My name is Terry Followill and I live in Avondale Estates, Georgia.

The Tongass is a national treasure. It must be protected.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Terry Followill

Title:

Comments:

My name is Paul Folsom and I live in MN. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I am a tsi forest tech. I have a bachelor of science in forestry. I think on an ecosystem level it is important to preserve old growth for habitat, carbon storage, and mosaic structure. I also do not beleive clearcuts are the best answer, And that we should be pursuing multi aged and structurally diverse stands that more resilient to large scale fire and other disturbances.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, the recreational opportunities it provides, its wild salmon populations and the world-class fishing opportunities. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to support small-scale, sustainable logging, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

HC5112

U.S. Forest Service Alaska Roadless Rule Committee:

I am looking forward to retirement and one of my bucket-list items to explore and fish Alaska. I live near the Snake River and the Clearwater River and both were recently closed to salmon and steelhead fishing due to low return numbers of hatchery fish and the possibility of hatcheries not obtaining their target numbers. I don't want that to happen to Alaska.

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Richard Fondahn

HC922

Dear Chief Christiansen,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike and just enjoy in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

Maximum protection to Tongass National Forest

Dear Forest Service:

Please do not permit road building and commercial development in the Tongass National Forest, the world's largest intact temperate rainforest. The Tongass National Forest absorbs more carbon than any other forest in the U.S. It should remain unspoiled and intact because it is a major neutralizer of carbon emissions which drive climate change.

If you must harvest some of the Tongass Forest's trees for timber, then please choose alternative 2, which will cause the least amount of destruction to this irreplaceable forest. Alternative 6 will cause too much destruction to this ancient rainforest which is home to endangered species and to a variety of other important species of flora and fauna.

Our forests must be preserved and protected as much as possible for the health of our planet and all of its inhabitants. Thank you!

Sincerely,

Susan Fong and Family

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Ann Fontaine

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Title:

Comments:

My name is Matthieu Fontaine and I live in Bainbridge Island, WA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I have worked in Alaska for the past five years, and frequently have spent time in Sitka. I am a fisheries biologist and have spent time commercial fishing for salmon throughout southeast Alaska. The Tongas National Forest is a pristine example of how management can protect our national resources. This forest has been largely untouched for the past 90 years, and is essential habitat for numerous species. It is imperative to maintain this area of land, for future generations as well as the endemic species that live there. Alaska is home to me, and it would be a travesty to see this National forest clear-cut.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. My name is Catherine Fontanazza and I live in Milwaukee, Wisconsin.

Stop cutting the trees ,, we need them growing as they are for the planets health.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Catherine Fontanazza

HC5693

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

HC556

Dear Secretary Perdue and Senator Murkowski,

I am currently on a boat cruise off the coast of Kruzof Island, near Baranof Island. On this cruise, I am exploring and learning about the natural habitat of this area that is so special to residents of Sitka like me.

Only 10 miles west of Sitka, Kruzof is widely used as a place for locals to fish, hunt, forage and recreate. From Sea Lion Bay to Shelikof, North Beach to Shoals Point, the Forest Service manages extensive recreation infrastructure such as cabins, trails, and the existing road system for our enjoyment. Sitka black-tailed deer are plentiful, as are chum and pink salmon that run through the numerous stream systems on the island. This island contains productive, intact fish habitat, with three Tongass 77 and four TNC 'conservation priority areas' identified on the island. Mt. Edgecumbe volcano is an incredible day hike, and only a piece of the island's fascinating geologic activity.

Kruzof is prolific and peaceful. We are incredibly lucky to have such a place to work and play so close to town, and many of us visit Kruzof often. I value Kruzof island because:

Currently, Kruzof Island is protected from old-growth clearcutting and road building under the 2001 Roadless Rule. As it stands, the 2001 Roadless Rule safeguards our recreation and subsistence activities on Kruzof. ***It is important to me that the 2001 Roadless Rule remains in place on Kruzof Island, and throughout the Tongass National Forest.*** [text bolded for emphasis] Opening up this area to more clearcutting and roadbuilding will jeopardize my way of life, and will sacrifice the spirit of Sitka that brings so many people to this special place. I do not want to see the 2001 Roadless Rule repealed on Kruzof, or anywhere else in the Tongass. Please protect this land for future generations to enjoy in perpetuity.

Sincerely, Jeanette Forah

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

Please do not let this happen. Have we learned nothing from past destructive habits? We need the Tongass to stay intact. We need to find alternatives to logging.

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Jane Forbes

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Jeff Forbes

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Comments:

My name is Jim Forbes and I live in Evanston, Illinois.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Jim Forbes

HC3508

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Ryan Forbus

HC3806

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Al Ford

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Judith Ford and I live in Hollywood, Florida.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Judith Ford

Comments:

Please. Just say no to roads.

Please do everything in your power to maintain the roadless rule in order to preserve this and other valuable resources.

Biodiversity is essential for the long term health of the planet.

Old growth forests are a significant part of our country's cultural heritage

...and they are almost gone.

Roads deprive the water table.

Roads pollute rivers.

Roads are massive heat sinks

Vehicles:

Pollute the air.

They dump oil, fuel, asbestos, rubber, etc. into the surrounding ecosystems.

They kill wildlife,

They create noise pollution

They are a major source of light pollution.

Old growth forests will never, ever, be again. We cannot bring them back, we cannot plant another one, and there are only a handful of these national treasures still in existence.

As the earth gets warmer, our southern forests will and indeed are burning themselves into extinction. The northern forests will eventually be all we have left.

There are substantially better agricultural alternatives for manufacturing paper and developing composite lumber.

We don't need to mow down our children's future for the sake of fine home building in Asia.

Please do not let shortsighted greed desecrate and destroy one of our last, great, American treasures. In Europe, they have Notre Dame, The Parthenon, literally thousands of ancient revered and holy sites that pre-date the existence of the United States. And they protect them. We...have wilderness. We have majestic ancient forests teeming with life. We have the freedom to wander. We have public land. We have ancient groves of stately fir trees that are more sacred than any cathedral. No one is building a road into Notre Dame to harvest bricks. No one should be building a road into the Tongass National Forest to harvest boards.

Thank you,

Judy Ford

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. This is just another example of how the Trump administration is not only denying climate change. The Trump plan to destroy humanity with uncontrolled climate change is hideous. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Karen Ford

HC5220

U.S. Forest Service Alaska Roadless Rule Committee:

This is a very important law and should not be changed or appealed

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for more than 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Lewis Ford

HC3945

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Robert Ford

HC731

Dear Alaska Roadless Rule Planning Committee,

I live and work on the lands and waters of the Tongass National Forest. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, Southeast Alaskans rely on the intact habitat that the roadless areas of the Tongass National Forest contain. ***That is why I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule.***
[text bolded for emphasis]

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I strongly oppose any efforts to weaken protections for Roadless areas in the Tongass National Forest and the Chugach National Forest.

The Forest Service needs to continue phasing out old-growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. The Forest Service should focus on restoring degraded watershed and fish streams and carbon sequestration.

Keep the Roadless Rule in Place for the Tongass National Forest

Dear Interdisciplinary Team Leader, Alaska Roadless Rule Ken Tu,

I am an outdoor recreation enthusiast writing to express my interest in continuing to protect the Tongass National Forest and its backcountry and roadless areas from unnecessary logging and development.

The Tongass has tremendous value for outdoor recreation in the region, and also provides clean water, clean air, and wildlife habitat, all of which are foundational to the economic and ecological health of Southeast Alaska. Road building, logging, and development should continue to be prohibited in the Tongass's roadless areas through upholding the Roadless Rule.

There are not many wilderness spaces left on this country. Every time I go to wilderness and protected spaces, I am overwhelmed with the beauty of my surroundings. The more we protect them, the more we can share these spaces with more people! Not only is sharing this space important but this is also a huge carbon sink on Earth. If we eliminate it, we are going to have a number of obstacles to overcome in the future.

The Roadless Rule was created after a lot of public outreach. It's a popular and sensible approach to land management.

Sincerely,

Elizabeth Forelle

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Clezell Foreman

Comments:

My name is Lynn Foreman and I live in Chicago, Illinois.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Lynn Foreman

Please maintain protections for the Tongass and Chugach National Forests

Dear Secretary Perdue,

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1.

I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. The Tongass National Forest contains some of the largest intact old-growth temperate rainforest in the world. It has a great value because it provides clean water for fish and wildlife, keeping their habitat healthy. This is important to the economy of Southeast Alaska. Please help to protect this special area of Alaska by keeping the current rules in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forest's roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales.

The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Sincerely,

Signed,
Gloria

Title:

Comments:

My name is Adrienne Forkois and I live in St. Petersburg, FL. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I lived in Sitka in 2017 and loved the majestic forest and waters. The people in Sitka respect nature and the land. Its absolutely beautiful and unlike any other place.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its wild salmon populations and the world-class fishing opportunities, its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc), hydroelectric development. It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, restore salmon habitat that was hurt by past logging practices. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact

analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, fay forman

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

My name is janet forman and I live in New York, New York.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

HC3677

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Michael Formichella

Orleans, MA 02653

HC6002

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Ingar Forsmark

Comments:

I would like to express my strong support for alternative 6, a complete exemption, for the tongass from the roadless rule. I have looked at the impacts outlined in the report and none of the areas outlined are significantly impacted by exempting the tongass. There will still be stringent state and federal rules covering any potential projects should the tongass be exempted. The economy of Southeast Alaska is struggling and any project that could safely bring good paying jobs to the region should be allowed to at least be considered.

Please follow your own research and exempt the tongass from the roadless rule as it clearly shows doing so will not have a significant impact on the forest but may have huge impacts for the communities, transportation systems, and livelihoods of the people who live here.

Thank you for the opportunity to comment on this important issue.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Mary Forst

HC6228

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

I value the Tongass as I have lived there for 8 years.

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

Yes No

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule protects old growth forest for lots of creatures, like the marbled murrelet. Do you know that little bird will fly as much as 35 miles inland to nest?? Considering how little old growth forest there is left in our country, I think it's insane to allow much cutting in there. Forests as they were known 100 years ago hardly exist anymore.

Sure , if you allow cutting some people will have jobs from that. But then the forest will no longer be so desirable and those people won't have jobs anymore. Why cut this forest when they'll soon have to deal with job changes anyway?

Please save more of what we have, while it's still a treasure of a place.

Climate change is a hot button item for me, too, and good forests are a hugely important part of dealing with climate change.

Please choose the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Thanks for your consideration.

Sincerely, Kay Forsythe of Ellensburg, Washington

Sincerely,

Kay forsythe

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC540

Dear Secretary Perdue and Senator Murkowski,

I am a visitor of Sitka, and I am currently on a boat cruise off the coast of Kruzof Island. On this cruise, I am exploring and learning about the natural habitat of the area and how important it is to the visitor industry, commercial fishermen, and locals as well. fishermen, and locals as well. fishermen, and locals as well.

Only 10 miles west of Sitka, it is widely apparent that Kruzof Island is heavily utilized by visitors and local residents alike. Allen Marine boats and small cruise ships pass by the lush shores of the island to watch the fantastic marine animals that frolic in the rich coastal waters, sharing the oceans with many independent fishing guides that lead daily trips to catch the king and coho salmon that are sustained by the prolific feed found off the coast. The beautiful landscape, abundant wildlife, and intact forests throughout the Tongass National Forest are an important part of why I chose to visit Southeast Alaska; these vistas are fast disappearing in the continental United States.

Kruzof Island is currently protected from old-growth clearcut logging under the 2001 Roadless Rule. *It is important to me that the 2001 Roadless Rule remains in place on Kruzof Island, and throughout the Tongass National Forest.* [text bolded for emphasis] This intact temperate rainforest is a sight unique to Southeast Alaska; such lush and varied flora and fauna are rare in other corners of the world.

I want to see Kruzof Island and the Tongass National Forest protected because:

the bears there need us to pay attention.

I do not want to see the Roadless Rule repealed on Kruzof, or anywhere else in the Tongass. [text bolded for emphasis] Please keep this national and global treasure of a rainforest intact for generations yet to come.

Sincerely, Annie Foruria

Comments:

My name is Georgianna Foruria and I live in Sitka, AK. Lifelong resident of Southeast Alaska who appreciates the pristine-while-it-lasts rainforest that I call home. Lifting the ban on roadless rule will open a gateway for death and destruction to our natural habitat that you can not predict nor prevent after the roadless rule is lifted. Keep it in place and mind your own business. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, practicing my culture, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for healthy fish habitat, foraging and gathering wild foods, deer habitat and subsistence hunting, keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, Admiralty Island, Chichagof Island, Revillagigedo Island (near Ketchikan), Kuiu Island, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because There are plans for development that we can't even predict yet, and we will have no way of preventing it for the next generation. Just because you have the majority does not mean you can ruin someone elses habitat for a quick dollar. Growing this amazing temperate rainforest takes thousands of years and it takes only days to destroy.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should transition to second growth logging.

Don't discount our comments, we need you to seriously consider them, as you would be changing the lives of so many people who actually care about the land. Put yourself in our shoes.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

PLEASE

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.
Regards, Jean Forward

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Patricia Foschi

Comments:

I object to the plan by the National Forest to exempt the Tongass National Forest from its "Roadless Rule"

Further road development must be prohibited in the Tongass National Forest. A forest of this age is a critical center of gravity for worldwide biodiversity. Destruction of this natural habitat would impact life across the fish, mammal, and insect kingdoms. Repercussions would impact food chains across North America. Furthermore, development of this precious land would negatively impact the desperately needed sustainable growth industry in the US and Canada. Without appropriate demand the sustainability industry cannot grow. Harvesting more natural resources undercuts the demand for sustainable goods. We must encourage growth in this industry if our national standard of living is to continue. This forest has remained un disturbed for a thousand years, let it remain undisturbed for a thousand more.

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Hello,

I believe it is in the best interest of current and future generations to preserve our National Forests from threats such as logging. Historically, large-scale industrial logging in the Tongass damaged deer habitat and salmon streams, not to mention removed millions of acres of old-growth trees. There will always be some industry wanting to profit off of public lands and resources, so we need to stand firm and say no. Logging will only benefit a small few, while leaving the national forest in its purest form will benefit us all.

Thank you,

Amy

HC860

Dear Secretary Perdue,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

My name is Beverly Foster and I live in Wayne, Pennsylvania.

STOP THE DESTRUCTION OF EVERY LIVING THING ON THE PLANET. WE NEED THE FORESTS.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Beverly Foster

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Brianne Foster

HC861

Dear Secretary Perdue,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC6060

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

Please keep TNF under the Roadless Rule.

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

Yes[Text circled] No

Title:

Comments:

The Tongass stores more carbon removed from the atmosphere than any other national forest in the country in its old-growth Sitka spruce, hemlock and cedar trees. It helps protect Alaska, which is warming more than twice as fast from climate change as our planet overall. The forest holds about 650 million tons of carbon or about half of U.S. carbon dioxide emissions in 2017.

It would be absolutley ridiculous to log this forest. There is no reason - none - that could possibly justify doing it.

I am 100% against logging the Tongass.

Your children and grandchildren thank you.

My name is Lesa Foster and I live in Orlando, Florida.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Lesa Foster

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies. Sorry, I cannot donate - retired Senior Citizen

As an American that enjoys wilderness public lands on a regular basis, I cannot support the dismantling of protections for the Tongass National Forest. We have very few old growth, pristine, natural places left. We need to protect, at all costs, the natural splendor of the Tongass and all the species that reside in it. I support Alternative 1 (no change, keep current protections in place). Please consider this when making your decision. We cannot undo changes we make to this special place.

We've hardly begun understanding America's temperate rainforests, but what we do know is that they have, in each square foot, the richest and most complex biological activity in the world. Clearcutting these trees is not only killing the forest but killing billions of organisms that make up this astoundingly complex interconnective ecosystem that impacts not only the forest but the waterways and ocean as well. Clearcut logging is an unfortunate inevitability right now, but if there are any forests that are to be logged, temperate rainforests are the absolute worst pick.

