Comments:

My name is Angie F. and I live in New Brunswick, New Jersey.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Angie F.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, K f

HC895

Dear Secretary Perdue,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

Comments:

The removal of Clinton's roadless rule will contribute to the destruction of our planet. The roots of the trees hold the soil together, therefore when they're demolished, the soil will erode and the nutrients won't stay in the soil. The biodiversity will be affected and since the food webs are interconnected, many species will be displaced and have to find another source of food. This policy only benefits the dying logging industry, but at the same time, will impact Alaska's only thriving commodity, salmon. I'm tired of old legislators making laws that will negatively impact future generations to pursue their own personal interests. Climate change is a real issue, and I'm tired of policies like the green new deal being put on the backburner so policies like this can be considered.

Pristine, healthy, alive, old-growth, and intact National Forests are of vital importance to Our spiritual well-being, in addition to Our mental health and physical survival. Our National Forests are sacred and beloved to us for their wild beauty, peaceful environment, and the psychological/spiritual nourishment and solace they provide. In particular, the ancient and old-growth trees of Our National Forests are precious and irreplaceable and so must be kept alive and protected in perpetuity. Keeping Our National Forests alive, unspoiled, and intact holds immense cultural, spiritual, and aesthetic value. We will the U.S. Forest Service to fulfill its true purpose: "Caring for the Land" means keeping Our National Forests actually forested, alive, healthy, pristine, wild, and intact. That is how We truly serve Ourselves, i.e. "Caring for the land and serving people."

We will the USDA and the U.S. Forest Service to select the "No Action" Alternative (Alternative 1) and uphold the Roadless Area Conservation Rule. Keep the Tongass National Forest (along with other irreplaceable and ancient forests) unspoiled, alive, protected, and intact.

P.S. We are including a weblink to a video entitled: "Breathe" Defending the Tongass National Forest

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Peter F. Schultz

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Megan Faber

Comments:

My name is Megan Faber and I live in Denver, Colorado.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

Temperate old growth forest is entirely too precious to cut. We didn't know better when we cut the chestnut of Pennsylvania, the pines of Wisconsin, and the redwoods of California. But now, in an era of diminishing unique ecosystems, there can be no rationale to allow intrusion into this unique area. Look to our Canadian neighbors, and how they have protected the coastal old growth of BC. Please, enough is enough, consider our grandchildren.

Michael Faber

Essex Vermont.

Sincerely,

Michael Faber

Comments:

I am writing in strong support of full exemption of the Tongass from the Roadless rule. The Forest service allowing this rule to take affect in the 90's and the continued political football the Tongass has been without the due diligence to review all economic impacts to the region that is and has occurred since the implementation of the road less rule has been reckless and detrimental to the region. Exempting the Tongass from the roadless rule will not bring death and destruction to wilderness and wildlife as the opponents of the exemption exaggerate and distort as they continue to disseminate misinformation to build hysteria while continuing to line their financial coffers preying on sympathetic individuals around the world that do not even live in the region. The continued economic impact of the roadless rule has seen the timber industry die, the Ferry system die and people leave the region. The Ferry system is on it's last legs due to declining population and ridership from the political uncertainty that the roadless rule has created through the past few decades. If the roadless rule were to be eliminated or the Tongass granted the full exemption, it would allow for renewable energy sites to be developed, world class mineral development with some of the safest and modern mining practices in the world to be developed, road access through areas to allow economic growth of the effected communities, electrical inter-ties and roads allowing the strengths of many communities tied together creating a stronger region of economic sustainability, reducing the cost of living and allow Southeast Alaska towns and Villages to have a clear path forward for building a sustainable economy. The opponents of full exemption do not want communities to work together, and actively visit the various villages and towns pitting them against each other and feed them misinformation on what the roadless rule exemption would allow and not allow in regards to all the other forest rules that remain in effect.

Please support the full exemption of the Tongass from the arcane Roadless rule.

Thank you for considering my comments.

HC4889

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

First name: Roxanne

Last name: Factor

Organization:

Title:

Comments:

My name is Roxanne Factor and I live in Wilson, WY. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I live in a beautiful natural area and I know how precious and fragile wilderness is. Short sighted actions like opening more wilderness to roads and clear cutting may benefit a few now, but can cause irreparable damage for the future.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes.

Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Toni Fader

Comments:

My name is Dirk Faegre and I live in Belfast, Maine.

I believe that clear cutting Alaska forests is an exceptionally poor idea. We should have put this technique behind us years ago. But more importantly, in this time of climate change with the sequestration of CO2 needed, clear cutting is just reprehensible. Don't do it.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

Comments:

I write today in support of the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. The president's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I object in the strongest possible terms to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Dirk Faegre

HC6095

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

Yes No

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

To Whom it may concern,

My name is Breanna Fahrenholz and I am a Sophomore at Northeast Community College in Norfolk, Ne. I am writing this letter regarding the possibilities of the government opening protected land to the public and preparing it for deforestation.

I am writing in opposition to this act. By opening up the protected land to the public to use for deforestation and public uses it sets a precedent for the future, meaning is sometime in the future we need more land the law that protects the land will become weaker with each piece of protected land we give up. It begins to put us on a slippery slope.

Not only will it demote the governments word in the future, but it will also decrease the amount of wildlife, diverse habitats, and spawning habits of fish. Each one of these is a domino in action and once one domino begins to fall it starts to create a dangerous rippling effect. We saw this effect when they took the wolves out of Yellowstone National Park. We need to learn from our past mistakes and make them better, instead of repeating them.

Not only will it destroy the diversity of the animals, but it will also destroy the beautiful landscape that people come to see and explore in. This will take away multiple people jobs as well, as many who work for this national forest, are rangers, scientist, and guides to the public. If we take the land we are using for tours, hunting, and fishing that is a huge income loss that could greatly impact the economy.

Now there are some logging companies that take care in cutting the trees down and trying to preserve the land but in most times, it is not the case. The more careful you are, the more time it takes, and the more time it takes the more money it costs. Due to the rising cost of logging in general, no company is going to want to take more time and more money to do it.

This national forest is close to many estuaries and has a unique biome. The estuaries are very important to the spawning of fish and are becoming even more important due to the growth of dams that are being used for electricity. The dams ruin the estuaries and spawning process of the fish because the streams are flowing faster and deeper, making it very difficult to lay eggs, and for them to survive. As for the unique biome it is a temperate biome but also gets a lot of rainfall, so it is not completely a temperate are but is not completely a rainforest either.

Thinking long and short term it would be pointless to open this protected land to the public and logging companies. Short term we will get a lot of money from the logging we will obtain from tearing down this national forest, but if we think about the long-term effect is it worth it. Long term the ground will get less nutritional and will eventually become barren, whereas if we just leave the forest alone it will make a lot of money with the hunting, lodgings, and tourist fees it intakes year round.

Please keep all these points into consideration before deciding to tear down one of the largest, most protected National Forest around.

Sincerely,

Breanna Fahrenholz

Comments:

My name is Gill Fahrenwald and I live in Olympia, Washington.

Greed, and the Republicans who enable it, are going to kill us all.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Gill Fahrenwald

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Rita Fahrner

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on. Furthermore, intact, ancient forests are strongholds of climate resilience, and the Tongass is one of world's largest.

REMEMBER THE AMAZON RAINFOREST! WE REALLY DO NEED THE OXYGEN! Especially to breathe and also to feed the boilers whose steam generates the electricity that brought you this message!

Sincerely,

Sam Fairchild

Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Comments:

My name is Richard Fairfield and I live in Santa Rosa, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Richard Fairfield

Protect the Tongas and all our forests. They are vital to our environment and our survival.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Judy Fairless

Alaska Roadless Rule

The Honorable Sonny Perdue, Secretary, United States Department of Agriculture

David E. Schmid, Regional Forester, USDA Forest Service, Alaska Region

Dear Secretary Perdue, and Mr. Schmid:

I wish to express my opposition to any modification to the Roadless Rule in Alaska. The changes that have been proposed would facilitate increased old-growth logging in the Tongass and Chugach National Forests, permitting landscape fragmentation, endangering wildlife habitat and risking access to safe drinking water.

There is strong agreement among scientists that clear cutting of old growth trees for timber puts whole systems at risk and destroys wildlife habitats, yet the Forest Service's amendment to the Tongass plan allows clearcutting to continue for in excess of another ten years. The Tongass and Chugach forests play a vital role in capturing excess carbon from the atmosphere. Alaska experienced unprecedented heat waves this summer and the Tongass serves as a buffer against climate change. Much like the Amazon rainforest, the Tongass' stands of ancient trees are champions at absorbing greenhouse gas emissions, storing approximately 8 percent of the total carbon in all national forests of the lower 48 states.

The Tongass National Forest is home to more than 9 million acres of roadless area. The Roadless Rule protects ecosystems, which, in turn, helps make the Tongass the country's single most important national forest for carbon sequestration and climate change mitigation.

Please do not grant any exemptions or exceptions to the Roadless Rule in Alaska, as is offered in alternative 1, and advise the Forest Service to refrain from pursuing an Alaska version of the Roadless Rule. I urge you instead to continue to uphold the 2001 Roadless Area Conservation Rule, maintaining protections against logging and roadbuilding in Tongass roadless areas.

The agency's mission is "Caring for the Land and Serving the People." The Forest Service should strive to protect the Tongass National Forest and ensure our public lands serve the people and wildlife of today and future generations.

Thank you for your attention.

Susan Fairweather.

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Steve La Falce

Flagstaff, AZ 86004

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Lisa Falk and I live in Tucson, AZ. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

We must keep one of the few true wildernesses protected from human encroachment. We need the carbon offset from all the trees. We need a sense of the wild preserved for our childrens children. Dont be greedy. Protect this place. No roads.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and

focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

My name is Susan Falk and I live in Anchorage, Alaska.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Susan Falk

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Jenna Fallaw

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, James Falsken

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

HC426

Dear Roadless Rule Planning Team,

The health of the Tongass National Forest is important to me. I depend on the Tongass which is a unique and global treasure.

The freshwater streams where salmon and old growth forest of the Tongass provide spawning habitat for these fish, which in turn feed a matrix of bears, birds, insects, and other wildlife that Alaska is so famous for. The health of our economy, which is heavily dependent on the fishing and tourism industries, also depends on the salmon, wildlife and presence of old growth forests. A sustainable future for Southeast Alaska requires protecting expansive areas of intact habitat - in short, it requires keeping our Roadless areas roadless! I urge the Forest Service and the Secretary to protect important salmon spawning habitat, maintain old growth forests for winter deer habitat, and keep the places I like to recreate free of clearcuts and roadbuilding.

WHO I AM: [text bolded for emphasis] Include your name, where you live, and any relevant biographical information. Do you live or work on the Tongass National Forest? What is your relationship to the Tongass?

Nick Fama / Thorne Bay, AK

PREFERRED ALTERNATIVE: [text bolded for emphasis] The Forest Service will choose how to proceed from a number of different alternatives. If you want the Roadless Rule to remain on the Tongass, write "No Action."

WHY I PREFER THIS ALTERNATIVE: [text bolded for emphasis] How would this alternative affect you and Southeast Alaskans?

AREAS: [text bolded for emphasis] Are there specific islands, watersheds, or mountains that you depend on? Name the most important areas that the Roadless Rule to protect. Examples include the Tenakee Inlet, Nakwasina Sound, Fish Bay, Ushk Bay, Northern Prince of Wales, T77 salmon watershed areas, Audobon TNC ecological priority areas, etc.

Do not log near Thorne River or on Honker Divide Route.

USE: [text bolded for emphasis] What activities do you use the Tongass National Forest for? Hunting, fishing, recreation, subsistence, business, tourism, etc.

Thorne River is popular recreation area and great wild salmon run. I commercial fish and target hatchery fish to preserve these wild runs.

SUGGESTION: [text bolded for emphasis] How should the Forest Service manage the Tongass National Forest, rather than old-growth clearcut logging? More sustainable alternatives to timber harvest include salmon watershed restoration, visitor industry infrastructure, deer habitat enhancement, young growth thinning, and maintenance of recreation infrastructure such as trails and cabins.

Additional comments for the Forest Service:

Sincerely,

Nick Fama

I do not want to receive a copy of the Draft Environmental Statement

Comments:

To whom it may concern,

Although I may not be a resident of Alaska, nor fully comprehend the logging industry, I would like to voice my objection to any proposal that might enable logging companies to remove old growth timber. This practice is not sustainable, and it is rather unconscionable in a day and age when we have made advancements in building technology such that old growth is not necessary whatsoever.

If Alaska wishes to renew their industry, why not invest into other areas of lumber-related technology, such as production of Cross-Laminated timber, Glu-Lam, OSB, or SIP panels - all of which are becoming more heavily utilized in the construction industry.

Returning to the practice of cutting down majestic, 1000 year-old trees feels like a step backwards, like a return to coal when we have so many other means of generating energy. Please consider my input as someone who is concerned with both the economic and ecological futures of our nation. I long to visit Alaska some day before I die, and I hope that there are ample untouched old-growth forests for me to explore.

Thank you for your time,

Aubrey Fan

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Cynthia Fan

I support maintaining the Roadless Rule for the Tongass! The Tongass rain forest is vitally important to the world acting as a carbon sink. Maintaining natural habitat for wildlife helps support Alaska's visitor and seafood industries, both are vitally important to Alaska's economy. But I believe some things can't have a price put on them, they are worth more than we will ever be able to monetize, and the Tongass is one of them.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Barbara Fant

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Trees = oxygen, plus they sequester carbon. Worldwide , instead of increasing the size of forests as promised by international agreement some years ago, we have actually substantially reduced the size of our forests. Who reap the benefits of yet another national resource? Makers of toilet paper! Or worse yet we are selling these trees to foreign interests . Who benefits? Not the American people, not our environment, not the inhabitants of these forests, but corporate interests. This is morally and ethically wrong, not to mention a factor which is directly contributing to global warming, ocean acidification, and environmental degradation.

HC5232

U.S. Forest Service Alaska Roadless Rule Committee:

I have had the privilege of fishing in the Bristol Bay area and later vacationing with my wife in Wrangell. Please respect the natural beauty of your land and hear the voices of the native people who live on, and off of, the land.

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for more than 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Larry Farin

Save Ancient Forests in Alaska

To Whom it May Concern,

As an Alaskan resident and a lover of preserving the lands and outdoors, I write to you today about Choosing Alternative One to follow the 2001 Roadless Rule and prohibit road building in the vital Tongass National Forest.

It is as you refer to as "The Crown Jewel" and it's name is well deserving. It's is an important ecosystem for this world, providing carbon storage and a massive salmon fishery. The ramifications about allowing logging, building of roads and various other industries would damage it in ways that will resonate for generations. The Forest is a bastion of what is right about the Forest Service.

Thank you for your consideration.

Very Respectfully,

Edward Farley

Preserve Alaska's Roadless Rule

Greetings:

As a teacher of Environmental Science, I urge you to choose Alternative 1, taking no action and leaving all of Alaska under the 2001 Roadless Rule, including the entire Tongass National Forest.

Our country's old growth forests are a priceless resource. Once they're gone, they can never be replaced. We have a duty to protect our resources for future generations. The temporary economic gain from logging this area would not be worth the long-term price. Clearcutting even part of the Tongass National Forest, as alternatives 2 - 5 propose, could irreparably damage the area's ecosystems. Please consider the following points:

* It has been demonstrated that preserving only part of a forest can put undue pressure on native species, whose territories can be wide-ranging, causing competition for resources among individuals that are forced into smaller areas, even threatening the survival of some species.

* Clearcutting forests in areas with poor soil means regeneration will take longer, since there is less biodiversity among the fungi, insects, and bacteria that live in the soil, due to lack of nutrients. Trees bring scarce nutrients from deep in the earth to the surface, which, together with their own biomass, enriches the soil when they shed their leaves, cones, and dead branches.

* Clearcutting causes soil erosion when the roots of the trees, which hold the soil together, decompose after they die. Depending on the topography of the area (hilly or flat), this can drastically alter the landscape and cause unforeseen damage to nearby ecosystems.

* Forests are one of the major, natural carbon sinks in our battle to curb climate change, which threatens our own survival as a species. Clearcutting a forested area has a two-fold negative effect: 1) The harvested trees are no longer removing carbon dioxide and other pollutants from the air. 2) The decaying root systems and logging debris adds huge quantities of carbon dioxide and methane (both powerful greenhouse gases) to the air through the respiration and digestive processes of the hordes of insects and bacteria that feed on dead plant material in the process of decomposition.

Please consider these points and make a decision for the long-term benefit of our country and our citizens.

Sincerely,

Nancy Farlow

Science Teacher

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Allene Farmer

Comments:

Tongass Alternative 3

I believe option three will best serve the community, as well as adding additional protections to watershed and Audubon lands.

Ideally any timber harvest would open up areas for more eco tourism centered development as well as give native Alaskans the opportunity to benefit from the land once belonging to them.

Comments:

My name is Bonnie Farmer and I live in Alexandria, Virginia.

Oll-growth trees are a treasure in themselves and best never be disturbed. But their presence also supports so many species, and we do not need to put more species at risk. Nature's balance will prevail but it may be a balance we won't like very much if we don't back off from environmental destruction.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Bonnie Farmer

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Title:

Comments:

My name is Katy Farmer and I live in Crater Lake, OR. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

As a wildlife ecologist I value sustainable use, study, and recreation of natural resources. The habitat in the Tongass National Forest needs the preservation that the roadless act would provide.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for the lifestyles of the indigenous communities that the forest supports its status as a national and global treasure, to keep public lands wild for future generations, the high density of incredible wildlife it contains, the recreational opportunities it provides, its status as the largest intact temperate rainforest in the world, its huge swaths of intact ecosystems and all the biodiversity it contains, its wild salmon populations and the world-class fishing opportunities. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), medium-impact recreation (FS cabins, trails, mooring buoys, 3-sided shelters), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, support small-scale, sustainable logging, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes.

Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

HC326

Date: November 4, 2019

Subj: Comments to Proposed Change to Tongass Roadless Rule

I am requesting that the Roadless Rule for the Tongass be kept intact, for the following reasons:

1. As the nation's largest National Forest, the Tongass is a huge natural atmospheric carbon sink, and as such should be kept intact to facilitate the sequestering of carbon dioxide from our atmosphere.
2. The reason I live here in Juneau is the wild Tongass that surrounds us; I don't want to live in a big city, I want to live where I am a small entity in a large natural environment. I regularly visit this wilderness through hikes and boating excursions, and the aesthetic benefits from these incursions are an integral part of my enjoyment of life.
3. Your own analysis states that deleting the Roadless Rule will have no effect on the current levels of logging and sawmill jobs (p. 3-44). So: Why are we doing this process??
4. Repeal of the Tongass Roadless Rule, which has already been rejected by the courts, would jeopardize the existence of these characteristics. Please request Agriculture Secretary Perdue to seek a no action alternative to the current process being proposed.

Title:
Comments:
November 27, 2019

Alaska Roadless Rule USDA Forest Service P.O. Box 21628, Juneau, Alaska 99802-1628

SUBJECT: Alaska Roadless Rule Comments, Docket ID FS-2019-0023

I am writing on behalf of the Izaak Walton League Public Lands Committee and League Alaskan members to express our concerns on the future of unroaded and undeveloped public lands in the Tongass National Forest of Alaska.

The League feels Tongass National Forest is critically important for supporting subsistence and recreational hunting and fishing, as well as the commercial fishing industry in Alaska. The Tongass is also among the world's largest wild salmon-producing regions, contributing nearly 50 million fish to Alaska's multi-billion-dollar commercial salmon industry each year.

The League requests that the Forest Service adopt Alternative 1 the no action alternative in the final (best) rule and that the 2001 Roadless Area Conservation Rule be maintained as the management directive for roadless areas within the Tongass National Forest. It is the best action to preserve the Tongass' fishery and outdoor recreational (economic) value.

If the Forest Service chooses to modify the application of the Roadless Rule on the Tongass, that decision must be balanced and durable, and any new development in roadless areas should be offset with increased conservation measures for the highest-value public lands. One way to achieve this would be to adopt Alternative 2 with modifications, such as adding conservation measures for the T77 and TNC/Audubon Conservation Areas outside of roadless area boundaries, as considered in Alternative 3. Any decision to log or develop those areas must be at the expense of industry using best management practices to minimize impact. With that comes the need for industry to pay for 3rd party verification of its practices. Finally all logging must pay a fair market value to the American taxpayer.

The Izaak Walton League is a nationwide organization of over 40,000 members that are conservation minded individuals promoting sustainable use of our resources and investing in outdoor recreation that all Americans can enjoy. We strongly feel America's public lands are an asset and treasure to be passed onto future generations.

Alaska Roadless Rule
USDA Forest Service
P.O. Box 21628,
Juneau, Alaska 99802-1628

SUBJECT: Alaska Roadless Rule Comments, Docket ID FS-2019-0023

I am writing on behalf of the Izaak Walton League Public Lands Committee and League Alaskan members to express our concerns on the future of unroaded and undeveloped public lands in the Tongass National Forest of Alaska.

The League feels Tongass National Forest is critically important for supporting subsistence and recreational hunting and fishing, as well as the commercial fishing industry in Alaska. The Tongass is also among the world's largest wild salmon-producing regions, contributing nearly 50 million fish to Alaska's multi-billion-dollar commercial salmon industry each year.

The League requests that the Forest Service adopt Alternative 1—the no action alternative—in the final (best) rule and that the 2001 Roadless Area Conservation Rule be maintained as the management directive for roadless areas within the Tongass National Forest. It is the best action to preserve the Tongass' fishery and outdoor recreational (economic) value.

If the Forest Service chooses to modify the application of the Roadless Rule on the Tongass, that decision must be balanced and durable, and any new development in roadless areas should be offset with increased conservation measures for the highest-value public lands. One way to achieve this would be to adopt Alternative 2 with modifications, such as adding conservation measures for the T77 and TNC/Audubon Conservation Areas outside of roadless area boundaries, as considered in Alternative 3. Any decision to log or develop those areas must be at the expense of industry using best management practices to minimize impact. With that comes the need for industry to pay for 3rd party verification of its practices. Finally all logging must pay a fair market value to the American taxpayer.

Comments:

My name is Dorothy Farr and I live in Henderson, Nevada.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Dorothy Farr

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

Our ancient forests are critical to climate resilience. The Tongass is essential to keeping us safe. It is also home to wildlife and the heart of what Roosevelt wanted for America, to preserve our national treasures for future generations.

Our family begs you to select the "No Action" Alternative (Alternative 1). Keep the Roadless Rule intact on the Tongass National Forest.

Sincerely,

Gina Farr

Business interests cannot take preference over preserving our planet. Our lives depend on a healthy planet. We cannot continue to do business as usual and disregard the health of our environment. We need to understand that WE are becoming an endangered species and start protecting our long term future rather than short term business gains.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Roadless Rule comments

Dear Secretary Perdue and Chief Christensen,

I urge you select the "no-action" alternative on the Alaska-specific Roadless Rule and protect all inventoried roadless areas on the Tongass National Forest under the 2001 National Roadless Rule.

The Tongass National Forest holds important value for Alaska and the world. Allowing timber sales and further timber-related infrastructure in roadless areas would irreversibly damage these resources, which include clean water, wildlife habitat, and salmon-producing watersheds. The EIS has not considered the full impacts of such changes to the existing law.

I am a father and am raising my children in Alaska, with much of our year spent in southeast Alaska, where intact forests and healthy, productive coastal waters are our greatest assets. It would be extremely shortsighted to damage these for dubious short-term gains.

I am a homebuilder and rely on wood products in my industry. However, there is no need for logging of old growth forests to acquire quality materials. In fact, opening up roadless areas would be a detriment to Alaska's economy by harming recreational and tourism opportunities, two of the most promising and profitable industries in southeast Alaska. Timber sales on the Tongass have been heavily subsidized, making further logging in this area unsustainable and economically unsound, ultimately applying a burden to American taxpayers.

I strongly request that you select the "no-action" alternative on the Alaska-specific Roadless Rule and keep the 2001 National Roadless Rule on the Tongass.

Sincerely,

Patrick Farrell

HC5549

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

Comment on Tongass Roadless Rule Exemption

Dear Sirs:

On the Tongass Roadless Rule Exemption, take the 'NO ACTION ALTERNATIVE' please. Tourism is huge business (and is still growing) in Southeast Alaska, and a pristine, roadless Tongass is exactly what tourists come here to see and experience.

KEEP the Roadless Rule in its entirety, and KEEP the Tongass roadless with the 'NO ACTION ALTERNATIVE'.

My name is Raymond Farrington and I live in Syracuse, New York.

The science is clear, we need clean air to breathe, We need sensible laws that crack down on air pollution caused by the major polluters in this country.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Raymond Farrington

Comments:

My name is Jean Farris and I live in Orlando, Florida.

DON'T DESTROY OUR WETLANDS;THEY PROTECT US FROM HURRICANES, CLEAN OUR WATER AND KEEP OUR ECOSYSTEMS BALANCED. LETTING THEM BE PROFLIGATELY DESTROYED IS INSANE;YOU MAY AS WELL JUST CUT US OFF FROM THE MAINLAND AND SINK INTO THE OCEAN...IT AMOUNTS TO THE SAME THING!

I am writing to express EXTREMELY strong opposition to OVERWHELMINGLY DESTRUCTIVE efforts to roll back the IMPERATIVE Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to FULLY protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You HAVE NO OTHER CHOICE THAN TO choose the No Action alternative. Any other choice would UNCONSCIONABLY ignore the overwhelming public support and GRAVELY harm Alaskans, including SOVEREIGN Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the EXPENSIVE timber industry, which is less than A MERE 1% of the regional economy.

Any choice but the No Action alternative would also put ECOSYSTEM CRUCIAL wildlife and critical habitat at risk, threaten access to LIFE-SUSTAINING clean water, and be a step in the wrong direction on the climate CRISIS jeopardizing Alaskans at a time when the state already faces severe CLIMATE CRISIS DRIVEN challenges related to HIDEOUSLY rising temperatures. I STRONGLY urge you not to EVER abandon the Roadless Rule in Alaska and instead to put the public interest above corporate GREED by choosing to keep the HIGHLY EFFECTIVE rule PERMANENTLY in place and unchanged.

Thank you for considering my comments.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Johnathan Farris

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

Alaska Roadless Rule Comments

Dear Secretary Perdue and Chief Christensen,

My name is Jeff Farvour, I writing to request that you select Alternative 1, No Action, for the Alaska Specific Roadless Rule. Selecting Alternative 1 is consistent with responsible management of our natural resources that have long had broad support from Southeast Alaskans. Choosing any of the Alternatives 2-6 is not only contrary to the above but would be supporting some of the most wasteful, money losing government efforts documented.

I am a commercial fisherman residing year-round in Sitka, AK of which salmon trolling makes up a bulk of my income. Not only does trolling support my main income, its also very much a way of life that allows folks like my self to live here. Choosing any of the Alternatives 2-6 will have negative consequences on salmon, our fisheries, my livelihood and jeopardize Southeast Alaska's economy.

Of particular concern is the DEIS's grossly misstating and ignoring of the effects that Alternatives will have on commercial fishing. The DEIS has failed on several fronts of which these 3 stand out as particularly erroneous to me:

* The statement in the DEIS that "none of the alternatives are expected to have a significant change to the commercial fishing or fish-processing industries",

* The ungrounded idea that the so called "Tongass 77" (T77) is suitable to protect our salmon fisheries and provide intact salmon forest ecosystems

* The failure to document current trends of southeast Alaska salmon

NEPA requires that an EIS explains to me how potential actions will affect me but the DEIS has failed on these points, making the DEIS not only inaccurate and misleading, but clearly out of step with real world, real life facts that have been substantiated over and over again. Road building for logging, clearcutting old growth and logging in areas that are recovering from previous logging efforts, will and do have negative consequences on our fisheries. That is simply not an argument that is debatable. Because there are salmon troll permits residing in every community in Southeast Alaska, those impacts not only affect me, my primary source of income and my ability to achieve a viable livelihood to support living here, but all of the fisherman, all their families, and all the communities in Southeast Alaska.

"T77" is inadequate

Amongst many things, the T77 is no way suited to protect Southeast's salmon fisheries. For example, the T77 includes only three Prince of Wales island (POW) watersheds whereas POW has 1/3 of the region's 234 most productive salmon streams. Additionally, significant number of the T77 watersheds (upwards of 40%) are not identified by the Alaska Department of Fish and Game as Primary Fish Producers, and vastly underrepresented in the T77 are POW watersheds - the POW-77 Primary Salmon Producers have historically been part of, not only the largest salmon producing island ecosystem in southeast Alaska, but the entire Pacific Coast.

Current Tongass salmon trends

Salmon are experiencing extremely tough environmental challenges, Alternatives 2-6 will clearly exacerbate those challenges and have negative consequences on our fisheries economies. In Southeast, we recently had four salmon runs listed as Stocks of Concern, we've had 2 consecutive years and multi years of record droughts, record low pink runs, coho runs that are below long term and recent averages, in conjunction with

two of the biggest ocean warming events we've ever seen in the Pacific Ocean. Climate affects on salmon are substantial, Alternatives 2-6 will clearly exacerbate those challenges to our fisheries and our forests.

On July 24 the Alaska Department of Fish and Game issued emergency order EO 1S3619. The EO explains that because of extremely low catch rates of troll caught coho in the Southern Inside Waters, that trolling will close for 10 days not only in the Southern Southeast Inside area but the closed waters will extend to the further reaches of U.S waters out to the EEZ. While trollers support this cautionary approach to management of our marine resources, the trollers on that Southern end had no choice but to either quit fishing or move to more Northern areas of Southeast causing more crowding of fishing grounds, spending more fuel and taking more risks in general in what was shaping to be a well below average year for trollers. This was the first time on record that ADF&G was required use this provision since it was was implemented in the 1999 Pacific Salmon Treaty Agreement.

Our commercial fishing industry in Southeast is composed of a mostly rural workforce that is heavily dependent on the Tongass and commercial fishing is Alaska's largest private sector employer. With about 2,700 commercial fishing permit holders and 2,400 crew members living in Southeast, these residents represent over 80% of the active permit holders. This results in more than \$700 million yearly in earnings from commercial fishing and processing jobs.

My ask to you is simple- please choose Alternative 1-No Action, designate the Tongass as a salmon forest and manage it as such and permanently fix streams and culverts from past logging projects.

Sincerely, Jeff Farvour, Sitka AK, F/V Apollo

Comments:

I'm deeply concerned about our continued deforestation practices and the effect of this on accelerating net CO2 emissions, especially in light of 1) the aggressive deforestation policies in Indonesia, Brazil, and other countries, and 2) increased natural wildfires increasing deforestation, and thereby fueling this same process.

As much as I appreciate beautiful wood construction, and I really do, it seems at some point we really should think about our children and their children. The greatest generation sacrificed so much for a better world. Pretty much sucks that we'll be known as the selfish generation for our focus on immediate gratification and the cost of future generations.

None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

My name is [Arline] [Fass] and I live in [Green Valley], [Arizona].

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Arline Fass

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Nancy Fassett

Comments:

My name is patrice faulhammer and I live in Akron, Ohio.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, patrice faulhammer

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

Dear Forest Service Officials,

The proposal to lift the Roadless Rule is a reckless and short-sighted effort designed to benefit very few people in the short term at the long-lasting expense of the vast majority in this country. This will result in a crime against humanity in the form of environmental destruction which cannot be reversed or undone once it has been realized. The enormous and long-lasting costs of these actions will far outweigh the short-term benefits gained by the few who actually benefit. How can a small handful of politicians and logging lobbyists have the power to destroy an ecosystem at the expense of the local people and the people of this nation?

The pristine forests of the Tongass are a source of clean water and contain excellent spawning habitat for salmon. The Tongass Forest is home to some of the few remaining places where salmon populations can thrive in the United States. Logging of old growth forest and mining will have long-term, possibly irreversible effects on the ecosystem. These actions will destroy the remaining spawning habitat for the salmon. The cutting of the trees will help accelerate climate change and will extirpate species obligate to the old growth forests. The resulting erosion will result in loss of clean water and will affect other fisheries. Who will be held accountable when the long-lasting effects of this destruction become evident? Have we not done enough destruction of our environment for the benefit of very few people at the expense of everyone else?

I urge you to do the right thing and keep the Roadless Rule intact. This is not about politics or political parties. Stop reacting to political whims and start thinking about the future of this nation and of this planet.

Concerned Scientist and U.S. Citizen

HC6221

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

The tongass is a place that takes my breath away. The [illegible] ecosystems + wild life would suffer gently if roads were opened to commercial logging.

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

Yes[Text circled] No

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,
Charles Favorite
Isle, MN 56342

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Ann Fawcett

Tongass National Forest

Please reconsider and do not allow logging or any other thing that could be detrimental to this forest. We need this forest.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

My name is Sarah Fawcett and I live in Boerne, Texas.

Stop the destruction of our public lands!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Sarah Fawcett

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

My name is Wendy Fazekas and I live in Branford, CT. I visited Alaska many years ago and it is such a beautiful state. Tongass is America's largest National Forest and home to more than 500 living things per square acre, not to mention the last intact temperate rain-forest in the world. It must be protected. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations.

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. The rule is working fine as it is by balancing the conservation of our fish and wildlife habitat with important development projects. I depend on roadless areas in the Tongass National Forest for healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because I. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries.

Please protect this beautiful forest.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Sandra Fazio

HC3031

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

STOP !

Booooo!

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

December 16, 2019

To whom it may concern:

I am submitting my final comments in support of keeping the Roadless Rule in place for the Tongass National Forest, and specifically for Prince of Wales Island. I have voiced these concerns along with thousands of others supporting roadless protections for what remains of the temperate old growth forests on our continent. At this point in our history we should be enacting greater protections, not fewer.

I came to Prince of Wales Island as a teacher 37 years ago, commercial fished during the summers, and continue to work, recreate and harvest the bounties of the forest and ocean. It is my home. I have participated in hearings and public meetings over TTRA, TLMP, the end of the 50 -year pulp mill contracts, Roadless Rule decisions, local timber sales, and more recently as a member of the POWLLAT.

The decision by Secretary Perdue, favoring total exemption from the Roadless Rule, rather than making an attempt to consider the thousands of comments in support of keeping the Roadless Rule or even the year-long efforts of a state assigned working group seeking an Alaska specific rule is disheartening. But more than this it makes people feel that their voices do not matter, and that participating in the public process is futile and determined by politics not what is best for the forest and the people who live there.

I truly fear the impacts of opening roadless areas to increased old growth timber harvest, road building, and habitat degradation, especially on Prince of Wales Island, which has seen the heavy hand of industrial scale logging for over 5 decades.

Even with the Roadless Rule in place roads are being built on Prince of Wales Island and clearcut logging of old growth is still happening, but at least some critical deer and wildlife habitat will be kept intact with a Roadless Rule in place.

For decades Prince of Wales Island supplied timber for the pulp mills. We have over 1000 miles of roads that carve up habitat and expanses of dark young growth in stem exclusion stage that provide little valuable habitat for deer and other wildlife. For those of us who depend on the remaining old growth to sustain deer and other important wildlife species for future generations, exempting the Tongass and more specifically Prince of Wales Island means continued fragmentation of critical deer habitat, especially critical winter habitat. We are already seeing a decline in the island's deer population.

Old growth habitat has and is being harvested at least on Prince of Wales Island by Mental Health Trust, the University of Alaska, Sealaska, Native village corporations, and State owned forests. These private lands are clearcut and managed for a single use, timber production. More attention should be given to the impacts of these clearcut lands adjacent to public land, and the fragmentation that they create.

Prince of Wales Island has made its sacrifice for the timber industry. Rather than trying to find ways to return the Tongass to the logging practices of the past the Forest Service and the State should be looking to the future, to a more sustainable way of doing business. We should look at the contribution of fishing and the

independent travel industry to the economy of Southeast Alaska. We should promote and foster industries that actually depend on the values of an intact old growth forest, and support small-scale timber sales and selective harvesting practices.

