubes, and straw are required on the Forest.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use. All camps must have a serviceable axe and shovel for fire control.

- You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment.
- Burying of trash is not allowed. All trash will be removed from the National Forest.
- Temporary holding pens, corrals, mangers, and hitching racks will be removed when the camp is moved or relocated.
- Horses and mules used in conjunction with this permit will not be picketed or tied to trees in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway, or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs or cattle were in the wrong unit to be grazed, immediately contact Brad, and let him know what has been done to alleviate the situation.
- Follow your approved gather plan when removing livestock from National Forest lands. Ensure you take every reasonable effort to ensure all cattle are removed by and do not return to National Forest lands after the off date.
- Items that you want to discuss at next year's annual permittee meeting should be recorded with the completed actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

Maintenance of all your improvements listed in Part 3 of Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

Season of Use	June 16-Sept. 30
Non-use	

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in the suspension and/or termination of your term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn on. An allotment map is enclosed; this map shows the allotment boundary. Every effort must be made to remove cattle from the National Forest by the scheduled off date

Management Direction

- In lieu of using electric fence to control utilization levels at Bear Trap, at your discretion you may use virtual fencing to fence out this area. Regardless of the option you select you will still be held accountable to not exceed proper use criteria in this area.
- There will be enough riders to achieve proper distribution of livestock within the allotment. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.
- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas.

- Proper Use Criteria is $\leq 50\%$ of key forage species and $\geq 4''$ residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization means it is time to move into the next scheduled unit or to come home early. Equal utilization of the range is the objective. Corrective measures will occur if inspections reveal areas of over utilization, riparian damage, or other damage. These corrective measures may result in livestock being removed from National Forest lands and action taken against term grazing permits.
- Certified weed-free hay, cubes, and straw are required on the Forest.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax, and Leafy Spurge. Please pull Spotted Knapweed and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittee's responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs or cattle were in the wrong unit to be grazed, immediately contact Brad, and let him know what has been done to alleviate the situation.
- Follow your approved gather plan when removing livestock from National Forest lands. Ensure you take every reasonable effort to ensure all cattle are removed by and do not return to National Forest lands after the off date.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

Maintenance of all your improvements listed in Part 3 of Term Grazing Permit will be completed at least one week prior to the proposed on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

Other items discussed included:

- End-of-season monitoring to take place after October 1st.
- Halter Collar's will be used 2026 on a trial basis.
- The development of a unit within the allotment for improved livestock distribution.
 - Postponed for two years for Halter Collar trial period.

**FOREST DELL ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on February 16th. Situations may develop during the grazing season in which it requires changes to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. **You must continue to meet all the eligibility requirements** set forth to qualify for this permit, including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. Bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

Group text will be used to initiate communication of allotment needs to all permittees. Permittees can call or text Brad with individual questions on the allotment.

Non-use	0	0	0	0	0

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are representatives of management across the allotment.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual areas being grazed may occur where units are adjacent to each other and where a clear geographic boundary or other marker is not present. However, every effort should be made to ensure cattle

are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Management Direction

- Mitigation measures in this AOI have been put in place to limit livestock grazing impacts and allow recovery of vegetation and other Forest Resources after the 2025 fire. If monitoring indicates this mitigation measures are not being followed or are inadequate in allowing recovery post burning, you will be required to bring your livestock home early with only a short notice between being notified of the need to bring livestock home and the time required to have them off the Forest. As such you are strongly encouraged to have a plan in place in case this occurs.
- Livestock will enter allotment from the north and bypass the 2025 burn area in the south. Livestock exiting the national forest will leave from the north.
- There will be enough riders to achieve proper distribution of livestock within the allotment and to keep livestock out of the Willow creek fire area. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be made to completely remove cattle off the National Forest by the scheduled off date.
- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas such as the 2025 Willow Creek Fire.
- Proper Use Criteria is $\leq 50\%$ of key forage species and $\geq 4''$ residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization means it is time to move into the next scheduled unit or to come home early.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, and Musk Thistle as you come across it in your permitted activities.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by

November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.
 - Fence off Springs #3107 and #3116.

Other items particularly discussed included:

- State fence on right of away Hwy 89 near Salt Pass to be completed by the state.

