

Appendix D

Wildlife and Aquatic Species Assessment

Terrestrial and Riparian Wildlife Species

This Appendix D ties together the information discussed in Chapter 4 Resource Questions TW 1 through TW 4 into a spreadsheet to display the relationship between roads on the RGNF and terrestrial and riparian wildlife species. Specifically, the spreadsheet focuses upon 1) potential population fragmentation and disturbance associated with individual roads within hydrological units 2) roads passing through deer and elk winter range 3) roads located within identified lynx linkage areas 4) roads in areas providing habitat for TES/MIS species and 5) the percentages of individual roads located within 200 feet of riparian areas.

Potential Population Fragmentation and Disturbance Risk.

The road density within each Hydrological Unit Code or HUC (6th level watersheds) was determined by dividing the square miles of each HUC by the total miles of road contained in each HUC. Each individual road contained within the HUC was then assigned a number in the spreadsheet (1-3) depending upon the road density of each HUC. A “1” designation means the particular road contributes to a low road density within the HUC, a “2” designation means the particular road contributes to a medium road density within the HUC and a “3” designation means the particular road contributes to a high road density within the HUC.

Road Density Value

< .50 mi/mi² = 1 (Low Road Density)

>/.50-.1.00 mi/mi² = 2 (Medium Road Density)

> 1.00 mi/mi² = 3 (High Road Density)

Deer and Elk Winter Range.

Roads passing through deer or elk winter range were assigned a rating of “1” in the spreadsheet.

Lynx Linkage Areas.

Roads passing through lynx linkage areas were assigned a rating of “1” in the spreadsheet.

TES / MIS Nest or Den Sites.

Roads within ½ mile of known nest or den sites were assigned a rating of “1”. (Collecting and maintaining this information is useful to managers to help conserve these species and is usually not in the best interest of the species for this information to be widely distributed. For this reason, the specific locations and identification of the species are not displayed in the spreadsheet. Adding additional TES/MIS information into the GIS database as it becomes available and overlaying those sites into the Roads Database will be an on-going project.

Percentage of individual roads within 200 feet of riparian areas.

For this analysis, a buffer of 200 feet around every riparian area was created. Each road segment within this buffer was then identified and displayed as a percentage of the entire road length. Each road was then given a

value. A value of “1” means the particular road has a relatively small percentage of its entire length within 200 feet of a riparian area. A value of “2” means the particular road has a medium percentage of its entire length within 200 feet of a riparian area and a value of “3” means the road has a relatively high percentage of its entire length within 200 feet of riparian area.

Road Riparian Value - Percent of Total Road Length Within Riparian

0-25% = 1 (Low Riparian Rating)

26-50% = 2 (Moderate Riparian Rating)

51-100% = 3 (High Riparian Rating)

Overall Risk Rating.

The total of the rating numbers for the 5 columns are summarized in Table D-1 to demonstrate the overall relative potential of each road to impact terrestrial and riparian wildlife. The higher the overall number, the higher the potential and the higher the need to assess and mitigate for wildlife impacts. The maximum number of points is nine.

The following scale is used to determine the overall wildlife risk for each individual road. Appendix C, Road Matrix, assigns a rating of 1-3 to each specific resource. For purposes of that matrix, the following system is utilized:

1-3 points in the Wildlife Table D-1 = Low Concern = Rating 1 in Appendix C

4-6 points in the Wildlife Table D-1 = Medium Concern = Rating 2 in Appendix C

7-9 points in the Wildlife Table D-1 = High Concern = Rating 3 in Appendix C

Table D-1. Terrestrial and Riparian Wildlife Species Concern Ratings by Specified Road.

Road Number	Road Name	Length (miles)	Ranger District	Functional Service	Potential Fragmentation and Disturbance Concern	Deer and Elk Winter Range Rating	Lynx Linkage Area Rating	TES/MIS Rating (nest /den site)	Riparian Rating (Within 200 feet)	Total Concern Points
100	King	5.42	Conejos Peak	Collector	3				1	4