Prince of Wales Island and other rural areas within the Tongass National Forest are different from other regions of the country. We don't want to be compared to Idaho or Colorado to look for ways to care for and manage our public land. Our lives are more connected to and there is a greater reliance upon the fish, wildlife, and plants that we harvest and the habitat they require. I urge the Forest Service, Secretary Perdue, Governor Dunleavy, our Congressional delegation, and President Trump to keep the Roadless Rule protections in place for the Tongass and select the NO ACTION Alternative.

Thank you for the opportunity to make these comments.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Ellen Federman

HC587

Dear Secretary Perdue and Senator Murkowski,

I am currently on a boat cruise off the coast of the West Chichagof-Yakobi Wilderness. The West Chichagof-Yakobi Wilderness was the first citizen-initiated Wilderness area in Alaska; in 1967, Sitkans who recognized the value of this area came together to protect it. This Wilderness area is rich in biodiversity and supports an incredibly productive ecosystem. Salmon are sustained by the vast freshwater stream systems that empty into fjords and inlets. Brown bears feast upon these salmon as they swim upstream, distributing their carcasses throughout the forest. These carcasses fertilize the soil and feed the Sitka spruce, mountain hemlock, and yellow cedar trees that tower over the land. Underneath this old growth canopy, Sitka Black-tail deer browse on abundant berries and shrubs.

However, the West Chichagof-Yakobi Wilderness is not the only place in Southeast Alaska with such incredible beauty and biodiversity. The flora and fauna we find in this wilderness area also thrive in inventoried roadless areas throughout the Tongass. Intact roadless areas provide our communities with important hunting, fishing, foraging, and recreating opportunities. We depend on the entirety of the Tongass for our subsistence and our livelihoods including our commercial fishing and tourism industries. I am grateful for the Wilderness designation that the West Chichagof-Yacobi area received, and would like to see such protections extended to areas such as Ushk Bay and Poison Cove.

Outside of Wilderness areas like West Chichagof, the roadless areas we depend on are threatened by politicians and special interests pushing for short term profits that have long term ecological and economic consequences. Wilderness areas, roadless areas, and the intact habitat they support are an investment in the long term sustainability of our region. Please keep the National Roadless Rule in place on the Tongass. T77 areas are particularly important to me; these watersheds are critical to maintaining the salmon runs we depend on for jobs and food. Please do not remove protections for these areas, or anywhere else on the Tongass.

Personal Comments: I am interested in learning more!

This wilderness means a lot to me as a life-long Sitkan. I would hate to see this area developed and change from the way I have known it when exploring it with my mother and step-father, Jack and Margaret Calvin who fought to make this a wilderness area.

Comments:

My name is Dinah Fedorow and I live in Salem, Oregon.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Dinah Fedorow

HC5085

U.S. Forest Service Alaska Roadless Rule Committee:

For 30 years industry has been trying to get their extraction hands on the Tongass, and for 30 years we've been saying NO. You guys need to get the message. NO means No!!!!

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Gary Fee

Comments:

Over the past five decades our family have traveled the back roads through all forty eight continental states and Alaska. And the one thing that was most disturbing was the very large amounts of clear cutting of trees in those states that had substantial forests eliminating important ecosystems and causing areas of visual desolation.

However in these times of climate chaos events increasing in frequency and intensity the need to keep all forest undisturbed to help minimize these future events.

In addition several years ago scientists reports that their studies had revealed our planet is experiencing its sixth Great Extinction and areas like Tongass National Forest being logged would reduce important numbers of species.

So I and my family request that logging in the Tongass National Forest not be approved now and anytime in the near futures.

Organization:

Title:

Comments:

My name is Emily Fehrenbacher and I live in Anchorage, AK. I like the Tongass I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because It will harm our existing economic drivers. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

My name is Audrey and I live in Missouri

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Audrey Feicht

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

HC3780

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Gary Feimster

Mount Ulla, NC 28125

Comments:

Trumps National Forest Service is using a refuted scientific theory to justify building roads in our countrys largest national forest, what some call Americas Amazon.

The Forest Service says guidelines from the United Nations climate authority would be followed. Two scientists whose research was cited in the U.N. study says the Forest Service is espousing junk science.

Nothing in that report supports what theyre claiming, saysDominick DellaSala, a former president of the Society for Conservation Biology. Beverly Law, an Oregon State University professor, says the Trump administrations argument is misinformation.

Trumps plan, pushed by Agriculture Secretary Sonny Perdue, would slash protections for more than 9 million acres of the Tongass National Forest, an area larger than Yellowstone, Glacier and Grand Canyon national parks combined. Building roads in the Tongass is prohibited under a rule published in the last days of President Bill Clintons administration.

The Tongass stores more carbon removed from the atmosphere than any other national forest in the country in its old-growth Sitka spruce, hemlock and cedar trees. It helps protect Alaska, which is warming more than twice as fast from climate change as our planet overall. The forest holds about 650 million tons of carbon or about half of U.S. carbon dioxide emissions in 2017.

Comments:

I do not want any changes to the roadless rule. I strongly want alternative one. It is time to stop cutting down forests. With climate change becoming more of an emergency the preservation of forests should be a number one priority. If Alaska is concerned about making money then there is more financial benefit to preservation of the forest to protect tourism and fishing. Fishing and tourism, which depend on a healthy forest, bring in more than \$2 billion to Alaska annually. The Tongass alone supplies 25% of the West Coast's commercial salmon catch. The inhabitants here, especially those in rural communities, rely heavily on these fish.

Tourism accounts for roughly 72,000 jobs versus the oil, gas, mining, and logging industries which together support just 15,000 jobs.* Do not exempt Tongass from the roadless rule.

Comments:

My name is Sharon Feissel and I live in Santa Rosa, California.

I know I'm strange, but I do like to breathe clean air.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Sharon Feissel

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Privatization of public resources is not the highest good. Don't do the roll back or allow logging, please.

Regards, Mary Feitler

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC3651

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Cliff Feldheim

West Sacramento, CA 95691

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule HELPS PROTECT old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads WILL FRAGMENT the forest and ELIMINATE more of the big old trees that these animals rely on.

WE ARE AWARE THAT THE U.S. FOREST SERVICE IS RUN BY CRONIES/SHILLS OF THE TIMBER INDUSTRY & OF WHOM THE U.S. FOREST SERVICE WORKS FOR=\$\$\$\$. PUSHING THROUGH THEIR AGENDAS WITHOUT ANY CONCERNS OR CARING ABOUT THE ENVIRONMENTAL DESTRUCTION CREATED BY YOUR DESPICABLE INSENSITIVE ACTIONS.

Yet, all of the action alternatives in the Draft Environmental Impact Statement ALLOWS MORE roadbuilding AND LOGGING across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Mark Feldman

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

As I'm sure you know, the Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on. Furthermore, intact ancient forests are strongholds of climate resilience and the Tongass is one of world's largest.

Yet all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year with zero return on investment; meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It's time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Paul Feldsher

Comments:

My name is R. Felice and I live in San Diego, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, R. Felice

HC3532

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Edgar Feliz

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely, [Signature]

Comments:

My name is Haydee Felsovanyi and I live in Pescadero, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Haydee Felsovanyi

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Bob Felt

Comments:

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Wendy Feltham

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

My name is Emily Fendya and I live in Haddonfield, NJ. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I was lucky enough to live for a short time on the edge of the Tongass. I was a guest on that land, but in my short time there, the forest and its abundance of wildlife nourished me. I believe that the Roadless Rule should remain, protecting the Tongass from logging, extraction, development, and deforestation. We must take a generational view - this wilderness belongs to the generations to come, and they deserve to have it intact. There is nothing more beautiful or alive than this forest, and I hope it is allowed to remain that way.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, support small-scale, sustainable logging, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

My name is Jennifer Fendya and I live in Buffalo, New York.

We would do well as a society to learn from the "seven generations" principle that indigenous peoples understand as sanity, rather than continue down the path of self-annihilation, the effects of which are already upon us.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Jennifer Fendya

Comments:

HC5427

U.S. Forest Service Alaska Roadless Rule Committee:

Alaska has the last, largest, most pristine forests and waters in the United States - thanks primarily to the protections the "Roadless Rule" gives them. They have remained pristine and wonderful for thousands of years, despite onslaughts from timber and mining interests. They will most likely no be able to remain pristine under further attacks to the "Roadless Rule." Millions of visit-days by Alaskan and non-Alaskan angler, hunters, and other non-industrial users contributes Billions of dollars to Alaska's economy - and for much, much longer more than the extractive users contribute.

As an avid angler and recreational user of Alaska's wonderful forests and waters, I add my voice to the millions of other "recreational users" who support the 'no action' alternative to leave the Roadless Rule unchanged in Alaska.

As do millions of others, the proposed changes to the "Roadless Rule" worry me, as they most likely will lead to horrendous damage to Alaska's pristine outdoors! We foresee greatly expand clear-cut logging; costly, irreparable, and destructive road building in wild areas of both Tongass and Chugach Forests; and tremendously decreased revenue from tourism and recreational users. These unsustainable extractive activities increase sedimentation, irreversibly harm water quality, block salmon migration, and add to an already huge backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

James Fenner

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Organization: North Cascades Conservation Council

Title: President

Comments:

I am Philip Fenner, President of the North Cascades Conservation Council (NCCC). NCCC was founded in 1957 to protect and preserve the scenic, scientific, recreational, educational, and wilderness values of the North Cascades. We are strong supporters of the 2001 Roadless Rule and are concerned with maintaining its integrity nationwide. We view the Tongass Roadless DEIS as a threat to this integrity and thus a looming threat to our own extensive roadless areas in the North Cascades, which has the greatest extent of otherwise unprotected roadless areas in the contiguous 48 States.

I have researched the Purpose and Need in the Tongass DEIS. After twelve pages of obfuscation and circumlocution I conclude that the implicit Purpose is to cut the trees in the Tongass National Forest and the Need is to build roads for access to those trees and haul the logs away. While the DEIS contains many disingenuous reassurances of that there will be little or no impact from logging and road building, 18 issues that would evaluate those impacts are eliminated from detailed study!

Removing 9.2 million acres of Tongass National Forest from the protection of the national Roadless Rule and depending upon the state of Alaska to safeguard the values inherent in untrammeled roadless forests is the equivalent of asking the fox to guard the chicken coop. You can only expect to have feathers, or in this case stumps, left.

NCCC strongly supports the No Action Alternative, thus maintaining the national Roadless Rule in the Tongass.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Ann Fennern

Comments:

I object entirely to USDA's proposal for the exemption of the Tongass National Forest from the 2001 Roadless Area Conservation Rule. Expanding the area of tree harvest and road construction serves no purpose other than to line the pockets of those other than locals. From what I listened to, as well, during the Washington DC public discussion in mid-November, is that it does not make economic sense either for the Forest Service due to a lack of bids on the same forest in the previous year. Secondly, we are obviously in the midst of a climate crisis at this current moment and the Forest Service should be working to mitigate that (rather than adding to it).

Additionally, as I previously mentioned in the DC public discussion, I do not believe that this adds to the mission of the Forest Service: "to sustain the health, diversity, and productivity of the Nation's forests and grasslands to meet the needs of present and future generations." Cutting additional trees - old-growth trees, in fact - will not sustain the health or diversity of the Tongass National Forest. And these actions do not fulfill a present or current need and certainly do not represent the needs of local populations. I can only hope, but do not believe - based on comments by Kake representatives - that by now, the secretary will have listened and personally visited a number of native villages in order to hear their stories and comments. As we well know, it is extraordinarily difficult to get around Southeastern Alaska and I believe it is rather likely that the elder Natives are unable to leave their home to make comments (much less do they have Wifi to send in comments or potentially even a post office). Is the Forest Service providing for their futures by cutting additional forest? Is the Forest Service providing for their children? Don't we think it's about time that we - colonists - stop taking advantage of Natives - whose land we took and continue to utilize for our own gain? Isn't this a story that has been repeated enough?

I would like to add two additional points: if the secretary knows anything about Alaska, it should be clear that Alaska runs on salmon. As a fisherwoman this summer season in Alaska, I can say that I have run the numbers myself: I saw that over just over a decade, the number of salmon returning is decreasing. However, unlike Natives, I have the luxury of not depending on this salmon for my survival. We know that cutting trees can increase erosion and debris - this debris chokes the rivers that give life to the salmon runs. Furthermore, cutting additional trees, particularly old-growth, will create forest gaps, increasing local temperatures (as trees keep the land cool). Increased water temperature is directly linked to a decreased amount of oxygen in the water for fish to breathe. Is the Forest Service thinking of the livelihood that is salmon?

This livelihood is not only for Natives: southeastern Alaska runs on tourism. Fishermen flock to Alaska but also, as we all know, the cruise lines go straight up from Washington to Juneau, right past the Tongass. I followed that same line but with a 32-foot boat a few years ago. I saw animals and landscapes in Alaska while working as a deckhand that inspired in me a love for nature and a fervent need to protect it. This was eco-tourism at its finest but I can't say it would be like that if instead of observing endless trees on the trip, I saw only forest gaps and unclear waters.

I believe that the decision of the secretary should be crystal clear. Secretary, do you respect Natives? Do you truly understand how Alaska - especially Southeastern Alaska - runs on salmon and eco-tourism? And finally, do you believe that the exemption of the Tongass would be promoting the mission of the Forest Service?

The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Remy Fenster

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

Dear Chief Christiansen,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments:

My name is Caroline Fenton and I live in Sitka, Alaska. I've been living in Southeast Alaska for the past couple of months. I value the forest for the ways it transcends value- providing Alaskans with a source of life/(tools for survival) and meaning since time immemorial. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my the peace and solitude I find in nature, recreating, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It shows the Forest Service is responding to the needs and voices of Southeast Alaskan communities. I depend on roadless areas in the Tongass National Forest for recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because It destroys ways of life, connections to culture, discounts voices, and countless other negative impacts.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Clivefield Fenton

Alaska Roadless Rule

USDA Forest Service

Attn: Alaska Roadless Rule

P.O. Box 21628

Juneau, Alaska

99802

14 December 2019

Dear Folks

I support Alternative 1 which takes no action and would leave all of Alaska under the 2001 Roadless Rule, including the Tongass National Forest.

Seven decades of high-grading has dramatically depleted the Tongass Forest's largest (4-10 feet in diameter) old-growth trees. And those rare, old-growth stands provide some of the most valuable fish and wildlife habitats on the Tongass. If the new Prince of Wales timber sale moves forward and the Roadless Rule protections are removed, most of the remaining large-tree forest stands will be clear-cut and their habitat values for wildlife and salmon will be permanently lost.

This would further jeopardize two of southeast Alaska's significant economic drivers: fisheries and tourism. For both ecological and economic reasons, this is why the Tongass should not be exempted from the Roadless Rule.

We cannot replace large old-growth trees and the habitat they create. The time has come to stop cutting them down.

Sincerely,

Garth Ferber

Comments:

The Tongass is priceless, keep it roadless for wildlife

Please select the "No Action" alternative on the Alaska-specific Roadless Rule instead of the sweeping changes the administration is promoting. The changes allowed by those changes would completely remove the Tongass National Forest from roadless protections and result in irreparable damage there.

I'm sure you're well aware that the Tongass National Forest is one of the last intact temperate rainforests on Earth. There are old growth forests in its roadless lands and the forest is home to a stunningly diverse array of wildlife including salmon, wolves, bear, deer, and birds of prey such as the Northern Goshawk.

The Tongass is America's largest and wildest national forest and it absorbs and stores approximately 8 percent of the total carbon of all the national forests of the lower 48 states combined.

The proposed rule opens an additional 165,000 acres to logging and strips Roadless Rule protections from all 9.2 million acres of inventoried roadless areas in the Tongass. The rule will fragment the forest and harm wildlife that rely on old-growth habitat.

The proposed rule is opposed by an overwhelming majority of public. Their input favored maintaining roadless areas or making only small modifications.

The course chosen by the administration ignores the public, fails to find balance, and threatens the crown jewel of the National Forest System. Please select Alternative 1, the "no-action" alternative.

Thank you,

John Fergus

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Blair Ferguson

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Blair Ferguson

HC3647

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Blair Ferguson

Comments:

My name is Brian Ferguson and I live in Seattle, Washington.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Brian Ferguson

Comments:

We must protect our forests and wildlife if we are going to survive climate change. We must protect indigenous lands if we are going to heal ourselves and the land.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative 1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest, which exists within the traditional territories of the Tlingit, Haida, and Tsimshian peoples. The Tongass is the world's largest intact temperate rainforest and has been called "America's Climate Forest" as it is the single most important national forest for carbon sequestration and climate change mitigation in the United States.

Globally, deforestation (8-15%) and forest degradation (6-13%) contribute more greenhouse gas pollution than the world's entire transportation network, which is why countries, including the U.S., must commit to reducing emissions and protecting forest carbon sinks, like the Tongass National Forest.

During the original rulemaking process, more than 1.5 million Americans voiced support for the Roadless Rule, which followed decades of clear-cutting that had a destructive and lasting impact on the Tongass. The rule continues to receive overwhelming support, with a 2019 poll finding three-fourths of the general public in support of the Roadless Rule.

If Alaska is exempt from the Roadless Rule, it will open up the forest to further industrial scale logging. Deforestation of the Tongass will threaten the health of Alaskan salmon by polluting rivers and streams, harm cultural and sacred sites of great importance to Indigenous communities, jeopardize local economies based on tourism and fisheries, and continue to cost taxpayers money. New budget data revealed that the US Forest Service could end up losing more than \$180 million in the Tongass over the next four years.

Additionally, many Indigenous communities have stated they are not interested in exempting the Tongass from the Roadless Rule. In October, The Affiliated Tribes of Northwest Indians, which represents 57 tribal governments, passed a resolution in support of the Roadless Rule in Alaska. If the Tongass is made exempt from the Roadless Rule, it will not only destroy the forest and our global climate but the exemption will actively contribute to the ongoing genocide of Indigenous Peoples whose identities, cultures, and livelihoods are integral to the forest.