Appendix A – Range Readiness

Livestock will not be placed on the allotment until soils are dry enough to prevent damage to soils/vegetation and when key plants are phenologically ready to be grazed. Range readiness indicators for vegetation are shown below.

Plant Type	Visual	Phenology
GRASS		
Wheatgrass spp.	8 inch plant height	Seed stalk showing
Idaho Fescue	5 inch leave length	Seed head present
Prairie Junegrass	5 inch leave length	Seed head present
Sandberg bluegrass	Plant mature	Seed head in dough stage
Pinegrass	4-6 inch leaves	
Tufted hairgrass	6+ inch height	Seed head present
Kentucky bluegrass		Seed head present
GRASSLIKE		
Nebraska sedge		Seed in late dough
FORBS		
Western Yarrow	Flower stalk showing	
Arrowleaf Balsamroot	$\frac{3}{4}$ leaf development	Blossom beginning
Geranium	4 inch leave length	Flower in bloom
SHRUBS		
Serviceberry		Blossom present
Antelope Bitterbrush		Flower bud swollen
Snowberry		7-8 bud leaves unfolded

**COTTONWOOD CREEK ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 5th. Situations may develop during the grazing season in which changes may be required to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. You must continue to meet all the **Eligibility Requirements** set forth to qualify for this permit, including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. The bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

Permittee

Kunzler Sheep & Cattle

Authorized Number

1200 ewe/lamb

Season of Use

7/11 – 9/15

Order	Unit	No. of Days	Planned Dates
1 st	Dry Creek	17	7/11 – 7/27
2 nd	Red Top	17	7/28 – 8/13
3 rd	Trail Fork	19	8/14 – 9/1
4 th	South Unit	10	9/2 – 9/11
Trail off		3	9/12 – 9/15

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Proper Use Criteria is ≤50% of key forage species and ≥4" residual stubble height of graminoids along the greenline.

Livestock will enter the allotment via the Dry Creek Road and will be off-loaded directly onto the allotment. Livestock will trail off the allotment to Poker Hollow where they will be shipped via the Smiths Fork Road.

When road conditions become unpassable due to weather conditions, sheep may be trailed to the parking lot at the head of the Smiths Fork Road to be shipped.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual units being grazed may occur where lack of clear geographic boundary or other marker is not present. Every effort should be

made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter the bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported the same day they occur or as soon as possible thereafter. Reports to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(s). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses, plus the number that exits. Any differences to result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding to avoid soil displacement and overgrazing.
- Once-over-lightly grazing. Graze rather than trail to water, and do not water at the same location multiple times.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).

- Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction, and allotment management plan.
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat, and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying of trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers, and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be Highline, picketed and hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs immediately contact Brad and let him know what has been done to alleviate the situation
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

Permittee	Dustin and Daniel Erickson
Kind	Cattle
Class	<i>Cow/Calf</i>
Numbers	<i>141</i>
Season of Use	<i>June 17 – July 11</i>
Non-use	

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Not to graze outside of permitted season and not to exceed 25 days.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance to the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual areas being grazed may occur where units are adjacent to each other and where a clear geographic boundary or other marker is not present.

Management Direction

- There will be enough riders to achieve proper distribution of livestock within the allotment. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.

- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas.
- Proper Use Criteria is $\leq 50\%$ of key forage species and $\geq 4''$ residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization means it is time to move into the next scheduled unit or to come home early.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway, or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, and Musk Thistle as you come across it in your permitted activities.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

**CORRAL CREEK ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 18th. Situations may develop during the grazing season in which changes may be required to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. You must continue to meet all the **eligibility requirements** set forth to qualify for this permit including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. Bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

<u>Permittee</u>	<u>Allotment</u>	<u>Authorized Number</u>	<u>Season of Use</u>
Child Ranch LLC	Corral Creek	1200 ewe/lamb 5 Horses	7/20-9/15 7/20-9/15

Table 1 – Corral Creek Allotment – Proposed Grazing Schedule and Proper Use Criteria¹

Order	Unit	No. of Days	Planned Dates
Trailing on		2	7/20 – 7/21
1st	Upper Dick Creek	9	7/22 – 7/30
2nd	Corral Creek	20	7/31 – 8/19
4 th	North Corral Creek	10	8/20 -8/29
5 th	South Corral Creek	15	8/30 -9/13
Trailing off		2	9/14 – 9/15

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas that are most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Proper Use Criteria is ≤50% of key forage species and ≥4" residual stubble height of graminoids along the greenline.