HC6473

Dear Secretary Perdue,

I am writing to support the ***No-Action Alternative*** for the Draft Environmental Impact Statement on the proposed changes to the Alaska Roadless Rule. I strongly object to your plans reduce and remove protections from roadless areas in the Tongass National Forest. The Tongass contains the largest remaining intact temperate rainforest on Earth, and its value in providing clean water and habitat for fish and wildlife is essential to the economic and ecological health of Southeast Alaska. Furthermore, it's a critical carbon sink to combat climate change.

I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska and across the country.

Sincerely,

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generates an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change, jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

USDA FOREST SERVICE Alaska Roadless Rule update

Please do not open up the Tongass National Forest to logging. The preservation of that forest's old growth is a national jewel and far more valuable to all Americans if left preserve. Logging old growth forests should not be allowed for any reason.

Best,

MICHAEL FOUNTAIN

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Nicole Fountain

HC3965

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

Gary Fournier

Comments:

I urge you to fully exempt the Tongass National Forest from the Roadless Rule. We have enough land permanently set aside already and the National Forest Management Act planning regulations are the proper way to manage the remaining areas on the Tongass as a multiple-use forest.

Other points to consider: Exempting the Tongass from the Roadless Rule will not cause harm to the region's fisheries. Fish habitat is already fully protected on the national forest. Wildlife habitat is also fully protected on the national forest and wildlife is thriving in the young growth stands where timber harvesting has taken place over the last 65-years. Mining, energy development and community access are inhibited by the Roadless Rule. We need a larger timber supply in order to restore more year around jobs. Timber harvesting has not harmed the tourism industry. Most outdoor recreation on the forest takes place in or near the previously harvested areas because of the access provided by the logging roads.

Please restore the Roadless Exemption so that Southeast Alaska can have the same economic opportunities as communities in or near other national forests.

The following text was copy/pasted from an attached letter. The system cannot display the formatting, graphics, or tables from the attached original.

USDA,

It is with great concern that I compose this letter. It seems that the opening up of Tongass National Park is now up for question. The use of the national park for logging purposes would simply destroy a crucial part of untouched land. The world's amount of untouched, preserved habitat is dwindling, and it necessary for human survival to preserve what little is left. We rely on the nutrients, and food, and wildlife, and so much more that these untouched parts of nature provide. However, if they are opened up and exploited for a single resource with minimal value and high cost, the benefits that we receive naturally from these areas are drastically decreased. When the trees are cut down, we immediately lose a major source of oxygen, which is needed now more than ever when the atmosphere is being filled with more and more carbon dioxide. Not only that, but the surrounding ecosystem suffers greatly. The animals that once relied on the trees being logged no longer have a habitat to live in. This means that they are exposed to predators who can overeat a species and lead to an off balance of predator versus prey. The logging of trees might also lead to the extinction of certain species if they rely heavily on the trees or have some connection to the trees. Scientists have found that we are currently in the middle of another mass extinction and there is no need to accelerate the process of extinction for some wood. The life of millions of animals and species is much more valuable than the resources that could come from a few trees.

The Tongass National Park ecosystem relies on the trees it is covered in because it is a temperate rain forest, and the trees are the foundation of the majority of habitats. The deforestation of the national park could be a potential genocide on the life it supports. It also supports much more than life. For example, Tongass National Park generates over a billion dollars in fishing and hunting. That is more that the logging industry will ever bring in, especially in the preliminary stages where millions of dollars will be needed to fund the opening up of the forest. It also supports the migration and growth of mass amounts of salmon, which are a major source of food for humans, and vital to the ecosystem. So clear cutting the forest would affect all terrestrial ecosystems, aquatic ecosystems, food chains, the predator and prey balance, and much more. It might even affect the climate of the area if there are no trees to provide shade and more of the sun's rays are hitting the surface of the earth in the area.

Some may argue that trees are a renewable resource and new ones and it will be just as good. That is not the case. Although trees are technically considered renewable, the rate at which trees can be cut down greatly surpasses the rate that trees can fully regenerate to be useful. Trees take decades to fully grow so that government would be opening up the forest to use the resource once and then let it sit dormant and regrow only to recut it later. The secondary succession would be on a continuous destructive cycle and the ecosystem would never be able to reach it carrying capacity.

If the Tongass National Forrest loses millions of acres to logging, we are setting the world up for failure. We will only be catalyzing the death of the planet. The rate of global warming will increase, the rate of extinctions will increase, and the destruction of a precious ecosystem will be sacrificed for human need. It simply is not worth it.

Sincerely,

Madi Foutz

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Bruce Fowle

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Beverly Fowler

Cottage Grove, WI 53527

Comments:

My name is Beverly Fowler and I live in Bozeman, Montana.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Beverly Fowler

HC5643

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

Please- we need the Roadless Rule in place in the Tongass - protect on streams, watersheds. The salmon that so many of us [illegible] families that fished or still do. It is time to protect old growth!

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

Comments:

We do not need to open up the public lands for logging. The logging industry has shown it cant even care and maintain its privet logging lands. These public lands are Americans jewels and should be preserved and enjoyed by the public not the corporations that destroy them. Teddy and Pinchot set the standers for these lands and we need to follow their standards.

When are we going to realize that we've gone too far... When it's too late?? Because it's about that time. How anyone can truly feel cutting down any trees, let alone the temperate forest, is the right decisions to be making and spending our time and money on, meanwhile we are in the midst of a global crisis, is a Ridicule to who we are, humans. If not for yourself, do it for your children and grandchildren. Don't push the trauma off for the future generations to pay for our consequences. We Can all agree that going through with this COULD have negative effects on the environment, and that it will DEFINETLY NOT have positive affects on the environment, Right? Well we 100% can all agree that not going through with this action will put NO risk of negative implementations on the environment, so with the climate drastically changing, here in Alaska we feel it so forcefully already, I would STRONGLY suggest to take the higher chances of positive outcome choice && be able to live with yourself a little longer and look in your families eyes knowing that out of the millions that are on the ignorant murdering side of our planet and civilization that's killing our loved ones.. that you sir, are part of the proud that did what he could for the ones he loves more than himself and the size of his billfold.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Crystal fox

EPA = Environmental PROTECTION Agency. Pay attention!

I am opposed to rolling back the Roadless Area Conservation Rule (Roadless Rule) wherever applicable. Do not ignore overwhelming public support for the rule & the harm rolling it back would do.

In Southeast Alaska, tourism generates \$1 billion in economic benefit annually and accounts for 28% of employment, while the timber industry accounts for less than 1% of the regional economy.

A roll back would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. Do not to abandon the Roadless Rule; instead, put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Ellen Fox

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Mark Fox

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Michael Fox

Tongass Roadless Rule Protection

To the U.S. Forest Service, ATTN. Alaska Roadless Rule:

As a proud citizen of this country and an avid user of public lands, I would like to express deep concern over the proposed removal of Roadless Rule protection from the Tongass National Forest. Our parks, forests, and wild places are this nation's greatest treasure. In my lifetime, I have seen these treasures dwindle. What little old growth forest we have left, we have because it is protected by the U.S. Forest Service. The Forest Service ensures we are responsible caretakers of this land, protecting against greed and short-sightedness. I fear that the proposed change represents a slippery slope toward allowing the management of public land to be driven by greed for a quick buck. This decision threatens a backslide toward the removal of Roadless Rule (and other) protection from other irreplaceable public lands. As a lover of this country and its wild places, I implore you to maintain Roadless Rule protection of the Tongass National Forest. I want to bring my children to Alaska to walk among ancient trees, dense undergrowth, and native wildlife, not to stare across a barren clear cut.

Thank you for reading my comment; I hope you are able to do what is right for our land and those who love it.

Happy holidays,

Noah Fox

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC5690

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

I want the children and grandchildren to know old growth forests. Our trees are our breath.

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Lurman Foxwell

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

George Foxworth

Fair Oaks, CA 95628

Comments:

My name is Brooke Foxworthy and I live in Zionsville, Indiana.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Brooke Foxworthy

HC3874

U.S. Forest Service Alaska Roadless Rule

Comment Period:

Comment Period Alaska Roadless Rule:

I am writing in support of the 'no action' alternative to leave the Roadless Rule unchanged in Alaska. I am concerned that changes to the rule would lead to greatly expand clear-cut logging of old growth timber and costly road building in undeveloped, wild areas of both the Tongass and Chugach Forests. These activities increase sedimentation, hurt water quality, often block salmon migration, and add to an already large backlog of needed road maintenance and restoration.

Our fisheries and wild forests are critical to the economy of Alaska. To grow these sectors of our economy, we need intact habitat. Please leave the Alaska Roadless Rule in place.

Sincerely,

James Foxworthy

Last name: Fraga

Organization:

Title:

Comments:

My name is Andrea Fraga, and i support the No Action Alternative regarding the Roadless Rule. I believe it is important that we keep the Tongass National Forest intact, with no new roads built. These are the reasons why:

1. Climate change is a very real threat, and opening the Tongass up to large scale extractive activities, in particular old-growth logging, will further excel the harmful affects of climate change.
2. Old-growth logging is not a viable industry in Southeast Alaska, but rather threatens the tried-and-true economies of fishing and tourism, which rely on healthy, intact forests. Opening the Tongass up to old-growth logging, clear-cutting and mining is short-sighted thinking, and has been proven to cost the taxpayers money, rather than boost the economy.
3. Alaskans rely on a subsistence way of life, which is fairly unique these days. An intact Tongass National Forest is the best way to ensure continued subsistence opportunities, which are already under threat from climate change.

When i moved to Southeast Alaska twelve years ago from Southern Oregon, i saw a state with a unique opportunity to learn from the mistakes of the lower 48. States who chose to sell off their natural public wonders, often to the highest foreign bidder, and often at an economic loss for the citizens of that state. We need to preserve what makes Alaska unique - healthy expanses of untouched wilderness and healthy ecosystems.

If nothing else, i ask you to please respect the public comment process, please make it actually mean something, by listening to those who speak in the majority when it comes to the Roadless Rule and the Tongass National Forest.

Thank you for your consideration of my comments,

Andrea Fraga

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC3234

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Bruce Fraidowitz

My name is Natasha Fraley and I live in Santa Cruz, California.

Please protect this critical forest. These are very old trees that provide an ecological services to us all. No one should profit from that forest.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Natasha Fraley

Comments:

I am writing to urgently support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Lynne Frame

HC335

October 23, 2019

Dear Secretary Perdue and Chief Christensen:

I am writing to ask USDAFS to choose the "NO ACTION" alternate on the Alaska-Specific Roadless Rule on the Tongass National Forest.

Since we have a guiding and fishing business here in Southeast Alaska on the Tongass the long term economic and environmental health of the forest and streams are extremely important to our livelihood.

Roads jeopardize salmon spawning habitat which effect the salmon and wildlife which effect our business.

We do not want any more logging on the old-growth timber in the Tongass National Forest. We do not want any more destruction to our fragile forests and egosystem.

Let's keep the 2001 National Roadless Rule on the Tongass and protect our forests in Southeast Alaska.

Sincerely yours,

HC3810

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Gene Franceschina

Middletown, DE 19709

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

Alaska must be spared. We dont need to open up Alaska to timber. WTH legalization of hemp we can use hemp to offset our need for trees. Do not open up Alaska to timber production. The amazon was just devistates and we must preserve old growth forests forever. There is no need when we can maintain the forests in the lower 48 already open to timber. We need more tree planting programs to aid the earth and diminish the carbon in the atmosphere.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

My name is cheryl francis and I live in Carbondale, Illinois.

Trump has no regard for the environment!!the sooner he is removed the better. He has tried to tear down everything we have all worked for in protecting the environment, human rights, you name it. These wild forests are essential on so many levels...not only as carbon storage...but also preserving our own wild nature, which we could do well to get back to. Thank you EARTH JUSTICE for being our warrior on the front lines. CEF

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, cheryl francis

Title:

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, David Francis

HC3388

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Joseph Francis

Seattle, WA 98116

Comments:

My name is Toni Francis and I live in Longmont, Colorado.

Corporate profits today are NOT more important than the well being of Americans. To our government the first priority has to be what is best for our people because the first responsibility of government is to safeguard the people.

Wealthy corporate donors buy government favor in any corrupt administration like the Trump regime and they are able to override the good of the people in the future for profits in the present and for generous campaign donations.

We cant let this corruption go unchallenged. Future generations already face the climate emergency we are starting to experience. Think about Katrina and the wildfires in California. Thats their future only far more extreme, frequent, lethal, and destructive, causing death and displacement on a massive scale. There will be huge evacuations, refugee crises, and chronic chaotic emergencies that overwhelm governments.

No corporate profits today can justify the loss of lives and homes that are already overtaking us now in coastal areas (think Houston, Louisiana) and island communities (Bermuda) here and globally. No we need the roadless rule to protect the old growth trees of the Tongass National Forest in Alaska because they store enormous quantities of carbon dioxide, a potent greenhouse gas while releasing oxygen which we desperately need in our atmosphere.

This is a very big deal. It doesnt get any bigger. This National Forest belongs to the people, NOT this administration or any corporation. The people have to think long term to survive and to prevent extinction of our species.

Leave the Tongass alone no logging or clearcutting. It is irreplaceable for many generations to come.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Rita Franco and I live in Monrovia, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Rita Franco

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

First name: Deb

Last name: Frank

Organization:

Title:

Comments:

My name is Deb Frank and I live in Dittmer, MO. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I am an American citizen who believes that we are the stewards of our lands. As such, we must preserve the rare wild places that have been untouched, or least touched, by the destructive hands of humanity. These rare places are safe havens for many important species of animals and plants such as the Alexander Archipelago Wolf.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for to keep public lands wild for future generations, the high density of incredible wildlife it contains, its status as the largest intact temperate rainforest in the world, its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass, develop more recreational opportunities, like trails and cabins, restore salmon habitat that was hurt by past logging practices. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Last name: Frank

Organization:

Title:

Comments:

My name is Nicole Frank and I live in Fairbanks, AK. I have traveled throughout the state, and lived in both rural and urban Alaska. I've visited Southeast Alaska several times, including a trip to Yakutat, where I went surfing and hiking in the Tongass National Forest. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, and the conservation of resources for future generations.

Out of the alternatives described in the AKRR DEIS, I support alternative 1: no action. The rule is working fine as it is by balancing the conservation of our fish and wildlife habitat with important development projects. We all depend on roadless areas in the Tongass National Forest to keep public lands wild for future generations, for fiscal responsibility and saving taxpayer dollars, and for carbon sequestration and local climate change mitigation, as well as climate change mitigation in the world. The Tongass National Forest is a carbon sink, along with the tundra and permafrost. Alaska is warming on a faster scale than the rest of the US. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because it ignores climate change and the interconnected ecosystems in Alaska and the world. It discounts the voices of Alaskans, especially those who have cultural ties to the region. It is a poor economic decision with negative repercussions overall. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities; it would instead harm our existing rural economies that are based on cultural traditions, as well as the tourism industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries, helping small business opportunities and help with local food production and storage, invest in high-speed internet and good cell service, and invest in creating and maintaining recreation infrastructure and the Marine Highway.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Comments:

My name is Randall Frank and I live in Antelope, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Randall Frank

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Rebecca Frank

Comments:

My name is Rebecca Frank and I live in Hydaburg, AK. I am a basket and cedar weaver. I have been living in southeast Alaska my entire life. I depend on the forest by a source of cedar bark. This forest is a big part of Haida culture, it has helped our way of life. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, hunting, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, practicing my culture, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, practicing my culture, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, the northern mainland above Port Snettisham (around Juneau), the central mainland from Hobart Bay to Stikine River, the southern mainland from Bradfield Canal to Dixon Entrance Kuiu Island, Prince of Wales Island, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because As southeast Alaska natives, we solely depend on the this for our way of life. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts.