I urge you and the Forest Service to protect over 9 million acres of forest, defend our global climate, and stand with Indigenous and local communities by keeping the National Roadless rule intact and selecting the no-action alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative 1.

Sincerely,

Elizabeth Ferguson

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Judith Ferguson

HC514

Dear Secretary Perdue and Senator Murkowski, [text bolded for emphasis]

I am currently on a boat cruise off the coast of South Baranof Wilderness, hosted by the Sitka Conservation Society (SCS). SCS hosts boat cruises in the summer to introduce people to the marvelous wonders of the Tongass with the help of experienced boat captains and knowledgeable naturalists. On this cruise into the South Baranof Wilderness, I have seen:

Grey whales and breathtaking roadless landscapes

The Wilderness area is rich in biodiversity and supports an incredibly productive ecosystem. Salmon, steelhead trout, dolly varden are sustained by the vast freshwater stream systems that empty into fjords and inlets. Brown bears feast upon these salmon as they swim upstream, distributing their carcasses throughout the forest. These carcasses fertilize the soil and feed the Sitka Spruce and Mountain Hemlock trees that tower over the land. Underneath this old growth canopy, Sitka Black-tail deer browse on abundant berries and shrubs.

The South Baranof Wilderness is not the only place in Southeast Alaska with such incredible biodiversity. It is just one example of what the Tongass National Forest can produce when it is protected and left to its own natural processes. The flora and fauna that we find in the South Baranof Wilderness area also thrive in inventoried roadless areas throughout the Tongass. These roadless areas are numerous around Sitka and provide our community with important hunting, fishing, foraging, and recreating opportunities. We depend on these roadless areas for our sustenance and our livelihoods including our commercial fishing and tourism industries.

Outside of Wilderness areas like South Baranof, our way of life and the roadless areas we depend on are being threatened by politicians and special interests pushing for short term profits that have long term ecological and economic consequences. Wilderness areas, roadless area, and the intact habitat they support are an investment in the long term sustainability of our region. ***Please keep the national Roadless Rule on the Tongass!*** [text double underlined for emphasis]

Sincerely,

Julia Ferguson

HC298

Dear Alaska Roadless Rule Planning Committee,

I live and work on the lands and waters of the Tongass National Forest. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, Southeast Alaskans rely on the intact habitat that the roadless areas of the Tongass National Forest contain. ***That is why I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule.***
[text bolded for emphasis]

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I strongly oppose any efforts to weaken protections for Roadless areas in the Tongass National Forest and the Chugach National Forest.

The Forest Service needs to continue phasing out old-growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. The Forest Service should focus on restoring degraded watersheds and fish streams and carbon sequestration.

I'm for 2nd Growth logging on existing roads. No New roads!

Old growth logging makes no sense, given the realities of our times. Log only on existing roads.

My name is Lisa Ferguson and I live in [@advCity], California.

Please, don't kill the beautiful forests, we need them to breathe.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Lisa Ferguson

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC5241

U.S. Forest Service Alaska Roadless Rule Committee:

The "Roadless Rule" needs to stand as it was intended to ! NO Changes.

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Roy Ferguson

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

My name is Mary Ferm and I live in Bainbridge Island, Washington.

Temperate rainforests are rare and slow to re-grow. The Tongass belongs to all Americans, not to the lumber industry.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Mary Ferm

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, John Fermoil

Comments:

I object to the proposed Tongass National Forest exemption from the Roadless Rule. The rich biodiversity of this forest supports untold varieties of plants and animals not to mention the integrated relationships which directly impact man. To open this area to logging and other possible future destructive development would be a mistake. Like throwing the baby out with the bath water, someone would profit in the short term but history would reflect on this action a step down the slippery slope to mans self destruction.

I have also written to Senator Sherrod Brown on this issue.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments:

It is massively irresponsible to consider changing the access conditions in the Tongass wilderness area. Logging the Tongass would jeopardize a massive carbon sink, only furthering our already dire climate emergency. The construction of roads would jeopardize wildlife habitats and potentially reduce the biodiversity of its old-growth forest. It would pollute water sources, and put local populations at risk. It opens up the area's ecosystem to extreme shifts which could have ripple effects we desperately need to avoid right now. Please work to protect wild spaces like these-they're our last hope.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, John Ferrante

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Alexia Ferranti and I live in Tucson, Arizona.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Alexia Ferranti

Roadless Rule public comment

Dear Forest Service,

I believe the only alternative is Alternative 1 on this issue. Please continue to protect all of Alaska under the 2001 Roadless Rule, including the Tongass National Forest. There is way too much to loose and not enough to gain from harvesting timber. We desperately need to stop making short sighted decisions about resource management in this state! Alaska is precious as a wilderness to so many species including humans. Let the trees stand!

Thank you,

Libby

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Robert Ferrara

First name: Matthew

Last name: Ferrer

Organization:

Title:

Comments:

My name is Matthew Ferrer and I live in Willits, CA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I care deeply about preventing wildlife habitats from being harmed and exploited for profit. I strongly feel that preserving healthy Eco-systems is essential to the survival and quality of life for future generations of humans and non-humans alike.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains. I value the Tongass National Forest and the Chugach National Forest and the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

My name is Jessie Ferri and I live in Valrico, Florida.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Jessie Ferri

HC5420

U.S. Forest Service Alaska Roadless Rule Committee:

The old growth forests support great wildlife and fisheries and each supports the others. We need to keep mining out and maintain overall forests management practices that will protect this awesome resource and allow the salmon and steelhead to continue to prosper.

Leave the Roadless Rule as is.

Thank you[hellip] Avid Flyfisher

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Dwight Ferrick

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Marianne Ferrin

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Pauline Ferrito

Title:

Comments:

My name is Martin Ferrone and I live in Grand Rapids, MI. I am a global resident, not resident of Alaska. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my the conservation of resources for future generations the forest's ability to sequester carbon and mitigate climate change impacts, the status of the Tongass as a national and global treasure, fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, practicing my culture.

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations, practicing my culture, foraging and gathering wild foods, deer habitat and subsistence hunting, healthy fish habitat, economic livelihood, fiscal responsibility and saving taxpayer dollars . A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around all of the inventoried roadless areas on the Tongass Chichagof Island, Admiralty Island, the northern mainland above Port Snettisham (around Juneau), the central mainland from Hobart Bay to Stikine River, the southern mainland from Bradfield Canal to Dixon Entrance Kupreanof Island, Kuiu Island, Wrangell and Etolin Islands, Prince of Wales Island, Revillagigedo Island (near Ketchikan), Yakutat forelands. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because It will cause a disturbance in the Bio diversity of the entire area and its surroundings.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should invest in creating and maintaining recreation infrastructure.

I am a woodworker who is fascinated by all growth and use it with great care.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Comments:

I oppose any change to the 2001 Roadless Rule that now protects the Tongass National Forest. Alternative 1 should be adopted. That the Forest Service would promote Alternative 6, which open up the entire national forest area to development, as its "preferred alternative" is incomprehensible, because any reduction in the level of protection for this area will harm the forest ecosystem and the watershed, and tourism and fisheries. The Tongass, with vast tracts of old-growth forest, is one of the last of its kind in the world. The forest sequesters carbon. If logging increases, carbon dioxide in the atmosphere will increase as well, further accelerating the loss of Alaska's iconic glaciers.

When natural areas are carved up with roads, they no longer function well as ecosystems. The short-term economic benefit to some in the logging industry should not outweigh the long-term harm to all that would come from exempting the Tongass from the Roadless Area Conservation Rule.

I'll note, too, that Alaska wild-caught salmon is becoming more and more rare at the grocery store. Now, my friends and I order direct from Alaska seafood companies. Please protect fisheries by retaining the Roadless Rule as it stands.

Thank you for considering this comment.

It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Henry Feuerzeig

My name is Deborah Fexis and I live in Nottingham, New Hampshire.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Deborah Fexis

I support keeping the roadless rule intact and protecting all of the Tongass National Forest from logging since it has *never* been profitable to log. It's ridiculous to cut down old growth forest - and then ask the American taxpayer to pay for it! This must be stopped. The Tongass belongs to all Americans and not be given away for the profit of corporations.

Maintain protections for Alaska Roadless Rule

Dear Secretary Secretary Perdue,

I live and work in Juneau, Alaska and thought we had a pretty good deal going forward to log second growth timber while also protecting some of the last great salmon fresh water habitat in the world. and then we were met with what seems to be the most corrupt and backwards thinking state and federal administrations of my lifetime. Building roads to the last remaining old growth timber in the Tongass threatens fisheries, subsistence users way of life, and tourism to Alaska which are all vital to the survival of our communities.

I ask you be conservative in action, support responsible government spending, and chose alternative 1 making no changes in the current roadless policy.

Thank you.

Sincerely,

Mr. Tyson Fick

HC5399

U.S. Forest Service Alaska Roadless Rule Committee:

I am at loss as to why the U.S. Forest Service would risk endangering the Tongass and Chugach Forests by changing the Roadless Rule. I have been a lifelong trout fisherman who believes that our fish and wildlife resources need to be protected for the present and also for the future. These areas are precious to not only native Alaskans but also to those of us who live in the other 49 United States. I want to be sure that my children and grandchildren have the ability to fish and hunt in some of the last old growth forests in the country.

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Stephen Fiduk

Fountain Valley, CA 92708

Comments:

I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. It is imperative that we maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC3315

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Ed Fiedler

My name is Byron Fiegel and I live in Oley, Pennsylvania.

Please stop this administrations' focus on corporate profits for extractive industries above the protection of vital natural resources.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Byron Fiegel

Comments:

I'm a lifelong Alaskan and I'm concerned about the proposed action in this DEIS.

The preferred action in the DEIS for Alaska Rulemaking for Alaska Roadless Rules is concerning to me because the preferred action is that which would fully exempt the Tongass Forest from the roadless rule. This full exemption would open 9.2 million acres of designated roadless areas and open and additional 165,000 of old growth forest to logging. I'm interested in further explanation as to why a full exemption to the Roadless Rule is considered preferable when the purpose of this project states "A long-term, durable approach to roadless area management is desired that accommodates the unique biological, social, and economic situation found in and around the Tongass." It seems like roadless areas would be difficult to manage if they're not designated as roadless areas anymore.

I urge you to consider Alternative 3 more strongly than the current preferred alternative, Alternative 6. This plan provides a structure which would encourage logging endeavors in areas considered substantially-altered roadless areas under the 2001 Roadless Rule. If the opportunity for logging is going to be opened up I think it's essential to restrict development to areas which already have infrastructure of some sort, rather than developing in wholly untouched forest.

This alternative also designates Community Priority areas, which ensures that local communities have access to the benefits which would come from opening up the possibility of logging projects. This being said, I think it's important to include the communities of Hydaburg and Kake in the Community Priority areas.

Overall, since from my understanding, any proposed projects within the Tongass will still be subject to NEPA and the Tongass Land Management Plan, I support allowing for a state specific Roadless Rule which will make the use of the Tongass more flexible. Please provide further information if I'm mistaken in this assumption. With this being said, the preferred action within the DEIS is not the action which is in the best interest of any stakeholders and it doesn't even align with the stated purpose of this project.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

My name is Fran Field and I live in Sparta, Wisconsin.

The Tongass National Forest in Alaska is a rare temperate rainforest. Its often referred to as Americas Climate Forest because, much like the Amazon, it plays a critical role in fighting climate change by retaining vast stores of carbon in its old-growth trees.

At the request of corporate interests, the Trump administration is seeking to remove protections for Alaskas Tongass National Forest and open it up to clearcutting of countless century-old trees. We need the USFS to do the right thing for the American people by stopping this from happening!

Half of the Tongass National Forest has been protected by the Roadless Rule, which was implemented in 2001, and is one of the most popular conservation measures of the last century. It prevents clearcutting in about 56 million acres of national forestland across the country. But now, this administration has directed the Forest Service to roll back the Roadless Rule in Alaska, opening new areas to clearcutting to put money in the pockets of timber corporations. That is completely unacceptable and not what informed citizens want. It will exacerbate the climate change crisis that is an existential threat to the entire planet (despite this irresponsible Administration's denial and refusal to accept scientific fact.).

The Tongass provides vital habitat for eagles, bears, wolves, salmon, and countless other species. Alaska Natives such as the Tlingit rely upon its lands and waters for their livelihood and culture. And visitors from around the world travel to the Tongass for world-class recreation, hunting, sport, and fishing.

The rich wildlife, these vital sustainable industries, and the rights of indigenous peoples in Southeast Alaska should take precedence over the demands of a few corporations and their lobbyists, who want to open some of the last remaining old-growth temperate rainforests to clear-cut logging.

Forest Service, stop putting corporate profits above the public interest and to protect our national forests, our air, and our water for future generations!

Comments:

Given the low economic benefit to opening the region for logging, compared to the high value of our few remaining old growth forests. It is abundantly clear that the entirety of the Tongass should remain under the 2001 Roadless Rule. The logging industry has access to millions of acres of young growth forest that is already logged and developed to support it in the Pacific Northwest, opening further old growth forests merely damages ecosystems and the tourism economy with little apparent benefit.

Please do not open the Tongass to further logging and mining interests.

HC3939

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Mitchell Field

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Holly Fields

We have been fighting for decades to protect the treasure that is the Tongass National Forest. The more we know about the dangers of climate change and the importance of trees to fight it, the more essential it is to keep this magnificent forest intact. Greed and profit for a few cannot be allowed to "trump" care for our planet.

Leave the Roadless Rule in place !

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Keep the Roadless Rule intact on the Tongass

Dear Interdisciplinary Team Leader Ken Tu,

Climate change doesn't affect me. Not right now. I'm not sure that the tunnels we built in the snow when we were kids were possible because there was so much snow, or because we were so small. In the last 30 years, living on the east coast, we rarely built those tunnels with our kids.

I am a skier, but don't feel I can speak for the world because I'm a skier. I'm writing because I know that climate change affects people around the world, whose lives have been changed because their environment has. I know that these changes are coming my way and I'm a fool if i pretend that because the changes don't affect me now, I can ignore the changes to others.

We need to protect the Tongass if not because it's beautiful, but because we are selfish and need to protect ourselves.

Sincerely,

Annie Fierman

Frisco, CO 80443-2752

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Maintain protections for Alaska Roadless Rule

Dear Secretary Secretary Perdue,

Dear Mr. Perdue,

I will not preach my two cents at you in regard to the importance of the countless issues at hand, for I believe the amount of voices constantly chirping in your ear, trying to sway you this way or that, are countless and deafening. Instead, I will ask you to look within yourself, believing that one does not become the Secretary of the Forest Service without having a heart to Serve the Forest, which in so doing of course means we are preserving ourselves in turn. This is a truth that exists beneath, above, and beyond all the voices of the people, and when one steps into any forest or landscape of the world, with eyes and heart open and unclouded, is undeniable and overwhelming.

I thank you for your time, and your service, for your decisions ultimately affect our future generations, of which is the most recent born child of my wife and I...a baby boy, that we have by chance, named Sonny.

Be well,

Ben Fife

Sincerely,

Mr Benjamin Fife

Comments:

I am a retired Forest Service resource manager, an archaeologist and tribal relations specialist. I spent about 15 years (1994-2009) as part of various planning teams for the Prince of Wales Island Zone of the Tongass NF. I don't want to take up everyone's time with a long-winded analysis of the situation. I believe that the criteria for adopting the Roadless Rule in 2001 and the rationale for determining roadless area boundaries are still valid. I think the current attempt to adopt an exemption to the roadless rule is simply an attempt to take advantage of what appears to be a favorable political climate to overturn the earlier decisions. In my view the Tongass is historically approaching a time when old-growth harvest is going to be a thing of the past. The situation, as it is now, is an attempt to preserve a small sample of SE Alaska's rainforest in something resembling an old growth condition. At the same time it was recognized in the late 90s that the timber industry would need to adapt to the inevitability of the move to a second growth economy. That transition is in the best long-term interest of the industry itself and of the regional economy in general. Of course there has been resistance to that transition. It requires new equipment. It is expensive. The roadless rule is a tool that nudges the industry to make that inevitable transition. Adopting an exemption may "add some flexibility" to the industry's planning; it may put a few more trees on the market for a few years. But, in the end it would just delay the transition that must come in the near future. I would urge you NOT to adopt the exemption and to stay on the course that has been moving the region towards a second-growth timber industry for the past 18 years. Thanks for the opportunity to comment.

The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

My name is Jessica File and I live in Saint Charles, Missouri.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Jessica File

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

The Tongass, America's largest and wildest national forest, draws outdoor adventurers, boaters, birders, hunters, and anglers. An intact Tongass supports a robust Southeast Alaskan economy through tourism, commercial and sport fishing, and small businesses. Its old-growth trees provide irreplaceable wildlife habitat for myriad species including wild Pacific salmon, Alexander Archipelago wolves, and Sitka black-tailed deer.

The Trump administration wants to do the opposite and lay waste to some of our country's most unspoiled wildlands that absorb massive amounts of carbon. The Tongass National Forest stores more carbon removed from the atmosphere than any other national forest in the country. Alaska's elected officials are selling out their constituents and robbing future generations by trying to strip protections from one of the most pristine old-growth forests in the world. It's wrong to put private profits ahead of the health and future of Alaskans.

I ask that you do not repeal the Roadless Rule protections across more than nine million acres of the Tongass, dangerously weakening this national standard by enabling logging interests to bulldoze roads and clear-cut trees in areas of the Tongass that have been off-limits for decades. The rule continues to receive overwhelming support in Alaska and across the nation. Recent polling shows that 61 percent of voters nationwide oppose exempting large parts of the Tongass from the protections of the Roadless Rule. In Southeast Alaska, 60 percent support keeping the Roadless Rule in place, more than twice as many as those who support a Tongass exemption.

Hello Forest Service,

I would like to comment on the Alaska Roadless Rulemaking #54511.

Please DO NOT allow this terrible thing to happen! The roadless rule was made for a reason and if this is overturned would cause irreparable damage to Alaska and our planet!

My comment is to do as follows:

Alternative 1 take no action and leave all of Alaska under the 2001 Roadless Rule, including the Tongass National Forest.

Thank you for your time and consideration.

