

APPENDIX E

APPENDIX E

ALLOCATION OF CAPABILITY AREAS TO MANAGEMENT AREAS

The Forest has been subdivided into map units for analysis purposes based on homogeneity with respect to environmental characteristics such as vegetation, soils, and slopes. Geographic areas were delineated first to identify areas of political, social, and administrative differentiation. Next, ecological units were identified with respect to potential natural vegetation, the soil and landform type, and unique legal or administrative identifier or number. The geographic and ecological delineations were then combined to identify capability areas. Criteria and coding for the various identifiers are contained in Planning Action 2, Planning Criteria, Pike and San Isabel National Forests, June, 1981.

The management emphasis as shown in the Forest Plan and described in Chapter III, Management Direction, is applied to the capability areas as listed below. Management area delineations are shown in the Forest Plan map and generally follow capability area boundaries. The capability areas are mapped on overlays to USGS 7-1/2 minute topographic quadrangle maps and enable more precise location of management area boundaries. These maps are available for inspection at Ranger District offices and at the Forest Supervisor's headquarters.

Geographic Area	Capability Area Type & I.D.	Number	Management Area