SAVE ROADLESS

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

First name: Ellen

Last name: Frankenstein

Organization:

Title:

Comments:

My name is Ellen Frankenstein and I live in Sitka, Alaska. I started working in Sitka almost 30 years ago and five years later I moved here full time. I'm married to a troller, who depends on an intact ecosystem to fish. I walk in the Tongass if not daily, weekly. I pick berries there. We hunt too. My friends and neighbors, Tlingit and Haida, have lived here since time immemorial. Not long after I moved here I began to work with students in the village of Kake, learning two things: a deep love for place, a love of sharing and for depending on the forest and the ocean for food and a deep pain for the industrial logging that was finishing up then. The logging had provided temporary jobs, but the sense of loss and damage, was deep and it resonated. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my hunting, fishing, foraging for wild foods, the peace and solitude I find in nature, recreating, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It shows the Forest Service is responding to the needs and voices of Southeast Alaskan communities. I depend on roadless areas in the Tongass National Forest for economic livelihood, healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations, fiscal responsibility and saving taxpayer dollars . A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, Chichagof Island, Kupreanof Island, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because With the roadless rule intact, we protect our crown jewel for the next generations. We also get to keep using it for subsistence, for recreation, for commercial fishing and tourism. Its not being kept from economic use, were just not reverting to the potential for more industrial logging and resource extraction on a level that damages what we leave for the future. We need the forest to help with the climate crisis and it discounts the voices of Southeast Alaskans.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries transition to second growth logging invest in creating and maintaining recreation infrastructure improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Organization:

Title:

Comments:

My name is Ellen Frankenstein and I live in Sitka, AK. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

These threats, these times we write, call, attend meetings and as needed, protest: remind me not to take whats out the door, around the corner and connected to our sense of home and well being for granted. The Tongass National Forest is an integral to our life. From hiking and birdwatching to hunting and fishing, we use, respect, and care deeply about these public lands and want them in public hands, protected for future generations.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), medium-impact recreation (FS cabins, trails, mooring buoys, 3-sided shelters), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), hydroelectric development. It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass, support small-scale, sustainable logging. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

HC3753

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Aryeh Frankfurter

Alaska Roadless Rulemaking #54511

Roadless Rulemaking,

RE: Alaska Roadless DEIS Comment

Dear Secretary Perdue:

As an American taxpayer gravely concerned with thriving biodiversity, healthy ecology

and future generations, I strongly support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest.

The Tongass is a carbon sink containing some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

I have been fortunate to have visited many of our National Parks, and like millions of Americans and tourists, I have spent time and money doing so, and with that said, I strongly object to your plans to reduce and remove protections from our national forest's roadless areas. The Roadless Rule is one of the smartest and most popular land management policies of the Federal Government. It has preserved some of America's best fish and wildlife habitat, and it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, doug franklin

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

HC5139

U.S. Forest Service Alaska Roadless Rule Committee:

Once lost, salmon habitat like this is never regained. Keep the Tongass roadless.

Larry Franks

BS Fisheries (Salmonid Culture) UW 1979

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Larry Franks

First name: Leah

Last name: Franks

Organization:

Title:

Comments:

My name is Leah Franks and I live in Louisville, CO. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

My family visited the Tongass National Forest in July 2019. We encountered many seasonal and full time workers who were experts and passionate about our country and native wildlife. I understand how lack of protection will eliminate wildlife, resources, and jobs, and will be devastated if the current administration allows this.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, to keep public lands wild for future generations, its status as a national and global treasure, its huge swaths of intact ecosystems and all the biodiversity it contains, the recreational opportunities it provides, its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

I am writing to express my support for ALTERNATIVE 1: take no action and leave all of Alaska under the 2001 Roadless Rule, including the Tongass National Forest. This is a vital ecosystem in our global fight against the increasing levels of CO2 in our planet's atmosphere, and as a teacher who listens to the fears of my adolescent students - they truly worry that they won't have any nature left, no ocean life, no breathable air, no normalcy in the weather, etc. - I would be remiss if I didn't take the time to speak up on their behalf. Thank you for supporting Alternative 1 and taking NO ACTION.

My name is andrew frantz and I live in Rochester, New York.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Glenn Frantz

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Kathe Frantz

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

I have flown over many parts of that area, and seen the large swaths that were previously clearcut. The Roadless Rule put an end to many of the terrible situations, and had massive public support. In addition cruise ship customers don't want to sail in the inland passage and see nothing but cleared land. The no action approach is the best approach, and not selling out to corporate lobbyists.

Title:

Comments:

My name is Kelsey Fraser and I live in Grand Rapids, MI. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I am a passionate protector and advocate for forests and natural areas. We need to leave everything that's still intact untouched -- these forests are valuable and irreplaceable, and we've already destroyed far too much of the earth's ecosystems.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, to keep public lands wild for future generations, the high density of incredible wildlife it contains, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to develop more recreational opportunities, like trails and cabins, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, restore salmon habitat that was hurt by past logging practices. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes.

Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

My name is Robert Fraser and I live in Carmel Hamlet, New York.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Robert Fraser

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Forest Frasier

HC3251

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Kurt Fratzke

Please maintain protections for the Tongass and Chugach National Forests

Dear Secretary Sonny Perdue,

This administration seems to want nothing more than to destroy and develop our National Forests, Wilderness Areas and the wildlife that inhabit these wonderful places. I dont really get why this is under the purview of the Dept. of Agriculture. But my opinion is we need MORE protection for our wild places and the animals that live there. Roads & logging corporations - not necessary to keep this planet healthy. What is necessary at this time is more protection for our wild places - NOT LESS!

Sincerely,

Maggie Frazier

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

My name is Shelley Frazier and I live in Durham, North Carolina.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Shelley Frazier

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, WillieDoris Frazier

"A tree falls the way it leans. Be careful which way you lean."

I oppose the Forest Service's proposal to make Tongass National Forest exempt from the Roadless Rule.

Large roadless and untrammeled ecosystems are important to our American heritage and future. Wildernesses are primitive places set aside by the federal government for the greater good. They provide opportunities for unconstrained primitive experiences, subsistence and intact ecosystems unthreatened from human impact. The regulations surrounding designated wilderness exists to prevent short-sided interests and to protect lands that cannot defend themselves against human sprawl.

Opening up the last remaining roadless lands is to erase our country's history and harm future generations.

In addition, swathes of trees like those in the Tongass give us life. The Tongass in particular accounts for 8% of the carbon stores within the US Forest Service system. Harvesting the trees for commercial gains would pollute the atmosphere and be difficult to reverse.

Thank you,

Ingrid Freaney

Continue protections for the Tongass and Chugach National Forests

Dear Secretary Perdue,

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1.

I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forest's roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales.

The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Sincerely,

Signed,

Frederick

First name: Kailea

Last name: Frederick

Organization:

Title:

Comments:

My name is Kailea Frederick and I live in Petaluma, CA. I visited Southeast Alaska in 2016. I depend on this forest from afar. As one of the last old growth forests left in the world, all people on Earth depend on this forest for its ability to intake carbon dioxide from the atmosphere. I value it for its beauty and ability to provide stability for an inhabitable planet. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my practicing my culture, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, practicing my culture, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations, fiscal responsibility and saving taxpayer dollars . A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, Chichagof Island, Admiralty Island, the northern mainland above Port Snettisham (around Juneau), the central mainland from Hobart Bay to Stikine River, the southern mainland from Bradfield Canal to Dixon Entrance Kupreanof Island, Kuiu Island, Wrangell and Etoin Islands, Prince of Wales Island, Revillagigedo Island (near Ketchikan), Yakutat forelands, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because We need to stop logging fully.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries invest in creating and maintaining recreation infrastructure improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Comments:

NO, as a citizen of the United States, I want the roadless rule to remain in effect so that this irreplaceable national treasure that is the Tongass National Forest, will be preserved for future generations. The trees in this forest are irreplaceable in their current form and at their current age, some as old as 1000years+. This national treasure is one of the largest Old-growth temperate rainforests still in existence.

"The Tongass is the still-thumping heart of a rainforest that once stretched uninterrupted from Northern California through Oregon, Washington, British Columbia and Alaska. The Tongass contains nearly one-third of the old-growth temperate rainforest remaining in the world, as well as the largest tracts of old-growth forest left in the United States. Old-growth temperate rainforests hold more biomass (living stuff) per acre than any other type of ecosystem on the planet, including tropical jungles. The Tongass alone holds 8 percent of all carbon stored in U.S. national forests and is recognized as a globally significant carbon storage reserve.

"Despite the scenic grandeur of the Inside Passage, multiple uses including logging - are allowed on National Forest lands. In fact, the Tongass is the last National Forest to allow large-scale clear cut logging of ancient old-growth trees, and according to draft plan released this year, will continue to permit this outdated practice for another 15 years. In 2015 over 6,000 acres were logged as part of the Big Thorne sale on Prince of Wales Island.

To make matters worse, this is done at a loss to the US taxpayer. One study by Headwaters Economics estimated that taxpayers subsidize the Tongass timber program to the tune of \$20 million per year, or about \$130,000 per timber job.

Despite all the tax dollars spent propping up the industry, the timber industry currently contributes less than 1 percent to the local economy."

<https://www.seacc.org/tongass>

Please do not allow the exemption to the roadless rule and let's preserve the Tongass National Forest. Logging of this precious resource seems to have little merit or benefit while keeping it intact does.

Thank you for your time,

Sincerely, Michael Frederick
Portland, Oregon

I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Mary Fredericks

Comments:

My name is Bryn Frederickson and I live in Landenberg, Pennsylvania.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Bryn Frederickson

HC830

Dear Secretary Perdue,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

Title:

Comments:

My name is Jack Fredrickson and I live in Fargo, ND. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I recently finished an internship with the Forest Service in Sitka, Alaska. I learned about the undoubted importance that the Tongass National Forest provides not only Alaska, but the world.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), medium-impact recreation (FS cabins, trails, mooring buoys, 3-sided shelters), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), hydroelectric development, inter-tie/transmission line construction. It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, support small-scale, sustainable logging, develop more recreational opportunities, like trails and cabins, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

HC1434

Dear Chief Christiansen,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Jim Freeburg

Renton, WA 98056

The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

My name is Donald Freedland and I live in Boynton Beach, Florida.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Donald Freedland

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Nancy Freedland

HC3125

U.S. Forest Service Alaska Roadless Rule Committee:

I am a retired forester, river guide and adviser to Washington State Fish and Wildlife on salmon management. Don't be foolish to believe that short term extractive harvest by special interests provides economic value commensurate with the recreational and environmental benefits provided solely by unique ecosystems like the Tongass and other roadless areas.

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for more than 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Donald Freeman

The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

To whom it may concern,

I strongly support Alternative 1 that takes no action and would leave all of Alaska under the 2001 Roadless Rule, including the Tongass National Forest. As a carbon sink, the National Forests help protect us from a warming climate and help provide us with clean air and water. Once it's altered we can never get it back. Please keep the Roadless Rule in place.

Thank you for your time.

Comments:

My name is Kerry Freeman and I live in Venice, Florida.

Please leave Bear's Ears alone to be enjoyed by future generations.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments:

My name is Tess Freeman and I live in Bend, OR. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

It's important to me to still have wild places that are protected by clearcutting. The Tongass is the last North Pacific Old Growth forest left and needs to be protected.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its status as the largest intact temperate rainforest in the world, the lifestyles of the indigenous communities that the forest supports its status as a national and global treasure, to keep public lands wild for future generations, the high density of incredible wildlife it contains. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Helen Freeman-tozer

Tongass

Dear Sirs I

Would like to go on the record for strictly maintaining the roadless area in the Tongass National Forest. The wild, roadless areas of the Tongass offer critical wildlife habitat and support Southeast Alaskan tourism and fishing businesses, the economic mainstays of the region. Any attempt to increase roads or subsequent logging in this area would be a disgrace!

Sincerely

Patrick Freeny

Comments:

My name is Elizabeth Freer and I live in Scottsdale, Arizona.

Tongass N.F. was established to protect this magnificent forest. It is essential to fight climate change. It is sacred land to the people who have lived there for a millenium. Don't let it be torn down for timber.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Elizabeth Freer

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to urge the Forest Service to adopt Alternative 1: no action, and to leave the Tongass under the full protection of the 2001 Roadless Rule.

The Tongass is not just a national treasure but a global treasure, as such a rare example of a large and intact temperate rain forest. I have hiked within it and was astonished by its beauty and wildlife, and I believe it is very much worth preserving as it is.

As the world warms -- the services this forest provides, sequestering carbon and giving habitat to so much wildlife -- will become even more invaluable. At the same time, the threats the Tongass faces will be greater. This is precisely the wrong time to be undermining those services and amplifying those threats with roads and logging.

I do not believe that this is an issue that should be decided on purely economic terms, but to the extent the economics are driving this choice, the Forest Service should still preserve the current protections. This forest has far more value as an intact and globally-unique tourist draw than as a source of highly tax-subsidized timber.

Keep 'Roadless Rule' Protections for the Tongass National Forest

Dear U.S. Forest Service,

Regarding the Forest Service's plan to eliminate "Roadless Rule" protections for the Tongass National Forest, I urge you to select the "no action" alternative instead.

There are times when we must choose the health and well being of our planet over money, profit and power. This is one of those times.

We have so few truly wild places left on this amazing planet, and we are lucky that in the United States we still have a small piece of true wilderness. This is one of President Theodore Roosevelt's most enduring legacies - saving our places of amazing natural beauty, untouched by human greed and short term gain - for our future generations and for the ages.

Over time the Tongass National Forest will benefit us more in its untouched, natural beauty than cut up and fractured with roads and utilities. Once we slash through the forest for our commercial accesses, we can never reverse our plunder and destruction.

Please do the right thing and select the "no action" alternative to keep the Tongass National Forest as God intended it to be - perfectly wild, pristine, and unmarred by humans.

Sincerely,

Brian Freese

Comments:

Keep 'Roadless Rule' Protections for Tongass N.F.

Dear U.S. Forest Service,

I oppose the Forest Service plan to eliminate "Roadless Rule" protections for Tongass N.F. Please select the "no action" alternative instead.

Tongass is America's wildest remaining national forest with more than 9 million acres of roadless areas. It's home to a wide range of wildlife including Alexander Archipelago wolves, grizzly bears and salmon.

It stores a vast amount of carbon, with centuries-old trees serving as a carbon-reserve lin this time of climate change. Logging releases most stored carbon into the atmosphere.

Your proposal to open Tongass to clearcutting and bulldozing is irresponsible. The Tongass belongs to all Americans and shouldn't be given to the timber industry, which provides only a small num ber of jobs and income in southeast Alaska compared to tourism and fishing - both which rely on intact forests to thrive.

It's more important to save the last remaining roadless forests because your agency fragmented and logged so much of our national forests. Fragmented forests ruin biodiversity and ecosystems developed over millennia.

I also oppose opening any of the 5 million acres of roadless areas in the Chugach N.F. to bulldozing and clearcutting for logging. This is simply a backdoor repeal of the 2001 Roadless Rule, which protects all roadless lands because of the critical role they play in protecting water, wildlife habitat and recreation.

Please - think of the planet's future and that of wilderness denizens by selecting the "no action" alternative to maintain "Roadless Rule" protections for the Tongass and Chugach.

Sincerely,

Lisanne Freese

I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Peter Freiberg

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Title:

Comments:

Dear Secretary Perdue and Chief Christensen,

Please select the "no-action" alternative on the Alaska-specific Roadless Rule and protect all inventoried roadless areas on the Tongass National Forest under the 2001 National Roadless Rule.

The Tongass contains some of the last remaining intact old-growth temperate rainforests in the world, and its value in providing endless recreation opportunities, clean water, and fish and wildlife habitat is essential to the economic, cultural, and ecological health of Southeast Alaska. I urge you to keep the 2001 National Roadless Rule intact and current protections in place on the Tongass National Forest.

The Roadless Rule is among the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve that pristine habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unsustainable taxpayer subsidies.

Lastly, the 2001 National Roadless Rule is well designed and flexible enough to allow for access and development projects. Since 2009 48 projects have been approved in the Tongass, the majority relating to surface exploration of potential mining and hydropower. The USFS has also taken steps to expedite this approval process, now taking only one to three weeks for the Tongass National Forest.

For these reasons, again, I strongly urge you to select the "no-action" alternative on the Alaska-specific Roadless Rule and keep the 2001 National Roadless Rule on the Tongass.