Trail-on: Sheep trail up the Smith's Fork onto N.F. lands avoiding sheep pass (east of sheep pass) and onto the allotment. This typically takes 1 day. Trail off: Sheep are trailed to the north end of the allotment to the Big Greys Road (South end of Forest Park) where they are directly shipped home. This will take two days trailing from allotment with one overnight between Broad Canyon and Ridge Creek and one Overnight in corrals at Forest Park.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension

and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual units being grazed may occur where lack of clear geographic boundary or other marker is not present. Every effort should be made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported on the same day they occur or as soon as possible thereafter. Reports to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(s). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses, plus the number that exits. Any differences to result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding to avoid soil displacement and overgrazing.
- Once-over-light grazing. Graze rather than trail to water and do not water at the same location multiple times.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days' use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.
- Salt can be used to improve livestock distribution within the allotment.

- All salting will be done away from key forage use areas and traditional livestock congregating areas.
- Prior to an area reaching the forage use standard, all salt will be removed.
- Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).
- Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
- Salt will be placed on rock or hardened areas.
- Salting areas should be rotated from year to year.
- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction and allotment management plan.
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat, and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers, and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be Highline, picketed and hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs in the wrong unit to be grazed, immediately contact Brad, and let him know what has been done to alleviate the situation.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

**CEDAR CREEK ALLOTMENT
2026 ANNUAL OPERATING INSTRUCTIONS**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 11, 2026. Situations may develop during the grazing season in which it requires changes to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. **You must continue to meet all the eligibility requirements** set forth to qualify for this permit, including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. Bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

Table 1.0 Cedar Creek Allotment – Permitted/Authorized Grazing Numbers, Kind, Class, & Season of Use

Permittee	Russell & Evelyn Stuart
Kind	Cattle
Class	Cow/Calf
Numbers	6 on 32 off
Season of Use	June 1 - Oct 10
Non-use	0

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being reach prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of term grazing permit Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.

Management Direction

- There will be enough riders to achieve proper distribution of livestock within the allotment. Livestock will not be turned onto the allotment or allowed to congregate within any portion of the allotment for an extended period that creates areas of inappropriate forage utilization. Every effort must be taken to completely remove cattle off the National Forest by the scheduled off date.
- Place cattle across the unit to be grazed in numerous small groups rather than a few larger groups. This practice greatly reduces undesirable impacts of cattle grazing across the allotment and particularly within key areas.
- Proper Use Criteria is $\leq 50\%$ of key forage species and $\geq 4''$ residual stubble height of graminoids along the greenline (i.e. stream corridors and wet meadows). Any area reaching proper utilization

means it is time to move into the next scheduled unit or to come home early. Equal utilization of the range is the objective. Corrective measures will occur if inspections reveal areas of over utilization, riparian damage, or other damage. These corrective measures may result in livestock being removed from National Forest lands and action taken against term grazing permit.

- Certified weed-free hay, cubes, and straw are required on the Forest.
- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax, and Leafy Spurge. Please pull Spotted Knapweed and Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittee's responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs or cattle were in the wrong unit to be grazed, immediately contact Brad, and let him know what has been done to alleviate the situation.
- Ensure you take every reasonable effort to ensure all cattle are removed by and do not return to National Forest lands after the off date.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

Maintenance of all your improvements listed in Part 3 of the Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.

**2026 ANNUAL OPERATING INSTRUCTIONS
Bear Creek (excluding Upper Cabin Unit), Virginia Peak (Portions of South Unit), and
Three Forks (Upper Basin Unit only)**

These Annual Operating Instructions are made part of your term grazing permit consistent with Part 1, Item 3 and Part 2, Item 8(a). It refers to the meeting held on March 18th. Situations may develop during the grazing season in which changes may be required to these instructions, prior approval must be given before initiating any changes or deviating from these instructions. You must continue to meet all the **eligibility requirements** set forth to qualify for this permit including those related to base property and livestock ownership. Do not make changes to these items without first consulting Brad Jacobson.