Warmly,

Christina

First name: Adam

Last name: Filipp

Organization:

Title:

Comments:

My name is Adam Filipp and I live in San Jose, CA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I have worked in the forestry field for over 3 years and I understand that the health of our old growth forests is vital for the stabilization of our climate. Furthermore, Logging as a commercial practice destroys soil and disturbs fungal networks that are important to the health of our forest ecosystems.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes.

Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

HC5301

U.S. Forest Service Alaska Roadless Rule Committee:

Adding roads to the Tongass N.F. will only hasten the destruction of this pristine forest with the introduction of invasive plants and species, etc.

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for more than 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Frederick Fillmore

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Title:

Comments:

My name is Nicholas Fils-Aime and I live in Islip Terrace, New York.

There is no planet B. This is our home. We must take action in order to protect the Earth for future generations to come.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Nicholas Fils-Aime

We have heard for over 70 years that we got lots of time to better manage the way we are using the Creator's gifts. Greed however seems to be more important than taking care of our water, forests animals and human life. Well the time has come that there are no more tomorrows. We must put back to nature what we use and in a form so it can be used over and over again!

HC5704

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

HC3612

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Steven Fine

The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Mary Finelli

Comments:

"The U.S. Forest Service must respect Southeast Alaska's communities, but it also owes a responsibility to our nation. We should never forget that the Tongass is a national forest, and right now our nation faces an unprecedented threat from global climate change. We have a responsibility to protect ancient forests as natural buffers against climate change, and the Tongass is the largest carbon sink in our national forest system. For the U.S. Forest Service to ignore and exacerbate our climate emergency, while wasting taxpayer dollars on resurrecting a timber industry whose time has long since passed, is beyond irresponsible - it's foolhardy."

Respect our national forests, put climate over profit, do the right thing for the future of public lands and for our planet.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Chris Finfrock

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC421

Dear Roadless Rule Planning Team,

The health of the Tongass National Forest is important to me. I depend on the Tongass which is a unique and global treasure.

The freshwater streams where salmon and old growth forest of the Tongass provide spawning habitat for these fish, which in turn feed a matrix of bears, birds, insects, and other wildlife that Alaska is so famous for. The health of our economy, which is heavily dependent on the fishing and tourism industries, also depends on the salmon, wildlife and presence of old growth forests. A sustainable future for Southeast Alaska requires protecting expansive areas of intact habitat - in short, it requires keeping our Roadless areas roadless! I urge the Forest Service and the Secretary to protect important salmon spawning habitat, maintain old growth forests for winter deer habitat, and keep the places I like to recreate free of clearcuts and roadbuilding.

WHO I AM: [text bolded for emphasis] Include your name, where you live, and any relevant biographical information. Do you live or work on the Tongass National Forest? What is your relationship to the Tongass?

Robert Fink, Skagway, AK, long time alaskan, former commercial fisherman, 25 years in timber industry, I work in the forest on the chillkoot [illegible] not actually the tongass, it's still part of this whole grand forest system that I love and need for my psychological, and emotional peace of mind.

PREFERRED ALTERNATIVE: [text bolded for emphasis] The Forest Service will choose how to proceed from a number of different alternatives. If you want the Roadless Rule to remain on the Tongass, write "No Action."

No Action!

WHY I PREFER THIS ALTERNATIVE: [text bolded for emphasis] How would this alternative affect you and Southeast Alaskans?

I've seen how devastating clearcut logging can be, I worked 25 seasons as a treeplanter in the Pacific N.W. I'm old enough to remember the vast clearcuts that we used to have in S.E. AK. I also greatly fear what opening vast areas would do to our fisheries, and wildlife. The added effect of carbon sequestering as opposed to clear cutting is on my mind as well

AREAS: [text bolded for emphasis] Are there specific islands, watersheds, or mountains that you depend on? Name the most important areas that the Roadless Rule to protect. Examples include the Tenakee Inlet, Nakwasina Sound, Fish Bay, Ushk Bay, Northern Prince of Wales, T77 salmon watershed areas, Audobon TNC ecological priority areas, etc.

Any salmon spawning water sheads, especially those having, kings, or sockeye. All wildlife winter range, all bird breeding grounds i.e. wet lands and old growth impart for marbled markets and all cavity nesting species, and our rare flying squirrels.

USE: [text bolded for emphasis] What activities do you use the Tongass National Forest for? Hunting, fishing, recreation, subsistence, business, tourism, etc.

Tourism - it's a big important part of what lovings my clients here. - subsistence - I eat the salmon and berries.

SUGGESTION: [text bolded for emphasis] How should the Forest Service manage the Tongass National Forest, rather than old-growth clearcut logging? More sustainable alternatives to timber harvest include salmon

watershed restoration, visitor industry infrastructure, deer habitat enhancement, young growth thinning, and maintenance of recreation infrastructure such as trails and cabins.

I would support a limited, science driven, selective harvest of existing second growth, using existing roads or Helicopters + Balloons at a sustainable rate that emphasizes watershed and wildlife habitats that would promote long term Healthy economies for

Additional comments for the Forest Service:

our communities where tourism, Logging, commercial fishing could all thrive and make more diversified economies. I've worked in all 3 of these fields and know it can be done!

Sincerely,

[Signature]

Robert D. Fink

HC3586

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Wesley Finkbeiner

My name is JEANNIE FINLAY-KOCHANKOWSKI and I live in Toledo, Ohio.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, JEANNIE FINLAY-KOCHANKOWSKI

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Tongass National Forest

I support Alternative 1 which takes no action and would leave all of Alaska under the 2001 Roadless Rule, including the Tongass National Forest.

I oppose the over-turning of The Roadless Rule because our commonly held National Forests should no longer be open to industry but should be held in public trust and protected. The Tongass National forests is unique in its biodiversity, its size and its role in the Salmon ecosystems of Southeast Alaska. The Southeast Alaska Native people who's land these forests are on are also asking for their protection and as a public entity the Forest Service needs to listen to both them and the public.

Thank you for your consideration of this critical decision.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Why is this even being considered right now? We are in a time of reckoning with climate change and the US is proposing to log one of our biggest carbon captures? For the short term profit of a few? Logging the Tongass National forest would be stupidly short sided and totally immoral. Please do not do this. The short term jobs you create in logging will destroy the commercial fishing industry and youll lose many more jobs when the salmon are gone.

HC5327

U.S. Forest Service Alaska Roadless Rule Committee:

Every year, as a graduation gift to each of my son's I would take them on a fishing trip to the Copper River. We would stay at a friends home in Cordova and then each day travel up the Copper (early September each year) to fly fish for Coho. Some of my very best "father and son" memories are from these trips. Grizzly tracks, moose and black bears, native coho in side channels, sloughs and beaver ponds, hiking and wading "unknown" little streams and exploring the area on our own, on foot. Is some of the best parts of these annual trips. Now my sons are old enough to have children of their own and we look forward to sharing this amazing place with my grand children.

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for more than 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

My name is James Finnigan and I live in Wappingers FI, New York.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, James Finnigan

Save the old growth forests for all of humanity. The commercial loggers need to learn that it's not too late to put the chainsaws down and become part of the solution, as opposed to the problem.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Bruce Finocchio

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

We do NOT have to destroy our entire country in greed! Surely, the American people are smarter than this. I did NOT serve my country for 20+ years to have it destroyed by greedy, unethical, careless, mindless corporations. Neither did my husband who served his country 4 years in time of war.

The Roadless Rule helps protect old-growth ecosystems and habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. We don't even yet understand much of the operations/functioning of the ecosystems the greedy corporofascists are eyeing for rape and pillage. Did we learn nothing over the past 200 years?

Opening roadless areas to more logging and roads will fragment and destroy forever the forest ecosystems. As noted earlier, we are so ignorant of ecosystem functioning that we can NEVER restore any ecosystem once we have let the ignorant and greedy destroy them. Intact, ancient forests are strongholds of climate resilience, and the Tongass is one of world's largest.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding, more logging, more nasty destruction across OUR Tongass National Forest. Logging roads and timber operations cost tens of MILLIONS OF TAXPAYER DOLLARS EVERY YEAR WITH ZERO RETURN ON OUR INVESTMENT. These highly destructive activities degrade OUR sustainable wealth of salmon, education, research, wildlife watching, and tourism opportunities.

It is way past time to stop opening more and more of OUR lands and ecosystems to the greedy, careless, immoral timber corporations and, instead, bolster protections to OUR old-growth forests and wild areas on the Tongass.

We expect a selection of the "No Action" Alternative (Alternative 1) and allow the vital Roadless Rule to remain intact on OUR Tongass National Forest.

Sincerely,

Janet Fiore

San Francisco, CA 94122

Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

My name is Bob Fischella and I live in Tucson, Arizona.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Bob Fischella

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Clearcutting is exactly the opposite of what we need to be doing to fight climate change. Once again, under the leadership of our current president, it's the exact wrong decision, as it is with nearly every decision he makes.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

Regarding: Public Comment - Alaska Roadless DEIS

I write this letter as a retired, career US Forest Service employee of 36 years, with significant experience in PNW Timber Contracts and NEPA. I am writing to register support for Alternative #1, the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. I am well aware of the history of the Tongass and the Roadless Rule and of the exploitation of the vast forests of the Tongass over decades driven by industry lobbying, rather than careful sustained use planning. My considered reasons for this decision of support are the following:

-The Tongass provides immeasurable value in providing clean water for fish and wildlife habitat that is essential to the economic and ecological health of Southeast Alaska.

-From the decades of logging on the Tongass, over half of the large, old-growth trees have already been harvested from the Tongass; Only about half of what remains is protected by the Roadless Rule.

-The over 9 million acres of undeveloped roadless land in the Tongass protects the Queen Charlotte Goshawk, a subspecies of Northern Goshawk found in southeast Alaska, the Prince of Wales Spruce Grouse, endangered Marbled Murrelets, the largest population of Bald Eagles in the world, numerous other migratory bird species seeing their southern habitats in decline, as well as salmon, moose, and bear all of whom deserve reasonable protection and also play dramatic roles also essential to the economic and ecological health of Southeast Alaska.

-As identified in the analysis, opening roadless areas to more logging and roads are destructive activities that will further fragment the Tongas and eliminate more of the large and more mature trees that these species rely upon, as well as degrade the naturally sustainable wealth of salmon by elimination or degradation of streams and inlets.

-The Tongass is a recognized carbon sink, containing some of the largest areas of intact old-growth temperate rainforest in the world; It is one of the few intact, ancient forests that has been a stronghold of climate resilience.

-Timber sales in the Tongass have historically been deficit operations for the Forest Service and the American Taxpayer, promoted for the sole reason of buoying the Alaskan Timber Industry, providing for clear-cut operations over vast acreages at significant loss to Taxpayers while allowing Federal timber to be exported to Asian markets. This has always amounted to nothing more than using unsustainably harvested resources to bankroll an industry welfare program.

-The No Action Alternative #1 results in saving millions of Federal Tax dollars that would be spent to subsidize deficit timber sales that make absolutely no Economic or Environmental sense.

-Finally, this proposal provides an excellent example of the value and foresight of the Roadless Rule for preventing environmentally damaging and economically wasteful road-building and logging where the access and logging costs vastly exceed the costs for timber sale planning and preparation and any resulting timber revenues, thus requiring unconscionable taxpayer subsidies. Not really a good example of fair-market capitalism at work!

As land and resource managers, we should be looking wisely to the future as well as the present. Harvesting and removing an obviously finite resource in a very unsustainable manner purely for short sighted gain, and at

the cost of numerous species and untold possible further damage to the climate, and to the detriment of water resources that sustain all of us, is extremely UNwise. Please let us be considered, wise and professional in our decision.

In addition, I strongly object to your plans to reduce and remove protections from our national forest's roadless areas. The Roadless Rule, developed with consideration of the future and great foresight, is one of the wisest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but stands to hold decision makers and managers accountable to take the necessary time to consider well the rationale and need to access lands protected under the Roadless Rule. It was intended to make access difficult so that swift and politically motivated decisions could not skip over proper NEPA analysis.

I urge you to select the "No Action Alternative (Alt # 1) and to keep the Roadless Rule intact, maintaining the current protections for all national forests in Alaska.

Sincerely,

Fred Fischer

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Quentin Fischer

It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Robert Fischer

Comments:

My name is Teresa Fischer and I live in Knoxville, Tennessee.

One of the best legacies we can leave to future generations is pristine wild lands. Please consider that before you take any action in favor of the timber industry.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Comments:

In regards to the Tongass National Forest and the consideration to exploit the resources of this forest by first building roadways in a roadless area, please strongly consider choosing Alternative 1 at this time, in order to leave something for our children and grandchildren.

As a former employee of the U.S. Forest Service, I am vividly aware of just how poorly managed are the National Forests. Those which have been opened up to private logging interests are over-catracked, badly eroded, and riddled with diseases. At this current stage in our evolution, I don't believe that government agencies nor private logging interests are able to manage the Tongass National Forest in a way that is truly sustainable and maintains the quality of the forests and and trees for future generations.

I hope that our grandchildren will develop new technologies and new wisdom to better guide them in how to work with these Earth resources in the future.

Additionally, many private logging interests now use defoliant to kill indigenous species of plants which compete with monoculture replants for light and soil resources. Scientific studies are still showing very mixed results in terms of the ability of these toxic herbicides to break down quickly, especially in colder climates. The damage to the biodiversity of the Tongass National Forest would be longterm and irreversible and water quality is likely to be impacted.

Thanks for your consideration,

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

HC724

Dear Alaska Roadless Rule Planning Committee,

I live and work on the lands and waters of the Tongass National Forest. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, Southeast Alaskans rely on the intact habitat that the roadless areas of the Tongass National Forest contain. ***That is why I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule.***
[text bolded for emphasis]

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I strongly oppose any efforts to weaken protections for Roadless areas in the Tongass National Forest and the Chugach National Forest.

The Forest Service needs to continue phasing out old-growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. The Forest Service should focus on restoring degraded watershed and fish streams and carbon sequestration.

Title:

Comments:

My name is Steve Fish and I live in Sitka, Alaska. I've lived in southeast Alaska for 45 years

I depend on the forest to protect the streams which protect and produce the salmon which are relied on by our whole southeast economy. I rely on old growth habitat to keep our deer populations healthy for subsistence, tourism, cultural and ecosystem needs. I value the forest for many things. Its capacity to absorb carbon, a product of man's waste. I value the forest for the presence of wilderness which gives mankind hope and the appreciation of natural beauty and the miracle of creation and regeneration. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, the forest's ability to sequester carbon and mitigate climate change impacts, practicing my culture, the status of the Tongass as a national and global treasure, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. The rule is working fine as it is by balancing the conservation of our fish and wildlife habitat with important development projects.. I depend on roadless areas in the Tongass National Forest for economic livelihood, healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, practicing my culture, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations, fiscal responsibility and saving taxpayer dollars . A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, Chichagof Island, Yakutat forelands, Kupreanof Island, Kuiu Island. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because People who live and work here have spoken out overwhelmingly in favor of maintaining the roadless rule for Southeast Alaska.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should transition to second growth logging invest in creating and maintaining recreation infrastructure improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts devote resources to support our fishing and visitor industries.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

HC1477

Dear Chief Christiansen,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments:

HC405

Dear Roadless Rule Planning Team,

I live in Southeast Alaska, where my lifestyle, the ecology of the forest, and the economy of our communities are all intricately intertwined. I live in this region for the bountiful salmon runs, the beautiful scenery, the clean air and water, and the endless opportunities to recreate in our expansive outdoors. I am one of the 94% of Southeast Alaskans that eats salmon every year. The freshwater streams where salmon and old growth forest of the Tongass provide spawning habitat for these fish, which in turn feed a matrix of bears, birds, insects, and other wildlife that Alaska is so famous for. The health of our economy, which is heavily dependent on the fishing and tourism industries, also depends on the salmon, wildlife and presence of old growth forests. A sustainable future for Southeast Alaska requires protecting expansive areas of intact habitat - in short, it requires keeping our Roadless areas roadless! I urge the Forest Service and the Secretary to protect important salmon spawning habitat, maintain old growth forests for winter deer habitat, and keep the places I like to recreate free of clearcuts and roadbuilding.

WHO I AM: [text bolded for emphasis]

45 year resident of SE Alaska. 27 years in Sitka. 45 years commercial fisherman, hunter, sport fisher, motorized recreation enthusiast & lived 12 years Petersburg & 16 years Fort Alexander

ALTERNATIVE: [text bolded for emphasis] The alternative I support is: no change; keep roadless protection

Because: many uses already allowed; not all of Tongass is currently protected; we do not need to subsidize logging industry to destroy our Tongass

AREAS: [text bolded for emphasis] The areas I want to see protected from road building and old growth timber harvest are:

T77 and all salmon habitat. Protect intact old growth from industrialized logging - allow small scale logging as it is currently allowed

USE: [text bolded for emphasis] Old-growth logging and road building would negatively impact the productivity of the ecosystem that I depend on for the following activities:

Sport fishing, sport & subsistence fishing & hunting; commercial salmon fishing, motorized & non-motorized use of existing logging roads; eco & independent tourism

SUGGESTION: [text bolded for emphasis] The monofocus on increasing timber production in the Tongass is outdated and out of pace with the current economy and lifestyle in Southeast Alaska. Industrial scale harvesting of old-growth forest does not enhance salmon production, visitor industry values, deer habitat, or my recreation experience. I would like the Forest Service to focus on activities that enhance and support our lifestyle of living off the land and the sustainable sectors of our economy. These activities are:

Small scale, local logging & milling; hunting & fishing; forest & foraging; use of existing f.s. roads for recreation & access to variety of areas

The DEIS does not sufficiently analyze the impacts of possible roadbuilding and timber harvest on subsistence use areas. I want the 'community priority' roadless area to contain protections for the areas I use for subsistence hunting, fishing, and gathering. I advocate for no timber harvest and no roadbuilding ***in the following community use areas that I use for subsistence:*** [text bolded for emphasis]

All streams, all old growth forest areas. Baranof Island; Chichagof Island

Additional comments for the Forest Service:

Do not subsidize the corporate logging industry so that they can destroy our old growth which belongs to us all.
Jobs come and go the money goes with the corporate heads...