Thank you Alex Freilich Olympia, WA

Comments:

My name is Pam Freilich and I live in Dunbarton, New Hampshire.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Keep the Roadless Rule in Place for the Tongass National Forest

Dear Interdisciplinary Team Leader, Alaska Roadless Rule Ken Tu,

I've never had the opportunity to visit Tongass National forest. But when I have the chance when I'm older, I'm fourteen right now, I will so I can see what a beautiful, healthy, working rainforest is. The largest temperate rainforest in North America and that's a special thing that is important to keep. It used to bring me comfort knowing my generation and future will be able to see a untouched rainforest like the Tongass and the animals that call that forest home. But if you open that land up to clear cutting, which makes up a very small percent of the economy and jobs, it will never be the same for anyone. So please, for the future generations and for the bears, deer, birds and other animals that call Tongass home think ahead about how this will affect Alaska and the environment for future generations. Don't let the Tongass National forest's beauty be a thing of the past, keep the Roadless rule.

Sincerely,

Lori Freire

First name: Elgin

Last name: Fremlin

Organization:

Title:

Comments:

My name is Elgin Fremlin and I live in Spokane, WA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

I lived in Alaska for almost 20-years in Juneau Alaska the capital. I met my wife there and one day will return to live there again hopefully. As we still own a home there. One of the best things about Alaska is the all the wild life and the rain forest. I believe the Tongass is worth protecting and shouldn't be destroyed for a quick buck.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, support small-scale, sustainable logging, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and

focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Michael French

Comments:

My name is Nina French and I live in Seattle, Washington.

We have taken far too much. Leave Alaska alone.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Nina French

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

The Tongass National Forest is both a rare and rich temperate region rainforest with abundant habitat and a deep carbon sink. It deserves total and complete protection because it is so critically needed, so exceptionally rich and vibrant. Rolling back the Roadless Rule and allowing clearcutting constitutes an immoral destruction of this imminently exceptional ecological gem in Alaska!

The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Michael Frey

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Re. Comments on the Roadless Rule

I urge the United States Forest Service to keep the 2001 Roadless rule intact and current protections in place on the Tongass National Forest. The 1000s of miles of roads already built in the Tongass have cost the U.S. tax payers millions of dollars and have caused much environmental damage. According to Taxpayers for Common Sense, the Forest Service has lost 30 million dollars a year providing timber to industry. Much of that loss is the cost of building roads.

Not only have the roads cost the tax payers millions of dollars, the roads have been detrimental to wild life including deer and salmon by fragmenting the forest and creating access to clear cut logging of the last remaining stands of old growth forest.

The economy has changed from the day of destructive unsustainable practice of industrial logging to one that relies on a healthy intact forest that will support a growing recreation business along with providing a healthy habitat for wildlife including salmon and deer.

There is more and more scientific evidence that the Tongass is a huge carbon sink. With climate change threating the globe, it is paramount we understand how our actions of building roads and harvesting old growth timber will magnify the release of carbon into the atmosphere. (see article from the Juneau Empire Feb 19th 2016 From Rock to Forest Southeast Carbon Sink and E&E News Oct.22 2019 Experts Claim Admin used "misinformation" to justify logging)

I urge the Forest Service not to turn back the clock on prudent protections of our public land by exempting the Tongass from the roadless rule. Instead, keep the roadless rule in place saving the U.S. tax payers millions of dollars and conserving an amazing ecosystem for future generations to enjoy and sustainably benefit from.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Are you kidding? Eliminate Roadless Rule in Tongass?

Dear U.S. Forest Service,

I often wonder whose side the Forest Service is on when you try to do things like eliminate "Roadless Rule" protections for Tongass National Forest. It should be more than obvious this is the wrong thing to do for one of our few remaining wild forests.

If it's not broke, don't "fix" it. No Action is what is called for here.

Really, open this pristine forest to clearcutting and logging?

NO, NO, NO!!!!!!!!!!!!!!

The same is true for Chugach National Forest.

Forests are designated "Roadless" to protect these forests for wildlife, protecting pure water, and remote recreation.

NO ACTION, Please.

Sincerely,

Rona Fried

Comments:

I lived in Alaska for about 37 years and during that time worked for Alaska Department of Fish and Game and U.S. Fish and Wildlife Service. The Tongass National Forest is part of the largest remaining temperate rainforest in the world. Some of these trees are over 1,000 years old. Removing protection from the remaining roadless area will allow removal of old-growth areas that provide habitat for wildlife that require these areas, including the Prince of Wales Spruce Grouse, the Queen Charlotte Goshawk, and the Marbled Murrelet (listed as endangered on the International Union for Conservation of Nature's Red List). Five species of Pacific salmon rear and spawn in the Tongass, as do brown bears, wolves, and Sitka black-tailed deer. Building roads fragments habitat, which affects breeding success and seasonal migrations of some species. Logging roads cause erosion that load streams with sediment, destroying anadromous and resident fish spawning habitat and suffocating their eggs. Southeast Alaska is inhabited by indigenous people that have been there for thousands of years and that depend upon the Tongass as a source of food and spiritual sustenance. Logging focused on old growth is not sustainable and old growth forests are a valuable natural resource that are not replaceable. The current roadless areas should be maintained.

The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Roxanne Friedenfels

Alternative 1 would be ideal. However, we all know it's about the money and a portion will be taken for harvest, regardless of public opinion. It's in the best interest to keep as much of this forest and watersheds intact with little disturbance. Alaska is one purest places remaining.

Dear Secretary Perdue,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Rachel Friedland

Comments:

My name is Krystina Friedlander and I live in Lawrence Township, NJ. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

It is heartbreaking to imagine that this expanse of biodiversity, unique land will be exposed, stripped and ruined. At a time when we're trying to find innovative means to sequester carbon and reduce the intensity of climate change, why would we ever release this massive carbon store into our atmosphere?

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its huge swaths of intact ecosystems and all the biodiversity it contains, the lifestyles of the indigenous communities that the forest supports, the high density of incredible wildlife it contains. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive watershed restoration (stream and habitat) to improve and maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers' money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer-funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is America's homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long-lasting, durable solution for roadless areas in Alaska; it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

Hello,

I am writing to express my objection to the proposed rule to exempt the Tongass National Forest from the Roadless Rule.

Having read the explanatory text in the Federal Register, I feel that the economic benefit will not accrue to native Alaskans, nor to Native American communities, but to logging and timber concerns that are not local to Alaska. In addition, the environmental impact of opening the Tongass to roading and logging will cause deforestation and local climate changes, the impacts of which I feel have not been adequately considered by the Department.

In particular, to open the Tongass to roading and logging may introduce invasive species to the Tongass that may have negative impacts both on the health of the forest and the value of the lumber that the Department clearly sees as the economic benefit.

I consider the best option to be Alternative 2, as it increases the extent of Tongass covered by the Roadless Rule while removing acreage that, as a result of previous non-enforcement, has--by fait accompli--become 'roaded roadless' areas.

If Alternative 2 is not to be adopted, I consider the next feasible option to be to abandon the proposed rule and maintain the status quo (Alternative 1).

Stewardship of our natural resources, and conservation of them, is not only ethical and logical and moral, but is the Christian thing to do. As such it is imperative to preserve these wild areas so that the beauty that the Lord created for us is not despoiled by the greed of mankind.

I hope that you will consider my comment in the spirit it is submitted.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Lynn Friedman

Comments:

My name is Marcy Friedman and I live in Ewing Township, NJ. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

As a frequent visitor and lover of Sitka, Ak. I am in awe of the beauty and power of the Tongass.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, the recreational opportunities it provides, its status as the largest intact temperate rainforest in the world, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, restore salmon habitat that was hurt by past logging practices. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. Comments:

My name is Michael Friedman and I live in El Sobrante, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Michael Friedman

It's time to back science instead of political favors. It is frustrating, concerning and embarrassing that our country is not present with almost 60 other nations who have pledged, this week, to reduce emissions. Our government is not representing the wishes of its people where the environment is concerned.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC3820

U.S. Forest Service Alaska Roadless Rule

Comment Period

Comment Period Alaska Roadless Rule:

The Roadless Rule has been instrumental in conserving the Chugach and Tongass National Forest and in supporting their associated fish and wildlife-based industries for almost 20 years. Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77, by selecting the 'no action' alternative. Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. Please do not roll back roadless area protections for habitat that our irreplaceable fish and wildlife populations need to survive.

Sincerely,

Albert Friend

Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Annie Friend

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, David Friend

I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Friend Friend

Comments:

My name is Friend Friend and I live in Lutz, Florida.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

KEEP TONGASS FREE FROM COMMERCIALISM AND BIG POLLUTERS! I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Justine Friend

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Michael Friend

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

Comments:

My name is Karen Friends and I live in Trumansburg, New York.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

HC6121

Dear U.S. Forest Service:

The Roadless Rule has been instrumental in conserving the Tongass National Forest and in supporting its fish and wildlife-based industries for more than 20 years. ***Please uphold the Rule's protections for important fish and wildlife areas, including the Tongass 77.*** [Text bolded for emphasis] Roadless areas are an important source of food, jobs, and income through commercial, subsistence, and recreational fishing. Salmon are part of Alaska's culture and we must protect them and their spawning streams. ***Please do not roll back roadless are protection for habitat that our irreplaceable fish and wildlife populations need to survive.*** [Text bolded for emphasis]

Customize your comment by listing reasons the Tongass is important to you or why you value Alaska Roadless areas: (ex: specific locations you recreate, activities you do, or why you value fish & wildlife) [Text italicized]

Sincerely,

Would you like to volunteer with TU Alaska to Help America's Salmon Forest?

Yes No

Comments:

My name is Payton Friess and I live in Topeka, KS. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

The Tongass National Forest has such a huge impact on the health and well being of ALL beings. It's carbon storage allows us humans to continue to breathe. It is home to much vital wildlife. It is a powerful space that provides inspiration and healing. The absence of the Tongass would have devastating affects- short and long term.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc), low-impact recreation (camping, hiking, hunting, foraging, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes.

Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

HC971

Dear Chief Christiansen,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, John Friestad

My name is Lisa Frieze and I live in Wakefield, Massachusetts.

Thank you for taking a stand and fighting hard for the future of our planet!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Lisa Frieze

Alaska Roadless Rulemaking #54511

Roadless Rulemaking,

RE: Alaska Roadless DEIS Comment

Dear Secretary Perdue:

Keep the Roadless Rule! Why should we American people pay taxes to subsidize timber sales from our national lands? In addition, why ruin this old-growth forest for the profit of a few companies?

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest.

Comments:

As a one-time resident of rural Alaska and a supporter of our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. The proposed rulemaking would be highly detrimental to southeast Alaska's fishing, tourism and recreation industries, which employ far more people than the region's timber industry, and would set a very bad precedent for other roadless public lands in the nation.

I strongly urge you to maintain the integrity of Alaska's roadless areas and the Tongass 77. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever.

Science isn't a slot machine, where you drop in facts and get out truths. But it is a special kind of social activity, one where lots of different human traits-obstinacy, curiosity, resentment of authority, sheer cussedness, and a grudging readiness to submit pet notions to popular scrutiny-end by producing reliable knowledge. --Adam Gopnik, The New Yorker, 30 Nov 2015

The following text was copy/pasted from an attached letter. The system cannot display the formatting, graphics, or tables from the attached original.

Comments on Fisheries and Water Quality Issues in the US Forest Service Draft Environmental Impact Statement for the Alaska Roadless Rule, December 2019.

FINAL 16 December 2019

1. Introduction

1.1 Scope and Importance of Review

I was commissioned in November and December 2019 by The Wilderness Society to review the US Forest Service's Draft Environmental Impact Statement for the Alaska Roadless Rule (https://www.fs.usda.gov/nfs/11558/www/nepa/109834_FSPLT3_4876629.pdf) (herein after, "DEIS"). The Society asked me to prepare comments on water quality and fisheries effects on the Tongass National Forest, as they are addressed, or not addressed in the DEIS, based on best available scientific information and my professional opinion as an aquatic scientist with expertise in freshwater ecology, fish conservation, watershed processes, environmental impact assessment and land and water resource planning. The observations and opinions in this document are expressly my own.

The resource at risk from logging and road construction on roadless lands of the Tongass National Forest is considerable at a regional and national scale (Byrant 2011, Halupka et al. 2003, Bryant and Everest 1998, Everest et al. 1997). Freshwater habitat on the Tongass National Forest produced roughly 25% of Alaska's commercial salmon catch in the past decade, with an average annual dockside landed value of US\$88 million (Johnson et al. 2019). Despite recognized harms to salmon habitat in some watersheds from past timber harvesting and road construction, the Tongass National Forest produces more wild salmon by far than any other national forest in the nation. This globally

impressive productivity is in large part attributed to the extensive area of unlogged, roadless watersheds on the national forest, where ecological integrity water quality, biophysical diversity, and the productive capacity of freshwater habitat for salmon remain high (Halupka et al. 2003, Bryant and Everest 1998, Everest et al. 1997).

The proposed Alaska Roadless Rule would exempt the Tongass National Forest from the 2001 Roadless Area Conservation Rule and thereby remove that rule's prohibitions against road construction and timber cutting on all of the 9.2 million acres of inventoried roadless areas in the Tongass. The DEIS evaluates several other alternatives that provide varying levels of protection for Tongass roadless areas, but none are as protective as the No Action alternative.

The Forest Service's evaluation of impacts to fish habitat and salmon harvest are summarized as follows: "Overall effects to fish habitat are expected to be negligible under all alternatives, because of the strong protections to fish habitats provided by Forest Plan LUDs, Forest-wide standards and guidelines including the riparian management strategy, and the lack of old-growth harvest or associated road construction allowed in the T77 watersheds and TNC /Audubon Conservation Priority Areas" (DEIS ES-15). The DEIS further states that "localized effects on fish habitat may occur, but these are expected to be minimal overall" (DEIS ES-15). Consequently, according to the DEIS, "None of the alternatives are expected to have a significant change to the commercial fishing or fish-processing industries" (DEIS ES-13).

For reasons discussed below, these erroneous assumptions and conclusions in the DEIS are based on a grossly inadequate consideration of the best available science regarding the effects of road construction and logging on aquatic ecosystems.

1.2 Qualifications

I am a consulting aquatic ecologist and watershed scientist with expertise in land management and conservation and restoration strategies for fishes and amphibians, with extensive experience with Pacific salmon, native trout and charr. I also serve as Affiliate Research Professor at Flathead Lake Biological Station, the University of Montana. My expertise is outlined in my CV, which is appended to this declaration.

My education is as follows. I hold a Bachelors degree in Zoology from the University of Montana, and Masters and PhD degrees in Fisheries Science from Oregon State University, where the focus of my graduate research was the cumulative effect of land use and watershed disturbance on freshwater ecosystems and fish populations.

I have 30 years of experience as a research scientist in the field of aquatic ecology, fishery and conservation biology, and watershed science, having held research faculty positions at The University of Montana and Oregon State University. I have more than 40 scientific and technical publications in aquatic ecology, fishery and conservation biology, and watershed science, in professional journals, symposia, books, and book chapters, and

also am author of more than 30 research reports for various institutions and agencies. I have served as peer reviewer or reviewing editor for more than a dozen professional journals and government research publications. I have served on 13 professional and government panels that provided technical guidance about stream and river protection to state and federal wildlife and forest management agencies in three states, including technical panels that advised Oregon state agencies on water temperature standard development, and forestry landslide prevention rulemaking. I later served on Montana governor's scientific panel to inform that state's restoration strategy for threatened bull trout, and participated in Forest Service expert panels assessing the efficacy of regional plans for conservation of freshwater species, including amphibians. I have commented or served as an expert witness in litigation of numerous national forest plans and federal forest project and programmatic NEPA efforts since about 1980. In Alaska, I sponsored a PhD student who studied ecology and conservation headwater trout populations in southeast Alaska (Hastings 2005); contracted with USEPA to evaluate impacts of roads and pipelines in possible mine development in Bristol Bay; and reviewed environmental impact

statements for mine and mine road development in Bristol Bay and the Ambler Mining District of the Brooks Range.