Only livestock branded according to the Certificate of Brand Registrations provided to the Forest Service will be allowed to graze on the allotment. The bill for collection will be paid by due date. Not paying by the due date may result in administrative and interest charges. Placing livestock on the allotment prior to payment is non-compliance with Part 2, item 3 of the grazing permit. Confirmation of payment by the Forest Service must be received before livestock will be allowed to graze on National Forest lands.

<u>Permittee</u>	<u>Allotment</u>	<u>Authorized Numb</u>	<u>Season of Use</u>
Child Ranch LLC	Bear Creek	1200 ewe/lamb	7/6 – 7/29
		1200 ewe/lamb	8/10 – 8/24
	Virginia Peak	1200 ewe/lamb	7/30 – 8/9
	Three Forks	1200 ewe/lamb	8/25 – 9/15
		6 horses	7/6 – 9/15

**Bear Creek Allotment (Dry Canyon & Mt. Dougal units) and Virginia Peak Allotment (South Unit):
Proposed Grazing Schedule and Proper Use Criteria¹**

Order	Unit	No. of Days	Planned Dates
1	Bear Creek – Mt. Dougal unit (Willow Cr.)	10	7/6 – 7/15
2	Bear Creek – Dry Canyon unit	14	7/16 – 7/29
3	Virginia Peak – South unit (Strawberry)	11	7/30 – 8/9
4	Bear Creek – Mt. Dougal unit	15	8/10 – 8/24
5	Three Forks – Upper Basin unit	20	8/25 – 9/13
Trail off		2	9/14 – 9/15

¹Dates are estimates and may vary based upon range readiness, drought, proper use criteria being met prior to the proposed move date, and/or other factors. Utilization will be monitored at key areas of the allotment. Key areas are those areas most preferred by livestock, are typically grazed first, and receive the most concentrated use. They are also representative of management across the allotment. Proper Use Criteria is ≤50% of key forage species and ≥4" residual stubble height of graminoids along the greenline.

Permitted livestock for the Bear Creek allotment will be trucked to the allotment via the Willow creek RD #10080 to be unloaded and moved directly onto the allotment. Trail off National Forest lands via the Smiths Fork Road on or before September 15th. All livestock are to be off National Forest lands by the 15th of September.

You are directed to coordinate with Brad prior to turning any livestock onto National Forest lands. Failure to receive approval prior to turning livestock onto National Forest lands will result in non-compliance with the terms and conditions of your Term Grazing Permit and may result in a suspension and/or termination of the term grazing permit. Please notify Brad when your assigned range improvements have been maintained so that they may be inspected prior to turn-on.

An allotment map is enclosed; this map shows the allotment boundary, unit boundaries, and scheduled move dates. Some variation between units prescribed for grazing and actual units being grazed may occur where lack of clear geographic boundary or other marker is not present. Every effort should be made to ensure sheep are in the appropriate unit to be grazed at the prescribed time. You are authorized to vary the number of days between unit moves by three days either way. Prior approval must first be received if the need arises to vary the number of days by more than this.

Domestic Sheep & Big Horn Sheep Best Management Practices (BMPs):

The following management practices are designed to limit livestock losses and interactions between domestic and bighorn sheep. They are consistent with the Final Report and Recommendations from the Wyoming State-wide Bighorn/Domestic Sheep Interaction Working Group.

- Do not turn out sick or diseased domestic sheep onto the grazing allotment/trailing route(s). Any domestic sheep which becomes ill while grazing on the allotment should be promptly treated to ensure it does not infect other animals.
- Do not allow contact between domestic and bighorn sheep. If bighorn sheep are sighted in a particular area, then do not enter that area with domestic sheep. As necessary promptly move your domestic sheep to an area where they will not encounter bighorn sheep. Contact the Authorized Forest Officer to adjust the grazing rotation.
- Promptly report all sightings of bighorn sheep during the grazing season to the Wyoming Game & Fish Department and the local USFS Ranger District. Sightings should be reported on the same day they occur or as soon as possible thereafter. Reports to include number of bighorn sheep observed, sex of animals (if it can be determined), location, and distance from domestic sheep.
- All livestock losses are to be reported each year using an Actual Use Record provided by the Authorized Forest Officer. Report the number of livestock lost and the reason(s) (cause of death) for the loss(s). If the cause of death is unknown or the carcass(s) is not found, this information should be included in the Actual Use Record.
- All domestic sheep are to be counted upon exiting the National Forest. This will ensure all domestic sheep are accounted for when exiting the allotment and trailing routes. The number of sheep that entered the National Forest should equal the recorded livestock losses, plus the number that exits. Any differences to result in further riding/searching for any potential stray sheep.
- If you are missing domestic sheep upon exiting the National Forest, re-ride the allotment and trailing routes and remove any sheep found.

