

Life Stages of the Hemlock Woolly Adelgid in the Northern Range

HWA woolly masses
(March– June)

Following hatch, woolly masses can remain on twigs throughout the year and often appear tattered and dirty

HWA woolly masses and crawlers
(March – June)

HWA nymphs in summer aestivation
(June – September)

2nd – 4th instar nymphs begin forming white flocculence as they mature
(September – February)

Note: HWA has 2 generations per year. Time frame of each life stage often overlaps.