While on the faculty as a researcher at Oregon State University, I was funded to lead a 6-year research project on salmon habitat protection in Oregon coastal rivers. In 1992 I completed my doctoral dissertation on the cumulative effects of land use on salmon habitat in Oregon South Coast rivers. That research focused on the full spectrum of threats to physical habitat of salmon in coastal watersheds, including water temperature, sediment conditions, landslides and road erosion, large wood, and channel dynamics. As the dominant land use in the region, forestry was a primary topic of that research.

For ten years I was a full-time Research Assistant Professor and Research Associate Professor at the University of Montana's Flathead Lake Biological Station, where I continued to conduct research on salmon ecology and freshwater habitat conservation. For 11 years I held the positions (alternately) of Senior Staff Scientist or Conservation and Science Director with the Pacific Rivers Council, where I worked specifically on the interface of scientific information and land management, with considerable involvement in forest management policy development for stream protection and salmon and trout recovery, including in coastal Oregon. My work in particular has focused on the scientific adequacy of federal forest land planning and aquatic conservation policies, and I have special expertise in the manifold impacts on freshwater habitat and salmonid fishes of roads and road development in roadless forested watersheds.

1.3 Overview of Documents Reviewed

In preparing these comments I reviewed relevant portions of the DEIS and other Forest Service planning documents and other reports and articles from the scientific literature, as cited in the text below. In particular in the DEIS, I reviewed material in section 1 on aquatic habitat, soils, and water quality impacts; in section 2 on expected change in

4

salmon harvest and fish habitat; and in section 3 on soils and water, salmon harvest, fisheries, and transportation and roads.

2. Priority Watersheds and the Long-Term Conservation of Salmon Ecosystems

Although salmon in southeast Alaska represent five relatively widely distributed species, homing to natal habitats in combination with a diversity of habitat configurations and conditions has provided a ripe evolutionary field for the emergence of many distinct, locally adapted ecotypes within these species in southeast Alaska (Halupka et al. 2003). This diversity of habitats and locally adapted ecotypes is the very basis of salmon species productivity (Brennan et al. 2019, Schindler et al. 2010). This diversity of habitats and populations serves in turn as the basis of the large trophic and ecological roles that salmon play in ecosystems (Armstrong et al. 2019). This means the conservation of salmon and the manifold roles of salmon in the natural ecosystem and the human economy of southeast Alaska are directly dependent on protection and, where past degradation has occurred, restoration of the full natural diversity of aquatic habitats across the region.

Loss of diversity through increased footprint of human disturbance of watersheds will inexorably reduce the productive capacity of southeast Alaska, and especially the pristine, now roadless watersheds of the Tongass National Forest, for salmon. This fact is well-recognized in the scientific literature (see many aspects of the problem reviewed and cited in the text below), but it is obscured, if not overtly denied, in this DEIS. It seems the DEIS is premised on a covert, unstated, and utterly undocumented assumption that road-building and logging can occur in currently roadless watersheds with no risk of significant harm to aquatic habitat and fisheries. History and the available scientific literature establish clearly that this assumption is wholly untenable. The assumption is also at complete odds with Forest Service planning and policy documents of the past three decades, yet this departure is not explained or reasonably defended in the DEIS.

2.1 Protection of Priority Watersheds is in Question

In recent years the conservation of salmon in the Tongass National Forest has been strategically pinned to the concept of strict protection of a subset of watersheds in the region that are known to have high ecological and fishery values. One iteration is the Tongass National Forest Priority Watershed Classification (https://www.fs.usda.gov/Internet/FSE_DOCUMENTS/fseprd622074.pdf), and another is the so-called "T77" watershed network proposed by a coalition of public interest and fishing industry groups (<http://www.americansalmonforest.org/the-details.html>, http://ak.audubon.org/sites/default/files/t77_subsection_seak_atlas_ch07_human_uses_200dpi.pdf). The DEIS falls short in failing to adequately account for the potential effect of removal of roadless area conservation protections and reclassification of timber suitability on road building and logging in these watersheds, which are heavily keyed to existing roadless areas where habitat, water quality, and watershed conditions remain

5

optimal. Habitat losses and fish populations impacts in these watersheds could disproportionately affect near term salmon production. Other than stating that old-growth harvest will continue to be disallowed in T77 watersheds under the 2016 Tongass Plan, the DEIS is wholly unclear as to the level and kind of protections these priority watersheds would receive under the alternatives. It appears the DEIS is designed to allow new road construction within the boundaries of conservation priority watersheds in order to access timber in adjacent areas, which could be highly detrimental to salmon habitat in these watersheds (see review of the impacts of roads below).

That said, in my opinion the shifting spatial distribution of salmon productivity demonstrated in recent "salmon portfolio" research (e.g., Brennan et al. 2019) calls into question whether a conservation strategy based primarily on protection of these selected watersheds is tenable in the long term. Watersheds that are productive for a given salmon species at the present time may not be those most productive for that species in past decades or centuries, and may not be those that will be most productive in future decades. A triage-based strategy that prioritizes a subset of extant habitat for conservation is warranted when one is considering a tattered landscape with few remaining productive habitats and populations, and the managing agency is in restoration mode. But when the subject is a relatively intact region, and the planning is to program actions that bring intrinsic risk of highly persistent adverse impacts to that habitat (e.g., roadbuilding and logging of primary and old growth forest), protection or restoration will not be the outcome. In fact, the outcome will explicitly be a net loss of habitat and population productivity--with possibly less loss of habitat and populations than if no protection priorities at all had been in place. And the shifting productivity/portfolio research on salmon ecosystems all points to our fundamental inability to anticipate where future production will come from, at least across relatively ecologically intact landscapes such as southeast Alaska.

The portfolio research tells us ultimately that a fixed reserve subset is not a viable means of protecting an existing productive salmon ecosystem, and that characterization certainly applies to the Tongass National Forest. Effective conservation of salmon on those forests will require comprehensive protections that assure no net loss of watershed condition relative to current conditions. That is plainly not the policy put forth in this DEIS, though the DEIS does not make that clear. Rather, the proposed action would risk degrading many watersheds that are currently in pristine roadless condition, while offering no reasoned assurance or defensible evidence that such widespread degradation would be compensated by habitat improvement or restoration elsewhere. Despite efforts in the DEIS to minimize effects through omission and tacit denial, the proposed action is in fact a massive, regional-scale step backward from the level of conservation that salmon enjoy under present forest plans, including the regulatory protection provided by the Roadless Rule.

6

3. Insufficiency of Riparian Management Areas to Protect Streams from Logging and Roads

While somewhat tacit and not stated in a plain way that could be subject to scrutiny and review, it is clear to an informed observer that the DEIS rests on an unfounded grand underlying assumption that logging and roadbuilding can be pursued in roadless areas with no significant or systematic impact on watershed

processes, water quality, fish habitat and fish populations. One rationale for this vague and broad assumption is presumably that riparian protections offered in the Tongass forest plan are themselves sufficient or more than sufficient to fully mitigate any harms that might arise from road building, road use and maintenance, and logging. This is the context within which I evaluate the relevant literature in the following section. Virtually all of the following information is not considered in the DEIS; therefore, these potential and known impacts of logging and roadbuilding are not disclosed to the public therein[mdash]despite that they are widely documented in the Forest Service's own research (as cited below, and further within the reference sections of many of the papers and reports cited) and in the agency's own past planning documents.

Leaving unlogged riparian forests is insufficient to mitigate for the effects of upland logging on streams, contrary to the implications in the DEIS. In the sections below I discuss edge effects on windthrow or blowdown, mass erosion and channel erosion resulting from hydrologic changes caused by logging, the effects of roads altering hydrology and erosion processes, and alteration of groundwater temperature by logging. Each of these categories of impact poses consequences for fish habitat and water quality that need to be analyzed on a regional scale to account for potential cumulative impacts of multiple logging projects that we know, from past experience and common sense, can result from a systematic forest plan policy change, such as proposed removal of roadless areas from protection forest-wide. The DEIS arbitrarily and capriciously dismisses, and fails to substantively and accurately address, the environmental effects I discuss below.

3.1 Soils and Water Quality: Unreasoned Assumptions Wholly Inconsistent with Past NEPA Assessments, Plans and Policies.

The DEIS identifies aquatic habitat and the fisheries supported by that habitat as a "key issue" (DEIS 1-7). However, the document proceeds immediately to eliminate soils and water quality from detailed analysis (DEIS 1-8), with only sparse and grossly inadequate explanation. DEIS takes this inexplicable step despite that the mechanisms by which road construction, road use and management, and logging adversely affect soil erosion and water quality are well understood, and are the very mechanisms that in turn impact aquatic habitat and fish populations. This is the first of many inexplicable and wholly unreasoned skips of logic that allow the Forest Service to skirt the issues of risk of impact to salmon habitat and populations of the proposed action and alternatives in the DEIS. I offer a more detailed review of science pertaining to how salmon habitat is affected by alterations of vegetation, soil and water quality that occur when roadless areas are logged.

7

Specifically, the DEIS (1-8) states that a "preliminary review" of potential soil impacts found that Alternative 6 would increase the amount of land with "high hazard" soils that would be open for commercial logging by 38 percent. This is consistent with a nationwide pattern of relatively high concentrations of "high hazard" or high-erosion risk soils in national forest roadless areas. Indeed, vulnerability of soils to erosion and landsliding is among the major reasons the Forest Service has deferred road construction and logging and in these areas in the past. It is among the principal reasons they remain roadless today. Nevertheless, the DEIS fails to address the environmental consequences of the increased area of "high hazard" terrain in lands allocated for logging on the Tongass. Inexplicably, the Forest Service simply claims that "From a broad standpoint, the impacts to soil characteristics and composition from the proposed alternatives would be the same as disclosed in the 2016 Forest Plan Amendment FEIS due to similar harvest levels and Forest Plan standards and guidelines" (DEIS 1-8), then capriciously denies that further analysis is needed. This claim in the DEIS stands in direct contradiction to the increase in "high hazard" soils in the commercial timber base. In my opinion it is near certain any increase in "high hazard" soils within areas open for commercial logging substantially increases the likelihood of damage to water quality and fisheries from post-logging soil erosion and sedimentation, as further described in my comments below.

The fact that the PTSQ remains unchanged, the reason given by the Forest Service as to why environmental effects related to soil erosion will ostensibly not increase under any alternative (DEIS 1-8) does not mitigate against potential increases in mass failure and soil erosion, for several reasons. One reason is that PTSQ is a "soft target" that does not in fact cap the total area logged in any given time period. For example, the same volume of timber can be drawn from a smaller area of concentrated larger trees, or a larger area of lower-volume and lower value trees. Another is that neither the PTSQ nor any other forest-level timber volume target regulates the specific areas logged within the overall area allocated to timber production. By knowingly

including more high-hazard soils in the commercial timber base, the Forest Service inexorably increases the likelihood of triggering and increasing the incidence of erosion and landslides through errors of identification of erosion-prone sites and inadequate implementation of necessary mitigation measures (those being primarily avoidance of logging in high-hazard locales, see comments below).

For the reasons above, and because soil erosion hazard (including surface erosion, mass failure, and debris flows propagated by landslides) are central causal factors in the harms done by forestry operations to water quality and fishery resources, in my opinion it is arbitrary and utterly indefensible for this DEIS to fail to analyze, consider, and disclose the effects of commercial timber land reallocation and loss of roadless area protection on Tongass National Forest soil, water, and fishery resources.

3.2 Windthrow in Riparian Forests

Logging adjacent to riparian management areas alters the disturbance regime of riparian forests and streams in ways that can adversely affect fish habitat and populations (Moore

8

and Richardson 2012). Logging adjacent to riparian forests often results in increased windthrow of tree within riparian areas (Tongass National Forest Annual Monitoring Report 2007, Tongass National Forest Annual Monitoring Report 2013, Moore and Richardson 2012, Bahuguna et al. 2010, 2012, Rollerson and McGourlick 2001, Everest et al. 1997). Windthrow increased over natural background rates can result in exposure of channels to solar insolation and increased summer temperatures (Macdonald et al. 2003), reduction of future large tree recruitment, and increased channel bed and bank erosion, including landsliding and debris flows (Bahuguna et al. 2010, 2012, Lewis 1998, McDonald et al. 2003).

3.3 Landslides Originating from Upslope Cutting Units

Mass failures, including both shallow rapid landslides and deeper, often slower-moving slump-earthflow failures, are common across the Tongass National Forest, and it is well-established that the incidence of landslides is magnified by logging (Johnson et al. 2000, Everest et al. 1997, Swanston and Marion 1991, Wu and Swanston 1980, Wu et al. 1979). Logging not only directly disturbs soils, but associated vegetation removal renders soils vulnerable to mass movement and mass failure by reducing canopy interception and dispersion of rain and snow, by greatly reducing evapotranspiration and causing

increased soil moisture conditions, and by destroying root strength that contributes to soil cohesion on forested slopes. The DEIS fails to consider and disclose how logging in currently protected roadless areas will impact mass-erosion-prone slopes, hence altering the frequency, magnitude, and distribution of landslides relative to salmonid habitats across the Tongass National Forest.

It is important to recognize that vegetation removal by logging—whether by clearcutting or thinning—[dash]not only causes many landslides on recognized high-erosion risk terrain (which generally includes the steepest part of the landscape) but also increases the incidence of landslides on parts of the landscape that are usually considered to be of moderate or even relatively low risk of landslide erosion (most often because they are not as steeply sloping). This is a critical point, because the only effective means of preventing large increases in landslide occurrence is by identifying locations prone to failure and prohibiting vegetation removal on those sites, and in up-slope areas that contribute drainage to those sites. Some landslide-prone sites occur on areas of the forest with moderate slopes and that are typically not mapped as highly landslide-prone. In many cases no clear surface evidence exists in the field that allows such sites to be identified prior to logging. Because complete avoidance of sensitive sites is impossible, logging will inevitably and cumulatively increase the incidence of landslides in salmon watersheds. The only question is how large the magnitude of increase in landslide erosion will be relative to unlogged watersheds. Previously unlogged roadless areas are likely to show the highest rates of landslide erosion increase if they are logged, because for the most part slopes in those areas have not previously experienced deforested or low-tree-density conditions in recent decades or centuries.

3.4 Headward Channel Expansion Caused by Altered Hydrology

Expansion of headwater channels has been an often-observed cause of post-logging erosion, but has been seldom quantified in Pacific coast watersheds (Frissell 2012). The one study I know of that focused comprehensively on this phenomenon, Reid et al. (2010), makes clear this is a seriously unexamined and too-often overlooked source of sediment delivery to Pacific Coast streams. Reid et al. (2010) reported that second-growth logging of a redwood-dominated forest in Caspar Creek, north coastal California, was followed by a substantial headwater expansion of stream channel density and coalescence of pre-existing discontinuous channels in headwater swales. Despite "robust" riparian buffer strips left in the second round Caspar Creek logging during this study, suspended sediment yields in instrumented tributaries increased significantly after logging. Channel expansion was caused by headward migration of existing channel knickpoints and subsequent channel incision and enlargement, as well as sapping and collapse of subsurface flow macropores and pipes. Acceleration of surface and subsurface channel-forming processes was apparently associated with increased antecedent moisture conditions, soil saturation, and runoff caused by the abrupt reduction of forest canopy interception and evapotranspiration following logging. In addition, back erosion of extant channels increased in linear extent, possibly reflecting increased channel-forming flows possibly coupled with impingement of hillslopes that could have been creeping at faster rates in the years immediately following logging (e.g., see Swanston et al. 1988). Reid et al. (2010) found that channel expansion led to stream density increasing by about 28 percent after logging.

Given that logging of any dense forest cover greatly reduced evapotranspiration of soil water, it is extremely likely the same processes drive erosion, channel expansion and sedimentation of streams after logging of forests of southeast Alaska. Expanded channel networks are associated with persistent increases in peak flow magnitude, which may result from more rapid translation of slower subsurface to rapid surface flow during storms. Erosion, both primary and secondarily associated with expanding or expanded channel networks, may be responsible for sustained elevation of suspended sediment yield and turbidity in Caspar Creek (reported in Reid et al. 2010, Keppeler 2012, Klein et al. 2012, and discussed as a regional concern in the review by Gomi et al. 2005). Expanded channel networks increase surface water connectivity to and sediment delivery from pre-existing erosion sources like landslide scarps and roads, and can itself initiate additional mass erosion through bank collapse and triggering of channel-adjacent landslides.