Sheep Herding Standards:

- Practice open or loose herding to avoid soil displacement and overgrazing.
- Once-over-light grazing. Graze rather than trail to water, and do not water at the same location multiple times.
- Route sheep to avoid steep slopes with loose soil, snowbank areas, and active rills or gullies.
- Bed sheep one night in one area only. Multiple days' use of the same bed ground is prohibited.
- Do not bed sheep within 200 yards of designated campgrounds, recreation trails, trailheads, maintained roads, immediately adjacent to streams or other waterbodies.
- No shading or bedding within 100 yards of all streams and riparian areas.

- Salt can be used to improve livestock distribution within the allotment.
 - All salting will be done away from key forage use areas and traditional livestock congregating areas.
 - Prior to an area reaching the forage use standard, all salt will be removed.
 - Old established salt grounds should not be used except for those areas which are highly resistant to salting (i.e. rocky and/or hardened areas resistant to salt leaching and ground disturbance).
 - Salt will be placed at least 300 feet off roads and trails and at least 1,500 feet from all water sources, wetlands, riparian areas (when feasible), and developed recreational/camping sites except as approved by the Forest Officer in Charge.
 - Salt will be placed on rock or hardened areas.
 - Salting areas should be rotated from year to year.
- Clean and repair all roads and trails to the condition prior to sheep impacts.

Management Direction

- The permittee will ensure that all personnel performing on the ground livestock management are thoroughly familiar with the terms of the grazing permit, annual operating instruction, and allotment management plan.
- All camp sites used in conjunction with livestock operations must be maintained to have a clean, neat, and orderly appearance.
 - Facilities authorized on a permanent basis must always be kept clean during and after use.
 - All camps must have a serviceable axe and shovel for fire control.
 - You are encouraged to follow Order Number 04-00-104 as it relates to the management of your livestock on this allotment (see attached order).
 - Burying trash is not allowed. All trash will be removed from the National Forest.
 - Temporary holding pens, corrals, mangers, and hitching racks will be removed when the camp is moved or relocated.
 - Horses and mules used in conjunction with this permit will not be Highline, picketed and hobbled in a manner that creates trampled vegetation and compacted soils.
- All predator control will be in accordance with State and Federal Laws. Black and Grizzly bear, wolf, and lion predation should be reported to the Wyoming Game & Fish Dept., and coyote predation reported to the USDA-APHIS office.
- Dead livestock within 300 feet of any live stream, spring, roadway, or trail will be promptly removed and properly disposed of. Proper disposal would include removal of the carcass off the allotment or dragging the carcass at least 300 feet away from any live stream, spring, roadway, or trail.
- Please inform Range Specialist of new noxious weed infestations. Noxious weeds of concern in the allotment are: Spotted Knapweed, Musk Thistle, Canada Thistle, Hound's Tongue, Dalmatian Toadflax and Leafy Spurge. Please pull Dyer's Woad, Spotted Knapweed, Musk Thistle as you come across it in your permitted activities.
- Unauthorized use is each permittees' responsibility to ensure their livestock are within the correct allotment and unit to be grazed. If any unauthorized use occurs in the wrong unit to be grazed, immediately contact Brad and let him know what has been done to alleviate the situation.
- If there have been approved changes or if there are specific items you want to discuss at next year's annual permittee meeting, complete the actual use report and return it by November 30th. Please contact Brad Jacobson at 307-886-5331 (W) or 307-248-2344 (C) if you have any questions or comments. Thanks for your cooperation in managing this allotment.

Maintenance:

- Maintenance of all your improvements listed in Part 3 of Term Grazing Permit will be completed at least one week prior to the proposed-on date. This allows time for the inspection of improvements and any potential concerns to be addressed before livestock enter the allotment. *If maintenance responsibilities have not been completed to the standard they were initially constructed, or if reconstructed, to the standards listed in permit, livestock will not be allowed to enter National Forest lands.* All labor and materials needed for maintenance are your responsibility.