Sincerely,

Steve Fish

I want to receive a copy of the Draft Environmental Statement

Alaska Roadless Rule

USDA Forest Service, Alaska Region

P.O. Box 21628

Juneau, Alaska 99802-1628

Attn: Roadless Area Conservation; National Forest System Lands in Alaska

Dear Alaska Roadless Rulemaking Team:

My wife, Kari Johnson and I own Kariel Inc.; a small fishing company owning the commercial fishing vessel Kariel, and have fished the waters surrounding the Tongass National Forest, including Yakutat and out to the Bering sea. Kariel Inc has been in business since 1995 but Kari and/or myself have fished various boats in the waters of Southeast Alaska since 1974. We have lived in Petersburg, Port Alexander, and Sitka and have raised 3 children here in Southeast. Two of our children have returned to Sitka to raise their own families; committed to commercial fishing, and consequently, to the productivity of the Tongass Forest.

We are adamantly opposed to an "Alaska-specific roadless rule" which would exempt the Tongass from the protection from most new roadbuilding that all other National Forests depend on. The Tongass does not need more new industrial scale logging, subsidized by the federal government, in order to access the few remaining areas of valuable old-growth forest which also provide habitat for hundreds of salmon streams which thousands of current fishing industry jobs have depended on all along. And the streams, of course, dump into estuarine areas which are home to juvenile black cod, providing the main source of our family's income.

The money wasted by the forest service in new roadbuilding and effectively subsidizing the logging industry would be much better used in restoration work to repair the damage done in the past to salmon streams by logging and roadbuilding practices. Then recommissioning those roads necessary to access second growth areas identified by the Forest Service as the key to their previous priority of a new model of transition to second growth logging. Then the local people and those traveling from down south for the logging jobs would have the number of jobs supportable by a sustainable model of forestry.

Old Growth timber is not renewable, and harvest is not sustainable It takes too long to re create the habitat trashed by old growth logging. Prime habitat is ruined and overall productivity of the forest is degraded by logging. The forest service has already figured out how to transition to a model of second growth logging, and very small scale older tree logging. This would allow the forest to support and cultivate the much more valuable forest resource of salmon, supporting thousands of current jobs, and to support other valuable industries like the variety of tourism businesses providing thousands of current jobs.

Leave the Roadless Rule in place. No exemption from the roadless rule for the Tongass.

Thank You for this opportunity to comment.

Steve Fish and Kari Johnson

Comments:

I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

MATTHEW FISHBACK

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Michael Fishel and I live in Boulder, Colorado.

If you never seen what logging does to the environment of an area then you have no business voting to approve this removal of protections against clearcutting. Get out there and stop destroying our environment.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Michael Fishel

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Amanda Fisher

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Moreover, most of the "easy" areas to log have already been logged: what remains is harder to access, with greater road construction costs and more environmental detrimental impact. The Tongass was notorious for its below cost logging before the Roadless Rule was implemented. To resume logging now is only to heavily subsidize a handful of jobs while making a few powerful entities profits and wrecking a unique, ecologically functioning area just as we head into dire decades of global warming stresses.

My name is Gayle Fisher and I live in Orange, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Gayle Fisher

No Action!

Dear forest Service,

The Tongass Is the largest forest an carbon sink in N. America. It is essential for the very air we breath and our health as humans. Doing anything to threat the Tongass National Forest, like building roads to logging, threatens all of us.

Sincerely,

Georgia Fisher

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, John Fisher

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Maintain protections for Alaska Roadless Rule

Dear Secretary Secretary Perdue,

As someone who has visited Alaska and who treasures its wild places and wishes to preserve the flora and fauna that depend upon wilderness, I am very concerned with the USDA Forest Service's plan to strip Roadless Rule protections from more than 9 million acres of the Tongass National Forest in Southeast Alaska.

I urge you to select Alternative 1, or "No Action," for USFS Docket ID: FS-2019-0023 Alaska Roadless Rule #54511. To do otherwise is reckless and shortsighted.

Sincerely,

Leslie Fisher

Comments:

There are only so many beautiful places left on Earth that have been untarnished by man. Alaska holds a number of them, and this forest is beautiful. How disgustingly irresponsible it would be of us to not only damage one of the most magical places in our country, but to ruin one thing that is helping keep our carbon footprint lower. Logging will soon be replaced by hemp, due to its less than sustainable practices. Are we to be a country that runs constantly behind the curve, or one that designs it. I think it's disgusting that the country of Teddy Roosevelt who so ardently fought for the creation of national parks, so that generations to come could enjoy the beauty of this vast and great country, is trying to become the country that ruins and destroys this beauty for their own pocketbook. It's high time business get out of politics, and as a government you do your job, which is to protect citizens and the land that gives us life.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Yvonne Fisher

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Alaska Roadless Rulemaking #54511

Good morning,

The below comment was recorded on November 23, 2019 at the REI Flagship Store in Seattle, WA as part of a community meeting regarding the Alaska Roadless Rule. Washington Wild was given permission by the individual to submit this comment to the United States Forest Service on their behalf. Please add their comment into the record.

Thank you.

Johnny Fishmonger Executive Director, Wild Salmon Nation

Okay. I'm not going to beat around the clear-cut. Just going to come out first to say, the no action is the way to go here. My name is Johnny Fishmonger. I'm the Executive Director of Wild Salmon Nation and most of our work is protecting wild salmonids up and down the West coast from the steel head runs that still run up little cricks in Ensenada, Mexico to our wild salmon that are strained up and around the corner into the Arctic and populating all the way to the McKenzie river in Northern Canada. When I was 18, I graduated high school in Ballard and the day I got out of high school, I got on a Norwegian crab boat and headed north up to Bristol Bay on the Bering sea to go tender salmon. Our first stop was Ketchikan, our second stop was Sitka. We toiled around Craig and around Prince of Wales and for a kid that grew up in Northwest and had seen all the clear cuts up and down East Lewis County everywhere, I was flabbergasted. I was like "oh my God, they're cutting the hell out of this. This is unbelievable." And you know, here I was in the land of dinosaurs: dinosaur trees, dinosaur cars formations, this ancient geology, and ancient forests. Frank Murkowski and Viking Lumber have never had to retool their plan because Frank Murkowski is not dead. Viking lumber exists because Frank is not dead because Frank Murkowski has a Senator in his pocket. Her name is Lisa. So besides Frank and Lisa and all that, we ran up against was the Southeast conference, which is the chamber of commerce for all of Southeast Alaska and supposed to represent all business in Southeast Alaska and small business and tourists and lumber and fishing and guides. But what do they spend all their time doing? Promoting cutting and mining. We need to replace the Southeast conference with the new progressive chamber of commerce in Southeast Alaska, that represents all of us that are looking forward and thinking progressively about Southeast Alaska. So if any of you are small business owners in Southeast, let's talk. There's a whole bunch of us thinking, we need to replace the Southeast chamber and then we will lead the re we need to replace a Lisa. So no action. That's the alternative.

Hillary Sanders, Member and Engagement Manager

HC6494

11/4/2019

Dear whom it may Concern,

The planet is in [illegible] need of as many forests and places who worked by man as possible. The Tongass National Forest included. Drilling, destroying, and logging [illegible] forest would be a mistake, for it serves countless needs and ecological lifestyles of entire ecosystems. Please, consider the [illegible].

Thanks,

Camille Fisler

Title:

Comments:

My name is Hannah Fitchett and I live in Seattle, WA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I am a student in college, and I care about the future of our biosphere and our place in it. The world needs wild places, untouched by people.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports the recreational opportunities it provides, its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless

Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

My name is Austin Fite and I live in Los Angeles, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Austin Fite

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Joel Fithian

Comments:

I prefer that no changes be made to the roadless rule and that no further acreage is opened in the Tongass for logging, especially old growth forest.

1) It is becoming clear that we need forests such as the Tongass to sequester as much carbon as they can, as we seek to mitigate the worst effects of global climate disruption.

2) When we look at the economic consequences globally, nationally, and locally in Alaska, of climate disruption, the few jobs gained by opening up the Tongass to logging are not worth the catastrophic damages as seas rise, storms grow stronger, and droughts get longer.

3) As a Catholic, I agree with the teaching of Pope Francis in "Laudato Si': On the Care of our Common Home" that each creature is a unique revelation of God. As we destroy some of the last untouched corners of our planet, we deprive future generations of the ability to know that aspect of God's self that is revealed only in virgin forest.

4) Roadless areas are especially important, since the services performed by deep forest are reversed as the forest is cut into smaller and smaller chunks by roads, pipelines, and other clearcuts.

5) The voice of the indigenous people whose traditional lands include the Tongass is important and should matter more than what the Senator or industry groups want.

Thank you for your attention to this matter.

HC3155

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Jerry Fitzgerald

Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Jerry Fitzgerald

Comments:

My name is John Fitzgerald and I live in Kilkenny, Minnesota.

Pollution breathes death. Clean air breathes life. We owe our children clean air and fresh water, a healthy planet and a secure future.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, John Fitzgerald

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, John Fitzgerald

Title:

Comments:

My name is Kat Fitzgerald and I live in Portland, OR. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I am a trained archaeologist and cultural resource management specialist, but I also recognize the immense need to protect natural resources. We can't keep living like humans who don't know any better. We know better now. We have all the information at our fingertips and we're ignoring it for profit, greed, gluttony, glamour. Human egos over endangered species and pristine landscapes, of which we cannot survive without. Shame on whomever supports them being up for sale, for rent, for grabs, for irreparable destruction.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to support small-scale, sustainable logging, restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and

focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Ruth Fitzgerald

Tongass Rule Change

To whom it may concern -

Do not destroy this incredibly valuable ecosystem by allowing roads. This is the rough equivalent of hocking a wedding band for a bump of coke.

We need to be intelligent about what lumber we harvest and why. There are better places than pristine coastal woodlands.

God gave us the Earth to protect, not destroy.

Thanks!

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

The current Roadless Rule should remain and protect all inventoried roadless areas on the Tongass currently protected under the 2001 Roadless Rule, including roaded roadless area. If a new Alaska Roadless Rule is passed, it should protect all inventoried roadless areas on the Tongass currently protected under the 2001 Roadless Rule, including roaded roadless areas.

These lands support healthy salmon populations and are essential for the fishing and tourism economies in Southeast Alaska. As such, they should not be logged or developed. I value the wild public lands in this area. The Tongass is a national and cultural treasure for all Americans. It is one of the last temperate coastal rainforests in the world. These are unique places that should remain pristine and protected.

The Forest Service should focus their resources on active watershed restoration activities rather than further old growth timber harvest. If the Forest Service wants to move ahead with a new Roadless Rule, first it should conduct a comparative analysis of regional revenue and employment from commercial fishing and visitor industries versus timber industry. It should also or alternatively conduct an analysis of the value of old growth forest stands left living vs when they are cut down (for example, carbon sequestration vs timber product).

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Joy Fitzpatrick

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

HC422

Dear Roadless Rule Planning Team,

The health of the Tongass National Forest is important to me. I depend on the Tongass which is a unique and global treasure.

The freshwater streams where salmon and old growth forest of the Tongass provide spawning habitat for these fish, which in turn feed a matrix of bears, birds, insects, and other wildlife that Alaska is so famous for. The health of our economy, which is heavily dependent on the fishing and tourism industries, also depends on the salmon, wildlife and presence of old growth forests. A sustainable future for Southeast Alaska requires protecting expansive areas of intact habitat - in short, it requires keeping our Roadless areas roadless! I urge the Forest Service and the Secretary to protect important salmon spawning habitat, maintain old growth forests for winter deer habitat, and keep the places I like to recreate free of clearcuts and roadbuilding.

WHO I AM: [text bolded for emphasis] Include your name, where you live, and any relevant biographical information. Do you live or work on the Tongass National Forest? What is your relationship to the Tongass?

Ryan Fitzpatrick. I live and work in the Tongass National Forest. I guide visitors through the Tongass to share our wonderful backyard with people looking to enjoy the wilderness of Alaska

PREFERRED ALTERNATIVE: [text bolded for emphasis] The Forest Service will choose how to proceed from a number of different alternatives. If you want the Roadless Rule to remain on the Tongass, write "No Action."

No Action!

WHY I PREFER THIS ALTERNATIVE: [text bolded for emphasis] How would this alternative affect you and Southeast Alaskans?

The Last Frontier should remain as wild and untouched as it has in the past to preserve it for future generations

AREAS: [text bolded for emphasis] Are there specific islands, watersheds, or mountains that you depend on? Name the most important areas that the Roadless Rule to protect. Examples include the Tenakee Inlet, Nakwasina Sound, Fish Bay, Ushk Bay, Northern Prince of Wales, T77 salmon watershed areas, Audobon TNC ecological priority areas, etc.

All 17 million acres should be preserved

USE: [text bolded for emphasis] What activities do you use the Tongass National Forest for? Hunting, fishing, recreation, subsistence, business, tourism, etc.

I live + work in the Tongass. We enjoy hiking, kayaking, recreation, business and tourism.

SUGGESTION: [text bolded for emphasis] How should the Forest Service manage the Tongass National Forest, rather than old-growth clearcut logging? More sustainable alternatives to timber harvest include salmon watershed restoration, visitor industry infrastructure, deer habitat enhancement, young growth thinning, and maintenance of recreation infrastructure such as trails and cabins.

More primitive recreation as well at watershed restoration and protection.

Additional comments for the Forest Service:

Sincerely,

Ryan Fitzpatrick

I do not want to receive a copy of the Draft Environmental Statement

Comments:

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

My name is Stephanie Fitzpatrick and I live in Monroe, North Carolina.

Stop selling our heritage and our future!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Last name: Fitzwater

Organization:

Title:

Comments:

My name is Sandy Fitzwater and I live in Leawood, KS. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I want to protect these National Forests so that life will continue on Earth. All life(animal, plant, bacteria) is in existence because the web of life was developed so that all life relates to the life of all on this planet. What happens to one piece definitely affects all the other pieces.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), hydroelectric development. It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless

Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

I strongly support the action to exempt Alaska from the Roadless Rule. I lived in Ketchikan for nearly 6 years in the late 1990s and was a heavy user of the Tongass. I have been all over the Tongass: by small boat, by float plane, by ferry, and by vehicle on many trips on POW Island.

Roads are a good thing. They provide access and are the great equalizer in making public lands available to the masses. Alaska - and the Tongass in particular - has many places that are protected in conservation system units, prohibiting roads, such as wilderness areas and national parks. I'm good with that. We should have some places that remain intact. But for other places, roads absolutely should be considered as a ways to provide better access for both recreational and economic development.

Roads are particularly critical in the Tongass. For timber, energy development and recreation it is imperative that we have reasonable access. POW is a sportsmen's mecca because it has roads. Roads are good. Roads can be constructed and maintained in a way that is environmentally sound.

In closing, I applaud the Forest Service for implementing an exemption to the roadless rule in Alaska. It's a "good start" and I'd to see the rollback in other places.

Urgent: Protect the Tongass and Chugach National Forests

Secretary Perdue,

My family and I strongly support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1.

We vigorously support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. My family and I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, we very strongly object to your plans to reduce and remove protections from our national forest's roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales.

You are aware that the value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Yours truly,

Signed,

Florence

My name is Doug Flack and I live in New York, New York.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

My name is Martha Flack and I live in Louisville, Kentucky.

It is imperative that we protect the Tongass National Forest. We need these natural areas to combat the effects of climate change. Do not make a bad situation worse by allowing greedy corporations to clear cut these precious trees. Protect our environment, I the natural habitat of many species, and our planet for the many generations to come. Do not rollback the Roadless Rule in Alaska.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC793

Dear Secretary Christiansen,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region - from hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Prioritizing one antiquated industry over other private sectors is bad business, and bad for Southeast Alaska.

My name is Ned Flaherty and I live in Boston, Massachusetts.

Once destroyed, cultural sites and critical habitats can never be recovered.

I totally OPPOSE rolling back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere.

It was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest, so No Action is the only responsible alternative; anything else would ignore overwhelming public opinion, harm Alaskans, and harm taxpayers nationwide.

In Southeast Alaska, tourism accounts for 28% of employment and generates an annual \$1 billion in economic benefit, so it is far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change, even as the state already faces threats from rising temperatures.

Keep Alaska's Roadless Rule, and honor public interest over private profiteering.

No logging in the Tongass National Forest

U.S. Forest Service

RE: No logging in the Tongass National Forest

null

Docket Number: FS-2019-0023

The Tongass is just one of many vanishing wilderness resources.

Its thousand-year-old trees are a refuge for animals needing safe homes. The rare Alexander Archipelago wolf roams there, as well as the nation's largest concentration of coastal brown bears. Bald eagles nest near its waters, and mountain goats climb the crags overhead.

Logging, mining, and development inside the Tongass will destroy a precious wilderness forever.

I urge you to keep 100% of the Tongass subject to the Roadless Rule, and keep this irreplaceable forest pristine.

Sincerely,

Ned Flaherty

HC5465

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Tim Flanery

Ketchikan, AK 99901

Comments: **(Eg: list locations you recreate, or why you value Tongass fish & wildlife)**[Text italicized for emphasis]

Anything we can do to preserve and protect our wildlife. Alaska wildlife fuels the alaskan work force thru tourism which is now our #1 resource.

Also we love to conservatively eat wild foods.

I would like to get more involved in the campaign!

**By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. **[Text italicized for emphasis]

My name is Elizabeth Flanigan and I live in Roseville, Michigan.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Elizabeth Flanigan

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Kathy Flanigan

Tongass National Forest

Hello,

I just want to say from the start that we are TOTALLY OPPOSED to Trump's plan #6 for the Tongass. The very idea of cutting roads upon roads through the pristine old growth forests of Alaska make us sick. We in South Western Virginia cherish our forests and the Appalachian Trail that runs through it. We stand in support of the native people of the Tongass and their culture and traditions and know that they would be threatened by the logging that #6 would bring to the region.