Reid et al. (2010) observed that boles and living tree roots in riparian forest buffers can partially hinder, but not entirely prevent, channel expansion. Fully controlling channel expansion effects on streamflow, erosion, and sedimentation would require limiting the overall rate of logging within small catchments over time, moderating silvicultural treatments to promote more rapid hydrologic recovery (e.g., via partial cutting rather than clearcutting), and careful consideration of past and future natural events, including wildfire, windthrow, and disease which, independent of or interactively with logging, also alter the hydrologic effects of vegetation.

Roadless areas preserve natural vegetation dynamics and disturbance regimes that maintain catchment hydrology and stream networks within a natural range of variability. Logging as an exotic disturbance in roadless areas is highly likely to alter hydrology such that accelerated stream erosion and stream network expansion result, over a larger area and larger number of watersheds than would occur if roadless areas are protected from logging.

Post-logging fluvial erosion, gullying and channel expansion is a scientifically recognized cumulative impact of logging that affects sediment supply and could potentially degrade salmonid habitat quality in connected waters downstream of headwaters if roadless areas of the Tongass National Forest are logged. This environmental impact has not been addressed or disclosed in the present DEIS.

3.5 Effects of Roads on Hydrology, Erosion and Sedimentation

Roads are well known to alter hydrology and erosion regimes in watersheds of the Tongass National Forest (Everest et al. 1997), just as they do elsewhere (Wemple et al. 2001, Luce and Black 2001, Jones et al. 2000, Trombulak and Frissell 2000). Landslides and gully erosion initiating at or associated with the hydrological alterations caused by roads and landings not only can penetrate and deliver sediment through even very wide riparian forest buffers, they often initiate debris flows that can travel and directly impact aquatic and riparian habitat a great distance downstream from the point of origin. In either case, riparian forest buffers only confer limited protection against the harmful effects of road-caused mass failures, and in larger events, mass failures can virtually obliterate riparian forests, exposing streams to extremes of summer solar insolation and winter freezing, as well as redistributing large wood, scouring existing habitat structure away or burying it under large sediment deposits, and simplifying habitat structure in runout zones.

It is important to recognize that roads not only cause many landslides on recognized high-erosion risk terrain (which generally includes the steepest part of the landscape) but roads and landings often trigger landslides on parts of the landscape that are considered to be of moderate or even relatively low risk of landsliding under natural conditions. This results from the inexorable distortion of flow paths of both surface water and subsurface water caused by distortions of natural slopes and soils by road construction, use, and maintenance. The result is that road system expansion will inevitably expand both the number and area of occurrence of mass failures and associated debris flows and sediment deposits that adversely affect downstream fish habitat on a large scale. The DEIS utterly fails to consider, explain or disclose what the impact will be of road system expansion into currently roadless areas, many of which contain extensive areas of landslide-prone terrain.

Roads also cause chronic, on-going delivery of sediment at road crossings of small and large streams (Wemple et al. 2001, Jones et al. 2000), and sediment delivered even in the

11

smallest headwater streams can be rapidly transported downstream to harm salmonid spawning and rearing areas (Trombulak and Frissell 2000, Everest et al. 1997, Furniss and others 1991). Seldom can sediment discharges at road crossings be completely eliminated; to do so requires extreme care in crossing design and intensive, frequent within-season road maintenance. In fact, some road maintenance activities that are necessary to reduce the risk of catastrophic failure of forest roads, as well as actions to decommission or remove existing forest roads, themselves generate sediment runoff that can impact streams (Switalski et al. 2004, Luce and Black 2001b). Variability in the cause-effect relations between forest roads and stream sedimentation complicates both remedial practices and preventative practices in road construction and management, resulting in continuing high level of uncertainty about the effectiveness of so called "best management practices" (Al-Chokhachy et al. 2016). In contrast to this recognized uncertainty, the DEIS purports, while offering virtually no evidence, that the impacts of new roads on water quality and fisheries in and downstream of roadless areas will be somehow nonexistent.

The widespread, systemic failure or inadequacy of existing road maintenance resources to mitigate harm from sediment pollution (see Gucinski et al. 2001), especially at road crossings and other near-stream road segments, is one of the major reasons the US Forest Service implemented the Roads Policy and Roadless Rule nationally (USDA Forest Service 2000). All national forests, including the Tongass, remain unable to adequately maintain the existing road system to reduce its ongoing and future harmful impact on aquatic resources and fisheries. It is clear on the face of it that proposed elimination of Roadless Rule protection on the Tongass, and potentially the Chugach National Forest, is intentionally designed to allow expansion of the existing road network. The DEIS offers no rationale for how harms to the overall road system will be reduced in the face of road system expansion that is supported by the proposed suspension of the Roadless Rule.

Roads may be correlated with watershed condition, but it is important to recognize that such a correlation does not necessarily mean that "fixing" roads will alleviate all of the correlated effects (Al-Chokhachy et al. 2016, Frissell 2012, McDonald and Coe 2007). Road density integrates at least two major and separate categories of phenomena that contribute to erosion and sediment delivery (Trombulak and Frissell 2000). The first is erosion and sediment entering surface waters that is generated by the road itself and operations on the road. This category includes secondary hydrophysical effects of roads, including landslides and gullies that initiate because roads disturbed natural drainage pattern, and maintenance-related runoff. This first category is targeted by road remediation and mitigation measures that reduce erosion or sediment delivery to streams from

roadways (Al-Chokhachy et al. 2016, Switalski et al. 2004). The second category is indirect: the erosion and sedimentation that are generated by land use actions and practices that are either supported by or incidental to the road network, as discussed above. Those phenomena in the second category are direct ground disturbance from timber felling and yarding, accelerated windthrow around cutting unit margins, and channel extension, gullying, and bank erosion initiating as a consequence of extensive vegetation removal in the catchment. These erosion and sediment sources are not mitigated by road management measures.

12

The spatial arrangement of road networks on the landscape relative to slope stability, soil erosion proneness, and stream network locations act to codetermine the extent of impairment of downstream fish habitat by road-generated erosion and sedimentation (Al-Chokhachy et al. 2016, MacDonald and Coe 2007, Jones et al. 2000, Trombulak and Frissell 2000). Within the Pacific Coastal mountains and the Pacific Northwest more broadly, existing roadless areas are often associated with the highest-quality fish habitat, in part because of the limited spatial extent of road impacts and relatively few road crossing locations in their catchments. As a result, watersheds with a high proportion of roadless area tend to be relatively high in fish abundance, salmonid diversity and production, and roadless areas thus are of extreme value in the long-term conservation of salmon and trout populations throughout their ranges (Dellasala et al. 2011, Frissell and Carnefix 2007, Hitt and Frissell 2004, Loucks et al. 2003, Trombulak and Frissell 2000, Baxter et al. 2000). Despite that the proposed suspension of the Roadless Rule is explicitly intended to allow the expansion of the logging road network into presently roadless areas in Tongass National Forest watersheds, the DEIS utterly fails to explain how road system expansion will not be associated with more widespread impacts of salmon streams and more extensive deterioration of high-quality salmonid habitat.

Because road systems span multiple watersheds across large areas of national forest, because their adverse impacts cannot be completely avoided or remediated, and because harms to aquatic ecosystems accrue over many decades and are often triggered or exacerbated by natural events like winter storms and summer drought, as well as by climate change that affects storms and drought at regional scales, the cumulative impacts of expansion of road systems must be addressed at the scale of the national forest or a major portion of a national forest. That is, the cumulative effects of road system expansion into presently roadless areas on fish habitat and fisheries simply cannot be adequately analyzed, disclosed, or effectively remediated at the scale of individual timber or road construction projects (Selva et al. 2015, Hitt and Frissell 2004, Trombulak and Frissell 2000). For example, in many cases existing Forest Service roadless areas act in concert with National Parks, Wilderness, or other permanent land protections to secure fish habitat and other conservation values in a larger downstream stream and river network (e.g., Frissell and Carnefix 2007, Hitt and Frissell 2004, Loucks et al. 2003, Martin et al. 2000, Noss et al. 1999). This fact is a major underlying reason for the Forest Service's decisions to implement the Roadless Rule (Turner 2006, Martin et al. 2000, USDA Forest Service 2000) and Roads Policy as directives systematically augmenting national forest plans and planning procedures across the nation.

3.6 Water Temperature Alteration from Upslope Logging

Logging alters the evapotranspiration demand by directly removing vegetation. At least for the initial decade after logging, until vigorously growing second-growth trees attain significant cover, soil and groundwater tend to increase because vegetation is using less water. Moreover, the removal of canopy cover can expose soils to direct solar heating,

13

and areas of shallow groundwater may warm to a greater degree than they did under full forest cover.

Pollock et al. (2009) found that mean and summer mean and maximum temperature across 40 small streams on the Olympic Peninsula in Washington was substantially higher in streams draining watersheds with a higher proportion of cumulative logged area catchment-wide. The catchment area logged relationship was significantly stronger than the relationship to riparian forest removal by logging. Many streams with high canopy shade

warmed substantially when more than half of their catchment area was logged. The results strongly suggest that factors other than direct canopy shade over the stream can drive water temperatures; these may include canopy opening from landslides and debris flows, or may indicate warming of shallow groundwater after extensive loss of soil canopy cover, or both. In either case, riparian buffers failed to protect streams from substantial temperature changes associated with logging.

Macdonald et al. (2003) found that headwater tributaries in BC logged with buffer strips of a wide range of widths all warmed 4-6 degrees C in summer compared to streams in unlogged watersheds. Part of this warming was associated with shade loss and post-logging windthrow, but a significant fraction of warming was unexplained by canopy shade, and is thought to have been associated with catchment-scale changes in shallow groundwater temperature or flow rates.

Research especially in long-term paired watershed studies in BC has shown that putative modest changes in daily mean, maximum, or minimum stream temperature associated with logging can result in biologically significant changes in cumulative thermal exposure. These in turn result in shifts in development rates and timing of fish population life history events, such as time of emergence of young-of-the-year from streambed gravels (Macdonald et al. 1998, Holtby 1988, Holtby and Newcombe 1982). Such developmental rate changes are known to alter salmon survival rates, and can result in population decline or collapse (Bryant 2009, Holtby 1988, Holtby and Newcombe 1982).

The DEIS ignores and fails to consider or disclose these known relationships between logging and alteration of temperature regime in streams that can cause substantial adverse cumulative effects on fish life history and population productivity, especially in Pacific salmon.

4. Climate Change and Resilience of Roadless Watersheds

Watersheds with a large proportion of primary forest and roadless area are likely to be among the most resilient salmonid habitats to the stresses imposed by ongoing and future climate change (Bryant 2009, USDA Forest Service 2000). One principal category of recurring and lasting impact from roads and logging is to introduce stressors that reduce resilience and increase the volatility of watershed responses to climatic stresses like flood and drought. Examples include the increased incidence of landsliding in the face of

14

winter storms or rain-on-snow events, and the potential depletion of stream base flows by a combination of increased water demand by second growth forest and increased drought stress. Another major and extensive source of impact from climate change is likely to be the marine inundation of current estuaries from rising sea level (although in a few cases new estuaries may be created or existing estuaries expand in the face of sea level increases).

The dominant vectors of expected change in climate (Bryant 2009) and the effects of road development and logging in roadless watersheds inexorably increase the vulnerability of freshwater habitats, and the fish populations dependent upon them to recurring climatic stresses like floods and drought. Their inherent resilience to climate variability and extreme weather events is one of the reasons that watersheds associated with roadless areas are considered "safe havens," refugia, or core areas for conservation of salmonid fishes and other sensitive species (Bryant 2011, Dellasala et al 2011, Frissell and Carnefix 2007, Baxter et al. 2000, USDA Forest Service 2000, Bryant and Everest 1998).

Despite the recognized imperative that climate changes places on land managers of coastal and northern regions (Bryant 2009), the DEIS critically fails to consider or analyze the likely effects of road development and logging on the response of currently roadless watersheds to future climate change.

Curriculum Vitae 19 June 2018

CHRISTOPHER A. FRISSELL

Research Ecologist & Freshwater Conservation Biologist

39625 Highland Drive

Polson, Montana 59860

Phone: 406.883.3891/Mobile 406.471.3167

e-mail: leakinmywaders@yahoo.com

WWWWeb:[https://www.researchgate.net/profile/Christopher Frissell/](https://www.researchgate.net/profile/Christopher_Frissell/)

Birth: 1 December 1960, Chehalis, Washington

Education: Ph.D. in Fisheries Science, Oregon State University, 1992

M.S. in Fisheries Science, Oregon State University, 1986

B.A. with High Honors in Zoology, University of Montana, 1982

Professional Appointments:

Principal Scientist and founder, Frissell & Raven Hydrobiological and Landscape

Sciences, LLC, Polson, MT, 2012-present (affiliated with Kier & Associates, M. Scurlock & Associates, and Pacific Watershed Associates).

Affiliate Research Professor and summer field course instructor, Flathead Lake Biological Station, The University of Montana, 2016-present

Director of Science and Conservation and Senior Staff Scientist, The Pacific Rivers Council, 2000-2012

Research Associate Professor, The University of Montana, Flathead Lake Biological Station, 1998-2000

Research Assistant Professor, The University of Montana, Flathead Lake Biological Station, 1993-1998

Research Assistant Professor, Department of Fisheries and Wildlife, Oregon State University, 1994-1997

Postdoctoral Research Associate (Faculty), Department of Fisheries and Wildlife, Oregon State University, 1992-1994

Research Assistant (Faculty), Oak Creek Laboratory of Biology, Department of Fisheries and Wildlife, Oregon State University, 1985-1992

Fields of Interest:

- * Land-aquatic ecosystem linkages and cumulative impacts of natural processes and human activities on stream habitat and stream biota.
- * Ecology, biogeography, and conservation biology of fishes and freshwater biota in relation to landscape and hydrologic change.
- * Aquatic ecosystem conservation and restoration strategies.
- * Geomorphic, hydrophysical, and landscape ecology considerations in design of integrated conservation reserves.
- * Restoration and recovery planning and design for freshwater ecosystems and species.

22

Theses and Dissertations:

Frissell, C.A. 1992. Cumulative effects of land use on salmon habitat in southwest Oregon coastal streams. Doctoral dissertation, Oregon State University, Corvallis.

Frissell, C. A. 1986. A hierarchical stream habitat classification system: development and demonstration. M.S. thesis, Oregon State University, Corvallis.

Frissell, C. A. 1982. Colonization and development of community structure in

coexisting Ephemerellid mayflies (Ephemeroptera, Ephemerellidae). Senior Thesis, Watkins Scholarship Program, The University of Montana, Missoula.

Professional Societies:

Society for Conservation Biology, 1991-present

American Fisheries Society, 1985-present

Ecological Society of America, intermittent

North American Benthological Society, intermittent

Graduate Students Mentored

Cavallo, B.J. M.S. in Organismal Biology and Ecology, The University of Montana, 1997. Thesis title: Floodplain habitat heterogeneity and the distribution, abundance, and behavior of fishes and amphibians in the Middle Fork Flathead River Basin, Montana.

Adams, S. B. Ph.D. in Organismal Biology and Ecology, The University of Montana, 1999. Dissertation title: Mechanisms Limiting a Vertebrate Invasion: Brook Trout in Mountain Streams of the Northwestern USA.

Hitt, N.P. M.S. in Organismal Biology and Ecology, The University of Montana, 2002. Distribution and potential invasion of introduced rainbow trout in the upper Flathead River drainage.

Carnefix, G. M.S. in Organismal Biology and Ecology, The University of Montana,

2002. Thesis title: Movements and ecology of bull trout in Rock Creek, MT.

Hastings, K. Ph.D. in Organismal Biology and Ecology, The University of Montana, 2005. Dissertation title: Long-term persistence of isolated fish populations in the Alexander Archipelago.

Reviewer for Journals and Agency Publications:

Canadian Journal of Fisheries and Aquatic Sciences, Conservation Biology, Ecological Applications, Environmental Management, Fisheries (AFS), Freshwater Biology, North American Journal of Fisheries Management, Oikos, Transactions of the American Fisheries Society, Fundamental and Applied Limnology, USDA Forest Service General Technical Reports

23

Member of Board of Editors for Journals:
Conservation Biology, 1996-2000

Appointments to Review Panels and Scientific Advisory Committees:

USEPA Bristol Bay Watershed Assessment Team, Subcontractor on road and pipeline impacts, through University of Alaska Anchorage and NatureServe, 2011-2012.

Independent Expert Review Panel for King County Water and Land Resources Division's Project Scoping and Implementation Practices. 2011-12. Subcontractor to MWH (Montgomery Watson Harza) for King County Dept. of Natural Resources and Parks, Seattle, WA. <http://www.kingcounty.gov/environment/dnrc/publications/wlrd-expert-review-report.aspx>

Umpqua Watersheds Science Advisory Council, Sponsored by Umpqua Watersheds, Inc., 16-17 November 2010, Roseburg, OR.

Wychus Creek Restoration Monitoring Plan Review Panel, sponsored by Upper

Deschutes Watershed Council and Bonneville Environmental Foundation. 2 October 2009, Bend, OR.

Landscape Pattern Task Group, State of the Nation's Ecosystems report. 2003-2007. H. John Heinz III Center For Science, Economics and the Environment. Washington, DC.
<http://www.heinzctr.org/Programs/Reporting/Working%20Groups/Fragmentation/index.shtml>

Science Review Team, King County Normative Flow Studies Project. 2002-2005,

Seattle, WA. <http://dnr.metrokc.gov/wlr/BASINS/flows/science-review-team.htm> Science Advisory Panel, Westside. Governor's Salmon Restoration Funding Board,

Washington State, February 2000.

Ecological Work Group, Multi-species Framework Process and Subbasin Assessment Process, Northwest Power Planning Council 1998-2000.

Peer review panelist for U.S. Environmental Protection Agency/National Science Foundation Water and Watersheds Grants Program for 1997. 7-9 May 1997. Scientific Group for the Governor's Bull Trout Restoration Team, State of Montana, 1994-2000

Oregon Department of Environmental Quality, 1992-95: Temperature Standards Review Subcommittee of the Technical Advisory Committee, Triennial Water Quality Standards Review

Scientific Assessment Panel for amphibian species, Eastside Oregon-Washington and Upper Columbia Basin EIS, US BLM and US Forest Service, 1994

Oregon Department of Forestry, 1990-93: Technical Advisory Group for the Forest Practices Monitoring Program; Wetlands Technical Group; Stream Protection Advisory Panel.

Technical Workshops Organized (selected):

Lead organizer and facilitator, New Science Implications for the Aquatic Conservation Strategy of the Northwest Forest Plan. Sponsored by the Coast Range Association, 2-3 December 2013, Portland, OR.

Co-organizer, with M. Scurlock and R. Kattelman: SNEP Plus 15 Years: Ecological & Conservation Science for Freshwater Resource Protection & Federal Land Management in the Sierra Nevada. Sponsored by Pacific

Rivers Council, Sierra Forest Legacy, UC Berkeley School Environmental Design, UC Davis Center for Watershed Science, and California Trout; 12-13 December 2011, Davis, CA.

Organizer and facilitator, Workshop on Science for River and Watershed Conservation. Sponsored by Campaign for Montana's Headwaters, 7 October 2010, Flathead Lake Biological Station, Polson, MT.

Co-convenor, with M. Scurlock and Kristen Boyles: Technical Workshop on Science for Forest Planning. Sponsored by Pacific Rivers Council and Earthjustice, 29 June 2010, Seattle, WA.

Organizer and panelist, Umpqua Independent Science Council. Sponsored by Pacific Rivers Council, 2010-2011.

Co-organizer and panelist, with Deanne Spooner and David Bayes: Workshop on Economics of ESA Critical Habitat Policy, sponsored by Pacific Rivers Council and San Francisco State University, October 4-5, 2007, San Francisco, CA.

Organizer and coordinator of Science Panel on Roads and Watersheds, sponsored by Pacific Rivers Council, 10-11 November 2006, Forest Grove, OR.

Organizer and coordinator of the Recovery Science Panel for the Western Native Trout Campaign. Sponsored by Pacific Rivers Council, meeting 2-3 March 2002, Portland, OR.

39

Technical Workshops Organized (selected), continued:

Organizer and coordinator of Biodiversity Workshop, Consortium for the Study of North Temperate Montane Ecosystems. A cooperative research venture of The University of Montana and Montana State University, supported by the NSF EPSCoR program. 4 February, 1997 Missoula, MT.

Scientific Workshop on Large Basin Restoration: Grande Ronde River (co-organizer).

21-22 March 1993, La Grande, OR. Sponsored by The Pacific Rivers Council. Scientific Workshop on Large Basin Restoration: South Umpqua River. 16-18

September 1992, Roseburg, Oregon. Sponsored by The Pacific Rivers Council. Scientific Workshop on Large Basin Restoration: Lower Rogue River. 21-23 October

1992, Gold Beach, OR. Sponsored by The Pacific Rivers Council.

Other Panels and Workshops Attended by Invitation since 1994 (selected):

Invited Review Panelist, Workshop on Linking Habitat Characteristics to Salmon Data. 29-30 September 1999, National Marine Fisheries Service, Northwest Fisheries Science Center, Seattle, WA.

Invited participant, Yellowstone to Yukon Aquatic Conservation Science Workshop. 20-22 August 1999, Flathead Lake Biological Station, The University of Montana, Polson, MT.

Invited Panelist, Workshop on Options for Restoring Salmon Habitat in the Mainstem Snake and Columbia Rivers. Pacific Northwest National Laboratory-Battelle, 19 August 1999, Kennewick, WA

Panelist at State of Oregon/National Marine Fisheries Service Memorandum of Agreement Committee Workshop: Cumulative Effects of State and Private Forest Practices on Salmon Habitat. 21 April 1998, Salem, OR.

Invited participant in a scientific workshop, Multiple Stressors in Ecological Risk

Management. Sponsored by the Society for Environmental Chemistry and Toxicology and the USEPA, 13-18 September 1997, Pellston, MI.

Society for Conservation Biology Workshop: Communicating with the Media (panel member). 9 June 1997, Victoria, British Columbia, Canada.

Invited speaker for a workshop, Continuing Education in Ecosystem Management. Sponsored by the University of Idaho. Catchment scale processes and linkages between landscape and stream conditions. 31 January 1997, Moscow, ID.

The Nature Conservancy, Aquatic Classification Workshop (invited presenter). 9-11 April 1996, Cedar Creek Farm, MO.

Kenai River Community Forum (keynote speaker and panelist). The Nature Conservancy of Alaska, USEPA and USFWS, 19-21 April, Soldotna, AK.

Conservation Biology and Management of Interior Salmonids (invited presenter and session co-moderator). USDA Forest Service Intermountain Research Station and Utah State University, 4-5 October 1995, Logan, UT.

Eastside Ecosystem Planning Workshop. Sierra Club Legal Defense Fund, 16 December 1994, Portland, OR.

40

Other Panels and Workshops Attended by Invitation since 1994, continued:

Co-instructor at workshop series on Watershed Restoration and the "Rapid Biotic Response Strategy" for Riverine Ecosystem Restoration, sponsored by The Pacific Rivers Council, 1993-95, California, Oregon, and Washington.

Fire/Salvage and Aquatic Ecosystems Policy Workshop. The Pacific Rivers Council, 15 December 1994, Portland, OR.

Panel on Forest Health Issues, Native Forest Network annual conference, 13 November 1994, Missoula, MT.

Workshop on Watershed/Fisheries Cumulative Effects Analysis, sponsored by Headwaters, The Pacific Rivers Council, USDA Forest Service, and Bureau of Land Management. 29 September-2 October, 1994, Ruch, OR.

Boise Funders' Scoping Meeting, sponsored by Bullit, Harder, and Lazar Foundations, 30-31 August 1994, Boise, Idaho.

Scientists Briefing for U.S. Senate staff on post-fire logging and forest management and freshwater resources. Washington, D.C., 18-19 September 2006.

Other Presentations and Outreach (Selected):

Invited testimony on federal land management and the future of salmon and aquatic biodiversity in the Pacific Northwest, to the U.S. House of Representatives, Subcommittee on National Parks and Public Lands, Washington, D.C., 11 March 1993.

Briefing for Congressional representatives and staff on federal lands management and conservation and recovery of salmonid fishes and riverine ecosystems, Washington, D.C., 22 January 1993.

Invited testimony to the 1991 Oregon State Legislature, on panel representing the Oregon Chapter of the American Fisheries Society, on the status of native fishes, impacts of forest practices on fish habitat, and the need or changes in environmental regulation.

Invited testimony to the Oregon Board of Forestry Forest Issues Forum, December 1990, on cumulative impacts of forest practices on native aquatic species and the need for changes in forest management.

Worked with Oregon Public Broadcasting to describe our research project and its

significance in a 15-minute segment of the television program, Oregon Field Guide, first aired in June 1990.

Presented seminars, informal presentations, lectures, and discussions at research review meetings, as guest speaker in classrooms and public interest

Christopher A. Frissell

Comments on Fisheries and Water Quality Issues in the US Forest Service Draft Environmental Impact Statement for the Alaska Roadless Rule, December 2019.

FINAL 16 December 2019

1. Introduction

1.1 Scope and Importance of Review

I was commissioned in November and December 2019 by The Wilderness Society to review the US Forest Service's Draft Environmental Impact Statement for the Alaska Roadless Rule (https://www.fs.usda.gov/nfs/11558/www/nepa/109834_FSPLT3_4876629.pdf) (herein after, "DEIS"). The Society asked me to prepare comments on water quality and fisheries effects on the Tongass National Forest, as they are addressed, or not addressed in the DEIS, based on best available scientific information and my professional opinion as an aquatic scientist with expertise in freshwater ecology, fish conservation, watershed processes, environmental impact assessment and land and water resource planning. The observations and opinions in this document are expressly my own.

The resource at risk from logging and road construction on roadless lands of the Tongass National Forest is considerable at a regional and national scale (Byrant 2011, Halupka et al. 2003, Bryant and Everest 1998, Everest et al. 1997). Freshwater habitat on the Tongass National Forest produced roughly 25% of Alaska's commercial salmon catch in the past decade, with an average annual dockside landed value of US\$88 million (Johnson et al. 2019). Despite recognized harms to salmon habitat in some watersheds from past timber harvesting and road construction, the Tongass National Forest produces more wild salmon by far than any other national forest in the nation. This globally

impressive productivity is in large part attributed to the extensive area of unlogged, roadless watersheds on the national forest, where ecological integrity water quality, biophysical diversity, and the productive capacity of freshwater habitat for salmon remain high (Halupka et al. 2003, Bryant and Everest 1998, Everest et al. 1997).

The proposed Alaska Roadless Rule would exempt the Tongass National Forest from the 2001 Roadless Area Conservation Rule and thereby remove that rule's prohibitions against road construction and timber cutting on all of the 9.2 million acres of inventoried roadless areas in the Tongass. The DEIS evaluates several other alternatives that provide varying levels of protection for Tongass roadless areas, but none are as protective as the No Action alternative.

The Forest Service's evaluation of impacts to fish habitat and salmon harvest are summarized as follows: "Overall effects to fish habitat are expected to be negligible under all alternatives, because of the strong protections to fish habitats provided by Forest Plan LUDs, Forest-wide standards and guidelines including the riparian management strategy, and the lack of old-growth harvest or associated road construction allowed in the T77 watersheds and TNC /Audubon Conservation Priority Areas" (DEIS ES-15). The DEIS further states that "localized effects on fish habitat may occur, but these are expected to be minimal overall" (DEIS ES-15). Consequently, according to the DEIS, "None of the alternatives are expected to have a significant change to the commercial fishing or fish-processing industries" (DEIS ES-13).

For reasons discussed below, these erroneous assumptions and conclusions in the DEIS are based on a grossly inadequate consideration of the best available science regarding the effects of road construction and logging on aquatic ecosystems.

1.2 Qualifications

I am a consulting aquatic ecologist and watershed scientist with expertise in land management and conservation and restoration strategies for fishes and amphibians, with extensive experience with Pacific salmon, native trout and charr. I also serve as Affiliate Research Professor at Flathead Lake Biological Station, the University of Montana. My expertise is outlined in my CV, which is appended to this declaration.

My education is as follows. I hold a Bachelors degree in Zoology from the University of Montana, and Masters and PhD degrees in Fisheries Science from Oregon State University, where the focus of my graduate research was the cumulative effect of land use and watershed disturbance on freshwater ecosystems and fish populations.

I have 30 years of experience as a research scientist in the field of aquatic ecology, fishery and conservation biology, and watershed science, having held research faculty positions at The University of Montana and Oregon State University. I have more than 40 scientific and technical publications in aquatic ecology, fishery and conservation biology, and watershed science, in professional journals, symposia, books, and book chapters, and

also am author of more than 30 research reports for various institutions and agencies. I have served as peer reviewer or reviewing editor for more than a dozen professional journals and government research publications. I have served on 13 professional and government panels that provided technical guidance about stream and river protection to state and federal wildlife and forest management agencies in three states, including technical panels that advised Oregon state agencies on water temperature standard development, and forestry landslide prevention rulemaking. I later served on Montana governor's scientific panel to inform that state's restoration strategy for threatened bull trout, and participated in Forest Service expert panels assessing the efficacy of regional plans for conservation of freshwater species, including amphibians. I have commented or served as an expert witness in litigation of numerous national forest plans and federal forest project and programmatic NEPA efforts since about 1980. In Alaska, I sponsored a PhD student who studied ecology and conservation headwater trout populations in southeast Alaska (Hastings 2005); contracted with USEPA to evaluate impacts of roads and pipelines in possible mine development in Bristol Bay; and reviewed environmental impact statements for mine and mine road development in Bristol Bay and the Ambler Mining District of the Brooks Range.

While on the faculty as a researcher at Oregon State University, I was funded to lead a 6-year research project on salmon habitat protection in Oregon coastal rivers. In 1992 I completed my doctoral dissertation on the cumulative effects of land use on salmon habitat in Oregon South Coast rivers. That research focused on the full spectrum of threats to physical habitat of salmon in coastal watersheds, including water temperature, sediment conditions, landslides and road erosion, large wood, and channel dynamics. As the dominant land use in the region, forestry was a primary topic of that research.

For ten years I was a full-time Research Assistant Professor and Research Associate Professor at the University of Montana's Flathead Lake Biological Station, where I continued to conduct research on salmon ecology and freshwater habitat conservation. For 11 years I held the positions (alternately) of Senior Staff Scientist or Conservation and Science Director with the Pacific Rivers Council, where I worked specifically on the interface of scientific information and land management, with considerable involvement in forest management policy development for stream protection and salmon and trout recovery, including in coastal Oregon. My work in particular has focused on the scientific adequacy of federal forest land planning and aquatic conservation policies, and I have special expertise in the manifold impacts on freshwater habitat and salmonid fishes of roads and road development in roadless forested watersheds.

1.3 Overview of Documents Reviewed

In preparing these comments I reviewed relevant portions of the DEIS and other Forest Service planning documents and other reports and articles from the scientific literature, as cited in the text below. In particular in the DEIS, I reviewed material in section 1 on aquatic habitat, soils, and water quality impacts; in section 2 on expected change in

salmon harvest and fish habitat; and in section 3 on soils and water, salmon harvest, fisheries, and transportation and roads.