Thank you,

Elaine Fleck

I am writing to submit my support for Alternative 1 for the Roadless Rule - no change to the current plan, keeping all of AK under the 2001 Roadless Rule. At a time when we are charged as a nation with protecting our air, water, forests and landscapes for future generations, nothing is more critical than keeping our oldest forests intact. I urge Secretary Purdue and the USFS to leave the Roadless Rule in place, and ensure that the Forest service is doing all in their power to preserve one of the most critical forest landscapes in our country.

First name: Ryan

Last name: Fleetwood

Organization:

Title:

Comments:

My name is Ryan Fleetwood and I live in Hagerstown, MD. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

The Tongass National Forest is a unique piece of public and protected land. If we open the National Forest to industry and development then we will destroy the ecosystem. America is a country built on the untamed wilderness and that wilderness is shrinking. We need to keep public lands in public hands for the future generations to experience.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), medium-impact recreation (FS cabins, trails, mooring buoys, 3-sided shelters). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, support small-scale, sustainable logging, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and

focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Lois Fleiner

protect our nations air

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Gail Fleischaker

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am writing to express my concern with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

This proposal and the preferred alternative set a slippery precedent that threatens to erase roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

I stand firm to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule was designed specifically to protect remaining old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Reversing this rule and to open roadless areas to more logging is very short sighted: roads will fragment the forest and eliminate more of the big old trees that these animals rely on. Furthermore, intact, ancient forests are strongholds of climate resilience, and the Tongass is one of world's largest.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I fully support the [ldquo]No Action[rdquo] Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Guy Fleischer

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Andy Fleming

Thank you for the previous and current opportunity to submit comments on potential modification of the existing Roadless rule's inclusion of the Tongass NF and Alaska. I appreciate the availability of documents online to review the project start to finish. I am again submitting these on my own behalf, based on my long-term experience as a Fishery biologist, 32 yrs residency in Alaska, and most recently my involvement in the commercial salmon troll fishery in SE Alaska. I previously commented during Scoping for this topic in October 2018.

Since arriving in Alaska in 1986, I was always involved with fish- starting with evaluating fish habitat in Bristol Bay with US Fish and Wildlife Service, through academic and research studies toward my Masters Science at University of Alaska, working as a fisheries biologist conducting habitat studies on Seward Peninsula near Nome with US Bureau of Land Management, then with ADFG as a researcher for 12 years in Interior Ak, then 11+ years as an area fisheries biologist in the Petersburg/Wrangell/Kake area. While there I was involved with fishery management, coho and Chinook salmon research and monitoring, and the permitting/reviewing/commenting for SOA for a variety of resource development issues involving the Tongass NF timber sales, State Forestry, local and transboundary Stikine mining, and hydroelectric power development projects. Since then I have moved-on into commercial salmon fishing.

To be clear, after reviewing project materials on the various alternatives, I remain in support of AlternativeOne, the no-action alternative to continue Alaska's inclusion in and under the Roadless Rule. The Roadless Area Conservation Rule (2001 Roadless Rule) was adopted into regulations at Title 36 of the CFR in January 2001. This nationwide effort was extensive and eventuated in the inclusion of 44.7 million acres, representing about 24% of the total National Forest System lands. This includes about 9.2 million acres of the Tongass, reflecting about 55% of the Tongass. The Roadless Rule has provided a firmer backstop to what might otherwise be unchecked resource development in SE Alaska. The rule was, and is supported by many Alaskans, as gauged

by the overwhelming response at scoping. The areas maintained within IRA's have been integral to life in SE Alaska communities by many individuals for fishing, hunting, gathering and recreating in many cherished areas. Too, they often provide the scenic magic which helps drive and grow demand for "wild places" by tourists, and, maintain high fishery value and desirability for sport- and commercial fisheries in these areas, and provided greater contiguous areas of unfragmented wildlife habitat.

However, areas outside of IRA 's, which were highly valued for timbering, have been harvested through FS administered timber programs that have evolved to more and more deficit logging as timber sale development and road construction costs have gotten higher relative to the market and market value for timber. Concurrent to this has been the general decline in large-scale SE Alaska timbering with only one significant mill in Klawock, on Prince of Wales Island, with small timbering operations continuing to provide for more niche markets. A current trend as seen in recent times has been movement toward helicopter logging and barging logs overseas, more profitable without the workforce needed for traditional logging and milling, and correspondingly less money remaining in the communities.

Concurrent to the decline in timbering has been the increase in need for restoration and rehabilitation in response to poorer stewardship responsibility by the managing agency than should ever have been allowed. Poor quality timber road construction, cutting corners when dealing with road design and stream culvert engineering has left the Tongass with over 1,000 problem stream culverts, that, together with greater sedimentation input risks associated with this temperate rainforest's high rainfall and percentage of roaded area (relative to watershed area), can reduce the total quantity and quality of fish spawning and rearing in stream habitat. Given the critical linkage between fish habitat (access and quality), fish production and sustainable salmon fisheries in Alaska, the significant fisheries economy here in SE Alaska is being weakened and will continue to be weakened by FS Agency inactivity to deal with these culverts and impacted stream habitats. (It is most probable that had the FS carried out concurrent repairs to fish passage problems associated with roads used to access specific timber sales, the return-on-investment (ROI) would be further depressed, making large-scale logging in SE Alaska economics look worse and worse, and harder to subsidize the losses, and continue the program.)

In recent years we have firsthand witnessed downturns in the SE Alaska salmon fishery productivity and a resulting decline in fishery value to participating fishermen, such as myself. When year classes of fish such as pink or coho salmon are impacted, whether by poorer oceanic survival, or from over-fishing/under escaping returning adult salmon, having un-hindered access to quality spawning and rearing stream habitat through properly scaled and operating road culverts, helps to ensure the best outcome from the adult salmon that return and spawn. My point is to denote and speak up for the important and needed partnership between fisheries management and managing and maintaining fish habitat. Clearly, ADF&G is responsible for managing sustainable fisheries, and there is no question that the program of active, in-season management clearly works to escape adult returning salmon to their natal streams. However, continued failings by the U.S. Forest Service in Alaska to comprehensively address Tongass-wide fish passage and habitat function, and become more of an active, co-managing party with ADFG, clearly shows there is room for significant improvement. That will not happen in our lifetimes by expanded timbering access to remaining old growth, but only if, and when funded repair/replacement of "Red" and "Yellow" culverts occurs to maximize fish passage and juvenile fish production.

However, the Regulatory Impact Assessment and the Cost-Benefit Analysis on p43 asserts the following unsupported claim, "The proposed rule and other regulatory alternatives are not expected to have a significant change to the commercial fishing or fish-processing industries over the planning period provided the 2016 Forest Plan protections remain in place." Such a claim cannot, or should not be made in public, as the complexity of forecasting outcomes or behaviors with so many involved factors is beyond reason, particularly to be undertaken while in a dynamic period lately experiencing greater extremes and volatility in climatic conditions. Impacts to commercial fishing (catches) can ultimately be influenced from fresh and marine habitat impacts such as through unforeseen shifts in rainfall, runoff, erosion, sedimentation, variable fish passage/blockage to critical habitat, increases in roading percentage within watershed area (erosional susceptibility), as well as

stream heating/cooling/ freeze-down/ sedimentation impacts upon success or survival through incubation, hatching, rearing, and smelting. Later, survival to oceanic feeding areas and variations in oceanic food web

productivity and distribution, such as the so-called "blob" fine tune the survival to pre-spawn adult life stages when fisheries harvests are then influenced. Furthermore, portions of these returning salmon abundance are harvested, and influence patterns or trends of fishing harvest, which influence business decisions that may alter or sustain fish processing plant operation or employment levels. In conclusion, there is no substantiation to conduct and conclude such a lack of impact, or negligible effect with available information.

There is no way to "cut their way out of this mess-up" by integral stewardship programs with enhanced access to more old-growth timber removal that alternatives number 2-6 would provide. If the roadless rule is lifted by

decision, the US Forest Service will charge ahead and spend their monies on preparing future old-growth timber sales that will benefit few, and not carry -out the huge backlog of repairs and replacements of problematic fish culverts. At this time, no alterations to Alaska's coverage by the existing Roadless Rule should be allowed until the time when the US Forest Service finds and provides the extensive financial support, and executes the repair of the back log of problem road culverts (i.e. "Red" or "Yellow" pipes). There are many other reasons to avoid exempting Alaska that include the ridiculous economics of propping up of a handful of timbering jobs that can be found elsewhere, along with arguments for carbon credits, carbon sequestration, fragmentation of wildlife habitat, and wild lands preservation for future generations. There is much more information and evidence from research and professional experience that can either clearly show or continue to promote public outcry against this poorly thought out action. In essence, please listen...

Again, I appreciate the opportunity to provide comments, and after reviewing the various materials, my position remains opposed to changes to the Roadless Rule with regards to Alaska -

Sincerely,

Douglas Fleming

[POSITION]

[POSITION]

December 16, 2019

To: Earl Stewart, USDA Forest Service, Alaska Region, Ecosystem Planning & Budget Staff & TNF Supervisor,
PO Box 21628, Juneau, AK 99802-1628

From: Douglas Fleming, *Winter:* 78 Sunny Meadow Ln, Philipsburg, MT 59858

Spring/Summer: FV Fearless, PO Box 1267, Petersburg, Ak 99833 tebay1@gci.net

Thank you for the previous and current opportunity to submit comments on potential modification of the existing Roadless rule's inclusion of the Tongass NF and Alaska. I appreciate the availability of documents online to review the project start to finish. I am again submitting these on my own behalf, based on my long-term experience as a Fishery biologist, 32 yrs residency in Alaska, and most recently my involvement in the commercial salmon troll fishery in SE Alaska. I previously commented during Scoping for this topic in October 2018.

Since arriving in Alaska in 1986, I was always involved with fish- starting with evaluating fish habitat in Bristol Bay with US Fish and Wildlife Service, through academic and research studies toward my Masters Science at University of Alaska, working as a fisheries biologist conducting habitat studies on Seward Peninsula near Nome with US Bureau of Land Management, then with ADFG as a researcher for 12 years in Interior Ak, then 11+ years as an area fisheries biologist in the Petersburg/Wrangell/Kake area. While there I was involved with fishery management, coho and Chinook salmon research and monitoring, and the permitting/reviewing/commenting for SOA for a variety of resource development issues involving the Tongass NF timber sales, State Forestry, local and transboundary Stikine mining, and hydroelectric power development projects. Since then I have moved-on into commercial salmon fishing.

To be clear, after reviewing project materials on the various alternatives, I remain in support of Alternative One, the no-action alternative to continue Alaska's inclusion in and under the Roadless Rule. The Roadless Area Conservation Rule (2001 Roadless Rule) was adopted into regulations at Title 36 of the CFR in January 2001. This nationwide effort was extensive and eventuated in the inclusion of 44.7 million acres, representing about 24% of the total National Forest System lands. This includes about 9.2 million acres of the Tongass, reflecting about 55% of the Tongass. The Roadless Rule has provided a firmer backstop to what might otherwise be unchecked resource development in SE Alaska. The rule was, and is supported by many Alaskans, as gauged by the overwhelming response at scoping. The areas maintained within IRA's have been integral to life in SE Alaska communities by many individuals for fishing, hunting, gathering and recreating in many cherished areas. Too, they often provide the scenic magic which helps drive and grow demand for "wild places" by tourists, and, maintain high fishery value and desirability for sport- and commercial fisheries in these areas, and provided greater contiguous areas of unfragmented wildlife habitat.

However, areas outside of IRA's, which were highly valued for timbering, have been harvested through FS administered timber programs that have evolved to more and more deficit logging as timber sale development and road construction costs have gotten higher relative to the market and market value for timber. Concurrent to this has been the general decline in large-scale SE Alaska timbering with only one significant mill in Klawock, on Prince of Wales Island, with small timbering operations continuing to provide for more niche markets. A current trend as seen in recent times has been movement toward helicopter logging and barging logs overseas, more profitable without the workforce needed for traditional logging and milling, and correspondingly less money remaining in the communities.

Concurrent to the decline in timbering has been the increase in need for restoration and rehabilitation in response to poorer stewardship responsibility by the managing agency than should ever have been allowed. Poor quality timber road construction, cutting corners when dealing with road design and stream culvert engineering has left the Tongass with over 1,000 problem stream culverts, that, together with greater sedimentation input risks associated with this temperate rainforest's high rainfall and percentage of roaded area (relative to watershed area), can reduce the total quantity and quality of fish spawning and rearing in-stream habitat. Given the critical linkage between fish habitat (access and quality), fish production and sustainable salmon fisheries in Alaska, the significant fisheries economy here in SE Alaska is being weakened and will continued to be weakened by FS Agency inactivity to deal with these culverts and impacted stream habitats. *(It is most probable that had the FS carried out concurrent repairs to fish passage problems associated with roads used to access specific timber sales, the return-on-investment (ROI) would be further depressed, making large-scale logging in SE Alaska economics look worse and worse, and harder to subsidize the losses, and continue the program.)*

In recent years we have firsthand witnessed downturns in the SE Alaska salmon fishery productivity and a resulting decline in fishery value to participating fishermen, such as myself. When year classes of fish such as pink or coho salmon are impacted, whether by poorer oceanic survival, or from over-fishing/under escaping returning adult salmon, having un-hindered access to quality spawning and rearing stream habitat, through properly scaled and operating road culverts, helps to ensure the best outcome from the adult salmon that return and spawn. My point is to denote and speak up for the important and needed partnership between fisheries management and managing and maintaining fish habitat. Clearly, ADF&G is responsible for managing sustainable fisheries, and there is no question that the program of active, in-season management clearly works to escape adult returning salmon to their natal streams. However, continued failings by the U.S. Forest Service in Alaska to comprehensively address Tongass-wide fish passage and habitat function, and become more of an active, co-managing party with ADFG, clearly shows there is room for significant improvement. That will not happen in our lifetimes by expanded timbering access to remaining old growth, but only if, and when funded repair/replacement of "Red" and "Yellow" culverts occurs to maximize fish passage and juvenile fish production.

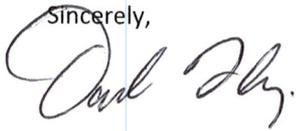

However, the Regulatory Impact Assessment and the Cost-Benefit Analysis on p43 asserts the following unsupported claim, *"The proposed rule and other regulatory alternatives are not expected to have a significant change to the commercial fishing or fish-processing industries over the planning period provided the 2016 Forest Plan protections remain in place."* Such a claim cannot, or should not be made in public, as the complexity of forecasting outcomes or behaviors with so many involved factors is beyond reason, particularly to be undertaken while in a dynamic period lately experiencing greater extremes and volatility in climactic conditions. Impacts to commercial fishing (catches) can ultimately be influenced from fresh and marine habitat impacts such as thru unforeseen shifts in rainfall, runoff, erosion, sedimentation, variable fish passage/blockage to critical habitat, increases in roading percentage within watershed area (erosional susceptibility), as well as stream heating/cooling/freeze-down/sedimentation impacts upon success or survival through incubation, hatching, rearing, and smolting. Later, survival to oceanic feeding areas and variations in oceanic food web productivity and distribution, such as the so-called "blob" fine tune the survival to pre-spawn adult life stages when fisheries harvests are then influenced. Furthermore, portions of these returning salmon abundance are harvested, and influence patterns or trends of fishing harvest, which influence business decisions that may alter or sustain fish processing plant operation or employment levels. In conclusion, there is no substantiation to conduct and conclude such a lack of impact, or negligible effect with available information.

There is no way to "cut their way out of this mess-up" by integral stewardship programs with enhanced access to more old-growth timber removal that alternatives number 2-6 would provide. If the roadless rule is lifted by

decision, the US Forest Service will charge ahead and spend their monies on preparing future old-growth timber sales that will benefit few, and not carry-out the huge backlog of repairs and replacements of problematic fish culverts. Comments:

My name is Elizabeth Fleming and I live in Altadena, California.

Preserving our wild and natural places and spaces is the duty of every American and every human being on this planet. Preserving the environment that protects wild places including no roads is essential. Future generations of humans and wildlife are dependent upon our responsible actions now. Thank you.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Elizabeth Fleming

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, George Fleming

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Laura Fleming

Thank you for the opportunity to comment on the proposal to exempt the Tongass from the roadless rule. I support Alternative 1, to take no action and leave the Tongass under the 2001 Roadless Rule. The Tongass has been my home for more than forty years. During that time, in addition to our family engaging in sport fishing and sport hunting, we have spent thousands of hours in happy forest exploration near our home in Juneau and ranging further afield.

For 13 years I served as a staffperson in the Alaska State Legislature, 2 of those years for a representative from Ketchikan, and 8 of them for a senator whose district ranged from Metlakatla to Yakutat, including Tongass communities large and small. Subsequently, I worked for 12 years doing communications and public relations for the State of Alaska's international seafood marketing arm, supported by the Alaska seafood industry, the State of Alaska, and the U.S. Dept. of Agriculture. I believe I have a passing understanding of the issues, and the forces that come into play in this ongoing debate.

It is my view that Alternative 1 is in the best social, environmental, and economic interests of Alaskans, Alaska communities, and the United States. Subsistence uses by the indigenous people of the region, people who belong to populations who have inhabited the region for hundreds if not thousands of years, are in and of themselves a sufficient reason to select Alternative 1. The great wealth of resources that the rare intact ecosystem of the Tongass can provide for future generations (in addition to the ones presently enjoying it) far exceed in value any timber harvest that could be extracted, even if it were to be further subsidized by more publicly funded roads. It doesn't really pencil out, now that the great 50 year timber contracts to the Japanese are over and so much of the forest has been pulped. Thank you for the opportunity to comment.

Comments:

Dear Secretary Perdue and Chief Christensen,

Please select the "no-action" alternative on the Alaska-specific Roadless Rule and protect all inventoried roadless areas on the Tongass National Forest under the 2001 National Roadless Rule.

The Tongass contains some of the last remaining intact old-growth temperate rainforests in the world, and its value in providing endless recreation opportunities, clean water, and fish and wildlife habitat is essential to the economic, cultural, and ecological health of Southeast Alaska. I urge you to keep the 2001 National Roadless Rule intact and current protections in place on the Tongass National Forest.

The Roadless Rule is among the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve that pristine habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unsustainable taxpayer subsidies.

Lastly, the 2001 National Roadless Rule is well designed and flexible enough to allow for access and development projects. Since 2009, 48 projects have been approved in the Tongass, the majority relating to surface exploration of potential mining and hydropower. The USFS has also taken steps to expedite this approval process, now taking only one to three weeks for the Tongass National Forest.

For these reasons, again, I strongly urge you to select the "no-action" alternative on the Alaska-specific Roadless Rule and keep the 2001 National Roadless Rule on the Tongass.

Thank you

Nathan Fleming

Please keep the Tongass roadless. It is terrible for wildlife and climate change to allow roads as this will lead to resource development and destruction. Do not allow roads, for the sake of our children.

Comments:

My name is Tami Fleming and I live in Omaha, Nebraska.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Tami Fleming

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Ken Flessas

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Claire Flewitt

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

Sirs: I worked as a timber sale preparation forestry technician and forester on the Ketchikan Area (Revilla and Prince of Wales islands), Tongass National Forest.

The Roadless Rule helps protect old-growth habitat and ecosystems for wildlife species like the Prince of Wales Spruce Grouse, Marbled Murrelet and Northern Goshawk, Gray Wolf, and Sitka black-tailed deer.

Opening roadless areas to more logging and roads will continue to fragment the forested landscape and eliminate more of the mature and older growth forests that these animals rely on. Furthermore, intact, old-growth forests are strongholds of climate resilience, and the Tongass is one of world's largest areas left on our planet.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero or even LESS return on investments and may allow timber below base-rates to be sold. This actually happened in the 1980s.

Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, tourism opportunities, and ecosystem services within this period of unstable climatic conditions year-to-year.

Stop opening additional acres to a timber-only focus and instead bolster protections to older growth forests and to remote roadless areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Instead, focus commercial thinning opportunities within existing second-growth forests, which were originally cut under the 50-year long-term timber sale contract: these specific timber age-classes and their acreages need serious tending.

Catherine J. Flick

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Charles Fligel

Butte, MT 59701

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Given the sensitive nature of these forest lands, which are national treasures to protect, why is there a need to begin harvesting in Tongass National Forest? Old growth areas should be off limits and protected from harvesting, both to maintain the ecosystems (both animal and human), and retain them for future generations to enjoy. If harvest yields are the point, there are many areas successfully managed with new growth/replanted forest that can be harvested instead. There is simply no need to expand harvesting any further in this area. Therefore, Alternative #1 is the option to follow. No changes are needed since the arguments are not compelling for modification to continued implementation of the 2001 Roadless Rule as prescribed in the Alaska District Court's Judgement.

Thank you for your attention.

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Greg Flood

Tongass National Forest

To all who should be concerned,

Please leave Tongass National Forest as it is! No roads or construction projects should ever be allowed here, we need this beautiful and important rainforest now more than ever in our battle with climate change! In addition, forest recreation, indigenous peoples, and animal habits will suffer greatly with the destruction of the forest.

Signed by a very concerned citizen,

Sent from my iPhone

You must leave the Tongass alone!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

My name is Patricia Flood and I live in Poughquag, New York.

Trump and his administration are a bunch of lemmings racing towards the first Climate Cliff. The United States uses 17% of the all of the energy on the planet. He has a moral responsibility to not only protect Americans, but the rest of the world. Our energy consumption compared to the rest of the Earth as well. Our actions hurt everyone.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Organization:

Title:

Comments:

My name is Louie Flora and I live in Homer, AK. However, I have lived and recreated in the northern Tongass region on and off since 2004. I value the Tongass for what it has given to its people - sustenance, shelter, recreation, culture and more. I value the carbon storage capacity of this forest ecosystem as we embark on a new human voyage into a world where our activities are rapidly changing the planet's viability. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It shows the Forest Service is responding to the needs and voices of Southeast Alaskan communities. I depend on roadless areas in the Tongass National Forest for deer habitat and subsistence hunting, healthy fish habitat, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, fiscal responsibility and saving taxpayer dollars keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, Admiralty Island, the northern mainland above Port Snettisham (around Juneau), the southern mainland from Bradfield Canal to Dixon Entrance Kupreanof Island, Prince of Wales Island, Yakutat forelands, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest. A full exemption is not in the interests of energy generation projects, mine projects, energy transmission projects as most of these can and have been actively accommodated with the roadless rule in place. The economic drivers of Southeast Alaska - tourism, and fishing will be negatively impacted by widespread road building and old growth logging.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should transition to second growth logging devote resources to support our fishing and visitor industries invest in creating and maintaining recreation infrastructure improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts.

This rule change would run counter to the opinion of the majority of citizens in the region, and without doubt will be revisited by a future congress and/or federal administration.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Joan Marie Florence

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Joan Florence

My name is Joan Florence and I live in Kailua, Hawaii.

I have enjoyed the wild beauty of the Tongass National forest. There is so little wilderness left in America that it is extremely important to preserve this area as it is today. With the drastic climate change, this stunning forest of ancient trees is needed to create clean air && cool down our planet. I strongly urge you to PROTECT TONGASS FOREST fro all roads, mining, drilling && clear cutting. As an American you must preserve my forest!!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

I visited the Tongass this year. It is a treasure and should not be developed; there is not enough to be gained by opening it to the timber industry. Please instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Renee Florence

Alternative one

I am writing to say that I choose the alternative one. Please do not start logging in Tongass National forest to build new roads. The short term growth that this plans to produce is not worth the long term effect of releasing sequestered carbon into the atmosphere. Please do some research on externalities and stop pushing the cost of your riches on the people. Your job is to serve us, not to harm us.

My name is Brian Florian and I live in Beverly Hills, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Brian Florian

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Frank Florio

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing in favor of keeping the roadless rule for the Tongass. Wilderness lands with large areas of intact old-growth forest are irreplaceable once lost to development. The Tongass supports a remarkable ecosystem of salmon and bears, which in turn support the economy of Southeast Alaska. Around \$2 billion a year comes into the region from fishing and tourism, both of which would be harmed by cutting trees. It makes no sense to jeopardize the economy generated by the intact forest by cutting it down. The timber industry must be heavily subsidized to create a few short-term jobs that would destroy salmon streams and the scenic beauty that attracts visitors. Tourists do not come to see clearcut areas of forest stumps and trees are necessary around salmon streams to keep water temperatures cool in summer, prevent exposed soil polluting streams and keep a continuous supply of dead wood in the streams to create sheltering pools for young salmon. The forest is the place we go to hunt deer, but logged forests grow back too dense and dark to allow understory plants to live and without those the deer have no food. The forest is a huge carbon sink soaking up carbon dioxide and helping stave off the warming of our climate at a time when so many forests around the world are being destroyed by fire. For our local economy, for our dinner table, for the future of the planet we cannot afford to develop the Tongass so I urge you to keep it roadless.

Comments:

I strongly oppose your proposed rollback of the important Roadless Rule to allow companies to carve roads into pristine roadless areas of the Tongass National Forest.

It is senseless to cut down ancient, 800-year-old trees and destroy healthy forest ecosystems. This forest provides benefits of far higher value than the "profit" from selling the timber. Destroying parts of the Tongass would also hurt the local economy. The forests support important tourism, commercial fishing, and outdoor recreation, providing many more jobs than logging can provide.

The Tongass is crucial for protecting our climate. It is America's most important national forest for carbon sequestration. This is a time when parts of Alaska are warming at about twice the rate of the average speed around the planet. Protecting this forest advances climate change solutions for our country and strengthens international climate-protection efforts.

These wildlands absorb massive amounts of carbon, and nothing else can match or replace this carbon sequestration capacity. Protecting the Tongass is necessary for protecting the future of our children.

I urge you to reverse the proposed rollback and protect the Tongass National Forest from destructive roadbuilding and logging.

Thank you.

Please maintain protections for the Tongass and Chugach National Forests

Dear Secretary Sonny Perdue,

The Roadless Area Conservation Rule (Roadless Rule) safeguards roughly 15 million acres of roadless forest lands across both the Tongass and Chugach National Forests of Alaska. These publicly owned and managed areas in our national forests have been protected to conserve watersheds, wildlife habitat and recreational values for the last twenty years. Now, because of the petition submitted by the state of Alaska, the U.S. Department of Agriculture is considering removing these protections.

Changing the Roadless Rule for Alaska could irreversibly threaten national forest lands across the state, from ancient forests including thousand-year-old Sitka spruce, western hemlock, and western red cedar. The Tongass is also home to endemic species including brown bear, wolf, eagles, black-tailed deer, and world-class salmon habitat that support commercial and recreational fisheries. Once our roadless areas are gone, they're gone forever.

Please stop the rollback of the important 2001 National Roadless Rule in Alaska and protect our national forests!

Sincerely,

Bobbie Flowers

New York, NY 10011

Tonga's roadless designations

I am strongly opposed to the loss of the Tongass Forest roadless designations Must we destroy all the ancient forest that can never be recreated? Please stop this nonsense.

Thank you, DeanFlugstad Lake City , MN.

HC257

November 1, 2019

The world recently watching in outrage, horror and fear as Brazil allowed its rainforest to be burned for farming. Why? Because the world is in a moment of environmental crisis and the best recommendations for dealing with it are to sequester the carbon in the trees and the soil. The lungs of our planet, they say, is the rainforest. Well the Tongass National Forest is also a rainforest, albeit a northern one and it is hypocritical to criticize the Brazilians and then to immediately propose cutting up to 165,000 acres of old growth in our rainforest. In my opinion, it would be a reckless decision to open up the Tongass to roads for the purpose of cutting down forest when so much forest is burning every year in California and when we need to plant more trees around the world.

I lived in Alaska most of my life and in Juneau for over 10 years. I also lived in Yakutat and I have seen what logging looks like in Alaska. The trees in Alaska grow very slowly due to the poor soil and cool environment and therefore are not easily replaced. The clear cutting done by the logging companies (because they pay more to be allowed to clear cut) is destructive to the surrounding environment and to our global environment. In addition, the trees are often sold to countries overseas. The benefits of logging are limited to a few and the arm from it is long lasting and has a broader impact. I strongly oppose any changes in the roadless rule would just open the door to eventually logging as much of it as possible. As trustees of the forest you are now also trustees of the environment and of the planet. I hope you will take that responsibility seriously and focus on the long term needs and the greater good.

Sincerely,

[Signature]

Comments:

My name is Christine Fluor and I live in Newport Beach, California.

Wild lands need protection. Further destruction of the planet is unacceptable. This plan also destroys cultural sites which is part of this Countrys rich history. Protection is necessary.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Christine Fluor

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Christine Fluor

Comments:

Alaskan Roadless Rule

Please choose alternative 1 on the Alaska roadless rule.

Decide to maintain the established Roadless Rule. Reasonably established two decades ago, the roadless rule protects important fish and wildlife habitat on federal lands, provides clean drinking water, and creates recreation and business opportunities which are crucial to Alaska's communities and economy.

The proposed changes to the Roadless Rule will negatively impact Alaska's Tongass National Forest, the largest old growth forest the United States has. This national forest holds exceedingly significant environmental and cultural significance, and once it is degraded it cannot be replaced. Changing or repealing the Roadless Rule will lead only to environmental degradation in the future. We have seen time and time again, the impacts that logging, even if relatively sustainable, can have on sensitive environments. This forest provides a healthy environment for many endemic plant and animal species, including various salmonids, who have been on a worldwide decline for decades now, and who are a vital to and are responsible for the productivity of these forests.

Across the U.S. we are putting effort toward improving and protecting our natural resources, because of the mistakes we have made and are learning from. Altering the roadless rule in a nearly untouched part of the world, is counterintuitive. As I am studying to be an aquatic biologist, I've learned a lot about all of the mistakes that we as humans have made over the past century, and all of the progress we have made toward fixing the mistakes of past generations. Don't be a part of the history that we look down on, be the part of it that continued to learn from our mistakes and kept this great, vast forest from being damaged.

Sincerely,

Joshua Fluor

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing as an American citizen and a resident of the Pacific Coast, having visited Alaska recently for a dear friend's wedding. I take issue with several assessments made in the proposed rule.

1) While the report concludes that "the circumstances of the Tongass National Forest appear to be best managed through the local planning processes," there are constituencies larger than those bodies with influence at a local level. To wit:

1A) Tongass rivers, lakes, and streams produce 80% of the commercial salmon annually harvested from Southeast Alaska, and a full quarter of the entire west coast catch. This is about 50 million salmon valued at \$60 million annually, and 1 in 10 jobs for Southeast Alaskans. Vast majorities of Alaskans affirm the traditional role of salmon, and the need to preserve habitat, even in challenging economic circumstances. (Source: Tongass Salmon Factsheet R10-PR-40, US Department of Agriculture. https://www.fs.usda.gov/Internet/FSE_DOCUMENTS/fseprd554592.pdf)

1B) Tourism in Southeast Alaska is a far greater source of jobs than logging, which is one-seventeenth the employment engine of the former. (Source: Alaska Southeast Conference.) Logging and habitat removal threatens far more livelihoods than would be created.

1C) The Tongass stores more carbon removed from the atmosphere than any other national forest in the country in its old-growth Sitka spruce, hemlock and cedar trees. It helps protect Alaska, which is warming more than twice as fast from climate change as our planet overall. While the draft EIS claims to be in acting accordance with the latest IPCC recommendations for habitat management, authors of recent IPCC guidelines have explicitly disagreed (Source: Scientific American, <https://www.scientificamerican.com/article/experts-dispute-trump-administrations-rationale-for-alaska-logging/>) In effect, the constituencies to be consulted at this point include all Americans, and the world in general. Damaging pristine, high-sequestration habitat at this critical juncture constitutes an act of global mismanagement.

2) Current assumptions for the sustainable harvesting of wood from the Tongass are based on linear projections of current conditions holding fundamentally the same. In addition to its direct effects of warming temperatures, rising weather volatility, and ocean acidification, the ongoing climate emergency has a second-order effect of *dramatically* increasing the levels of volatility, uncertainty, complexity, and ambiguity in the planning process. Significant unknowns exist, and the evidence of potentially unforeseen ecosystem collapse grows with every IPCC report. The fundamental planning assumptions in the proposed rule do not take these realities into account.

3) The current state of outreach and consultation with local bodies has not acknowledged the input of local native communities, all of whom oppose Alternative 6, and expressed that opposition in a letter to Secretary Perdue in October. (Press Release: <https://www.hia-env.org/wp-content/uploads/2019/10/Tribal-CA-Press-Release-2019.pdf>) Any elected official in Alaska who supports a full exemption, is disregarding their constituents, undermining the public process, and ignoring the sovereign Tribal governments whose people have lived and depended on these lands and waters since time immemorial, said CCHITA President Richard Peterson.

While Alternative 2 is by far the preferable one, as it deals with the core problem of "roadless" area without significantly disrupting ecosystems, the choice of a full exemption is rushed, undemocratic, and criminal in nature. It does not appropriately reflect the desires and priorities of the Alaskan people, who would be altogether justified in waging massive opposition to a federal agency using a sham process to sell out their natural patrimony to timber barons.

Government rests on the consent of the governed. When it begins acting as the vehicle for corrupt interests, it is only right for the people to withdraw their consent.

HC6426

Dear Secretary Perdue,

I am writing to support the ***No-Action Alternative*** for the Draft Environmental Impact Statement on the proposed changes to the Alaska Roadless Rule. I strongly object to your plans reduce and remove protections from roadless areas in the Tongass National Forest. The Tongass contains the largest remaining intact temperate rainforest on Earth, and its value in providing clean water and habitat for fish and wildlife is essential to the economic and ecological health of Southeast Alaska. Furthermore, it's a critical carbon sink to combat climate change.

I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska and across the country.

Sincerely,

I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Li Fo

Comments:

My name is Deborah Fobes and I live in Berwick, Maine.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Deborah Fobes

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC3446

U.S. Forest Service Alaska Roadless Rule Committee:

I have made 3-4 trips to the Tongass for fishing and wildlife viewing. There is more long-term value in these forests being whole than in any short term gain by logging, mining, or otherwise destroying this precious ecosystem.

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for more than 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Robert Foehring

Memphis, TN 38122

Comments:

I oppose the proposal to repeal the Roadless Rule for the Tongass National Forest. I believe that the first alternative, to leave the all of Alaska under the 2001 Roadless Rule, would be the best option. The Tongass National Forest is one of the only temperate rainforests like itself, making it an extremely unique environment with old growth trees, some over 800 years old. Without the Roadless Rule, the forest could be destroyed by logging and construction. This is a dangerous situation, because if the Roadless Rule is lifted, we might lose the Tongass National Forest forever. The number of rainforests around the world are shrinking due to deforestation, and entire ecosystems are being threatened. Many animal and plant life within the Tongass are unique to the area, and without the Roadless Rule protecting them, they could face devastation or extinction. This forest is an irreplaceable environment that the U.S. should protect, not destroy to make money from it.

NO roads in Tongass National Forest!

Dear U.S. Forest Service,

Please select the "no action" alternative on the Forest Service's proposal for Tongass National Forest.

The roads are the beginning of the end for such places. Forests are already stressed from climate change and invasive species infestations -- they need our help, not addition harm.

Let this pristine wilderness endure.

Sincerely,

Madeline von Foerster

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Pat Fojtik and I live in Palos Hills, Illinois.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Pat Fojtik

Keep the roads out. It is not worth it in the long run to destroy all of our life sustaining wild areas including this one. The natural resources are more necessary then what temporary gain will come out of going in and grabbing up what's of value in there.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

HC5795

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,[Signature]

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

HC3946

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Benjamin Foley

Lafayette, CO 80026

HC1446

Dear Chief Christiansen,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

HC4021

U.S. Forest Service Alaska Roadless Rule Committee:

Don't ruin this almost mythical landscape. And in particular you must avoid undermining the compromise effort. Compromise in this arena is difficult, so this should be held up as an example, not tossed aside on a whim.

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Tom Foley

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Valerie Foley

Leave the tongs untouched

It is of utmost importance that the Tongass National Forest remain untouched and definitely roadless. We need to have at least half the Earth remain untouched to even start to plan on having a habitable planet.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.