2. Priority Watersheds and the Long-Term Conservation of Salmon Ecosystems

Although salmon in southeast Alaska represent five relatively widely distributed species, homing to natal habitats in combination with a diversity of habitat configurations and conditions has provided a ripe evolutionary field for the emergence of many distinct, locally adapted ecotypes within these species in southeast Alaska (Halupka et al. 2003). This diversity of habitats and locally adapted ecotypes is the very basis of salmon species productivity (Brennan et al. 2019, Schindler et al. 2010). This diversity of habitats and populations serves in turn as the basis of the large trophic and ecological roles that salmon play in ecosystems (Armstrong et al. 2019). This means the conservation of salmon and the manifold roles of salmon in the natural ecosystem and the human economy of southeast Alaska are directly dependent on protection and, where past degradation has occurred, restoration of the full natural diversity of aquatic habitats across the region.

Loss of diversity through increased footprint of human disturbance of watersheds will inexorably reduce the productive capacity of southeast Alaska, and especially the pristine, now roadless watersheds of the Tongass National Forest, for salmon. This fact is well-recognized in the scientific literature (see many aspects of the problem reviewed and cited in the text below), but it is obscured, if not overtly denied, in this DEIS. It seems the DEIS is premised on a covert, unstated, and utterly undocumented assumption that road-building and logging can occur in currently roadless watersheds with no risk of significant harm to aquatic habitat and fisheries. History and the available scientific literature establish clearly that this assumption is wholly untenable. The assumption is also at complete odds with Forest Service planning and policy documents of the past three decades, yet this departure is not explained or reasonably defended in the DEIS.

2.1 Protection of Priority Watersheds is in Question

In recent years the conservation of salmon in the Tongass National Forest has been strategically pinned to the concept of strict protection of a subset of watersheds in the region that are known to have high ecological and fishery values. One iteration is the Tongass National Forest Priority Watershed Classification (https://www.fs.usda.gov/Internet/FSE_DOCUMENTS/fseprd622074.pdf), and another is the so-called “T77” watershed network proposed by a coalition of public interest and fishing industry groups (<http://www.americansalmonforest.org/the-details.html>, http://ak.audubon.org/sites/default/files/t77_subsection_seak_atlas_ch07_human_uses_200dpi.pdf). The DEIS falls short in failing to adequately account for the potential effect of removal of roadless area conservation protections and reclassification of timber suitability on road building and logging in these watersheds, which are heavily keyed to existing roadless areas where habitat, water quality, and watershed conditions remain

optimal. Habitat losses and fish populations impacts in these watersheds could disproportionately affect near term salmon production. Other than stating that old-growth harvest will continue to be disallowed in T77 watersheds under the 2016 Tongass Plan, the DEIS is wholly unclear as to the level and kind of protections these priority watersheds would receive under the alternatives. It appears the DEIS is designed to allow new road construction within the boundaries of conservation priority watersheds in order to access timber in adjacent areas, which could be highly detrimental to salmon habitat in these watersheds (see review of the impacts of roads below).

That said, in my opinion the shifting spatial distribution of salmon productivity demonstrated in recent “salmon portfolio” research (e.g., Brennan et al. 2019) calls into question whether a conservation strategy based primarily on protection of these selected watersheds is tenable in the long term. Watersheds that are productive for a given salmon species at the present time may not be those most productive for that species in past decades or centuries, and may not be those that will be most productive in future decades. A triage-based strategy that prioritizes a subset of extant habitat for conservation is warranted when one is considering a tattered landscape with few remaining productive habitats and populations, and the managing agency is in restoration mode. But when the subject is a relatively intact region, and the planning is to program actions that bring intrinsic risk of highly persistent adverse impacts to that habitat (e.g., roadbuilding and logging of primary and old growth forest), protection or restoration will not be the outcome. In fact, the outcome will explicitly be a net loss of habitat and population productivity--with possibly less loss of habitat and populations than if no protection priorities at all had been in place. And the shifting productivity/portfolio research on salmon ecosystems all points to our fundamental inability to anticipate where future production will come from, at least across relatively ecologically intact landscapes such as southeast Alaska.

The portfolio research tells us ultimately that a fixed reserve subset is not a viable means of protecting an existing productive salmon ecosystem, and that characterization certainly applies to the Tongass National Forest. Effective conservation of salmon on those forests will require comprehensive protections that assure no net loss of watershed condition relative to current conditions. That is plainly not the policy put forth in this DEIS, though the DEIS does not make that clear. Rather, the proposed action would risk degrading many watersheds that are currently in pristine roadless condition, while offering no reasoned assurance or defensible evidence that such widespread degradation would be compensated by habitat improvement or restoration elsewhere. Despite efforts in the DEIS to minimize effects through omission and tacit denial, the proposed action is in fact a massive, regional-scale step backward from the level of conservation that salmon enjoy under present forest plans, including the regulatory protection provided by the Roadless Rule.

3. Insufficiency of Riparian Management Areas to Protect Streams from Logging and Roads

While somewhat tacit and not stated in a plain way that could be subject to scrutiny and review, it is clear to an informed observer that the DEIS rests on an unfounded grand underlying assumption that logging and roadbuilding can be pursued in roadless areas with no significant or systematic impact on watershed processes, water quality, fish habitat and fish populations. One rationale for this vague and broad assumption is presumably that riparian protections offered in the Tongass forest plan are themselves sufficient or more than sufficient to fully mitigate any harms that might arise from road building, road use and maintenance, and logging. This is the context within which I evaluate the relevant literature in the following section. Virtually all of the following information is not considered in the DEIS; therefore, these potential and known impacts of logging and roadbuilding are not disclosed to the public therein—despite that they are widely documented in the Forest Service’s own research (as cited below, and further within the reference sections of many of the papers and reports cited) and in the agency’s own past planning documents.

Leaving unlogged riparian forests is insufficient to mitigate for the effects of upland logging on streams, contrary to the implications in the DEIS. In the sections below I discuss edge effects on windthrow or blowdown, mass erosion and channel erosion resulting from hydrologic changes caused by logging, the effects of roads altering hydrology and erosion processes, and alteration of groundwater temperature by logging. Each of these categories of impact poses consequences for fish habitat and water quality that need to be analyzed on a regional scale to account for potential cumulative impacts of multiple logging projects that we know, from past experience and common sense, can result from a systematic forest plan policy change, such as proposed removal of roadless areas from protection forest-wide. The DEIS arbitrarily and capriciously dismisses, and fails to substantively and accurately address, the environmental effects I discuss below.

3.1 Soils and Water Quality: Unreasoned Assumptions Wholly Inconsistent with Past NEPA Assessments, Plans and Policies.

The DEIS identifies aquatic habitat and the fisheries supported by that habitat as a “key issue” (DEIS 1-7). However, the document proceeds immediately to eliminate soils and water quality from detailed analysis (DEIS 1-8), with only sparse and grossly inadequate explanation. DEIS takes this inexplicable step despite that the mechanisms by which road construction, road use and management, and logging adversely affect soil erosion and water quality are well understood, and are the very mechanisms that in turn impact aquatic habitat and fish populations. This is the first of many inexplicable and wholly unreasoned skips of logic that allow the Forest Service to skirt the issues of risk of impact to salmon habitat and populations of the proposed action and alternatives in the DEIS. I offer a more detailed review of science pertaining to how salmon habitat is affected by alterations of vegetation, soil and water quality that occur when roadless areas are logged.

Specifically, the DEIS (1-8) states that a “preliminary review” of potential soil impacts found that Alternative 6 would increase the amount of land with “high hazard” soils that would be open for commercial logging by 38 percent. This is consistent with a nationwide pattern of relatively high concentrations of “high hazard” or high-erosion risk soils in national forest roadless areas. Indeed, vulnerability of soils to erosion and landsliding is among the major reasons the Forest Service has deferred road construction and logging and in these areas in the past. It is among the principal reasons they remain roadless today. Nevertheless, the DEIS fails to address the environmental consequences of the increased area of “high hazard” terrain in lands allocated for logging on the Tongass. Inexplicably, the Forest Service simply claims that “From a broad standpoint, the impacts to soil characteristics and composition from the proposed alternatives would be the same as disclosed in the 2016 Forest Plan Amendment FEIS due to similar harvest levels and Forest Plan standards and guidelines” (DEIS 1-8), then capriciously denies that further analysis is needed. This claim in the DEIS stands in direct contradiction to the increase in “high hazard” soils in the commercial timber base. In my opinion it is near certain any increase in “high hazard” soils within areas open for commercial logging substantially increases the likelihood of damage to water quality and fisheries from post-logging soil erosion and sedimentation, as further described in my comments below.

The fact that the PTSQ remains unchanged, the reason given by the Forest Service as to why environmental effects related to soil erosion will ostensibly not increase under any alternative (DEIS 1-8) does not mitigate against potential increases in mass failure and soil erosion, for several reasons. One reason is that PTSQ is a “soft target” that does not in fact cap the total area logged in any given time period. For example, the same volume of timber can be drawn from a smaller area of concentrated larger trees, or a larger area of lower-volume and lower value trees. Another is that neither the PTSQ nor any other forest-level timber volume target regulates the specific areas logged within the overall area allocated to timber production. By knowingly including more high-hazard soils in the commercial timber base, the Forest Service inexorably increases the likelihood of triggering and increasing the incidence of erosion and landslides through errors of identification of erosion-prone sites and inadequate implementation of necessary mitigation measures (those being primarily *avoidance* of logging in high-hazard locales, see comments below).

For the reasons above, and because soil erosion hazard (including surface erosion, mass failure, and debris flows propagated by landslides) are central causal factors in the harms done by forestry operations to water quality and fishery resources, in my opinion it is arbitrary and utterly indefensible for this DEIS to fail to analyze, consider, and disclose the effects of commercial timber land reallocation and loss of roadless area protection on Tongass National Forest soil, water, and fishery resources.

3.2 Windthrow in Riparian Forests

Logging adjacent to riparian management areas alters the disturbance regime of riparian forests and streams in ways that can adversely affect fish habitat and populations (Moore

and Richardson 2012). Logging adjacent to riparian forests often results in increased windthrow of tree within riparian areas (Tongass National Forest Annual Monitoring Report 2007, Tongass National Forest Annual Monitoring Report 2013, Moore and Richardson 2012, Bahuguna et al. 2010, 2012, Rollerson and McGourlick 2001, Everest et al. 1997). Windthrow increased over natural background rates can result in exposure of channels to solar insolation and increased summer temperatures (Macdonald et a. 2003), reduction of future large tree recruitment, and increased channel bed and bank erosion, including landsliding and debris flows (Bahuguna et al. 2010, 2012, Lewis 1998, Mcdonald et al. 2003).

3.3 Landslides Originating from Upslope Cutting Units

Mass failures, including both shallow rapid landslides and deeper, often slower-moving slump-earthflow failures, are common across the Tongass National Forest, and it is well-established that the incidence of landslides is magnified by logging (Johnson et al. 2000, Everest et al. 1997, Swanston and Marion 1991, Wu and Swanston 1980, Wu et al. 1979). Logging not only directly disturbs soils, but associated vegetation removal renders soils vulnerable to mass movement and mass failure by reducing canopy interception and dispersion of rain and snow, by greatly reducing evapotranspiration and causing increased soil moisture conditions, and by destroying root strength that contributes to soil cohesion on forested slopes. The DEIS fails to consider and disclose how logging in currently protected roadless areas will impact mass-erosion-prone slopes, hence altering the frequency, magnitude, and distribution of landslides relative to salmonid habitats across the Tongass National Forest.

It is important to recognize that vegetation removal by logging—whether by clearcutting or thinning—not only causes many landslides on recognized high-erosion risk terrain (which generally includes the steepest part of the landscape) but also increases the incidence of landslides on parts of the landscape that are usually considered to be of moderate or even relatively low risk of landslide erosion (most often because they are not as steeply sloping). This is a critical point, because the only effective means of preventing large increases in landslide occurrence is by identifying locations prone to failure and prohibiting vegetation removal on those sites, and in up-slope areas that contribute drainage to those sites. Some landslide-prone sites occur on areas of the forest with moderate slopes and that are typically not mapped as highly landslide-prone. In many cases no clear surface evidence exists in the field that allows such sites to be identified prior to logging. Because complete avoidance of sensitive sites is impossible, logging will inevitably and cumulatively increase the incidence of landslides in salmon watersheds. The only question is how large the magnitude of increase in landslide erosion will be relative to unlogged watersheds. Previously unlogged roadless areas are likely to show the highest rates of landslide erosion increase if they are logged, because for the most part slopes in those areas have not previously experienced deforested or low-tree-density conditions in recent decades or centuries.

3.4 Headward Channel Expansion Caused by Altered Hydrology

Expansion of headwater channels has been an often-observed cause of post-logging erosion, but has been seldom quantified in Pacific coast watersheds (Frissell 2012). The one study I know of that focused comprehensively on this phenomenon, Reid et al. (2010), makes clear this is a seriously unexamined and too-often overlooked source of sediment delivery to Pacific Coast streams. Reid et al. (2010) reported that second-growth logging of a redwood-dominated forest in Caspar Creek, north coastal California, was followed by a substantial headwater expansion of stream channel density and coalescence of pre-existing discontinuous channels in headwater swales. Despite “robust” riparian buffer strips left in the second round Caspar Creek logging during this study, suspended sediment yields in instrumented tributaries increased significantly after logging. Channel expansion was caused by headward migration of existing channel knickpoints and subsequent channel incision and enlargement, as well as sapping and collapse of subsurface flow macropores and pipes. Acceleration of surface and subsurface channel-forming processes was apparently associated with increased antecedent moisture conditions, soil saturation, and runoff caused by the abrupt reduction of forest canopy interception and evapotranspiration following logging. In addition, back erosion of extant channels increased in linear extent, possibly reflecting increased channel-forming flows possibly coupled with impingement of hillslopes that could have been creeping at faster rates in the years immediately following logging (e.g., see Swanston et al. 1988). Reid et al. (2010) found that channel expansion led to stream density increasing by about 28 percent after logging.

Given that logging of any dense forest cover greatly reduced evapotranspiration of soil water, it is extremely likely the same processes drive erosion, channel expansion and sedimentation of streams after logging of forests of southeast Alaska. Expanded channel networks are associated with persistent increases in peak flow magnitude, which may result from more rapid translation of slower subsurface to rapid surface flow during storms. Erosion, both primary and secondarily associated with expanding or expanded channel networks, may be responsible for sustained elevation of suspended sediment yield and turbidity in Caspar Creek (reported in Reid et al. 2010, Keppeler 2012, Klein et al. 2012, and discussed as a regional concern in the review by Gomi et al. 2005). Expanded channel networks increase surface water connectivity to and sediment delivery from pre-existing erosion sources like landslide scarps and roads, and can itself initiate additional mass erosion through bank collapse and triggering of channel-adjacent landslides.

Reid et al. (2010) observed that boles and living tree roots in riparian forest buffers can partially hinder, but not entirely prevent, channel expansion. Fully controlling channel expansion effects on streamflow, erosion, and sedimentation would require limiting the overall rate of logging within small catchments over time, moderating silvicultural treatments to promote more rapid hydrologic recovery (e.g., via partial cutting rather than clearcutting), and careful consideration of past and future natural events, including wildfire, windthrow, and disease which, independent of or interactively with logging, also alter the hydrologic effects of vegetation.

Roadless areas preserve natural vegetation dynamics and disturbance regimes that maintain catchment hydrology and stream networks within a natural range of variability. Logging as an exotic disturbance in roadless areas is highly likely to alter hydrology such that accelerated stream erosion and stream network expansion result, over a larger area and larger number of watersheds than would occur if roadless areas are protected from logging.

Post-logging fluvial erosion, gullying and channel expansion is a scientifically recognized cumulative impact of logging that affects sediment supply and could potentially degrade salmonid habitat quality in connected waters downstream of headwaters if roadless areas of the Tongass National Forest are logged. This environmental impact has not been addressed or disclosed in the present DEIS.

3.5 Effects of Roads on Hydrology, Erosion and Sedimentation

Roads are well known to alter hydrology and erosion regimes in watersheds of the Tongass National Forest (Everest et al. 1997), just as they do elsewhere (Wemple et al. 2001, Luce and Black 2001, Jones et al. 2000, Trombulak and Frissell 2000). Landslides and gully erosion initiating at or associated with the hydrological alterations caused by roads and landings not only can penetrate and deliver sediment through even very wide riparian forest buffers, they often initiate debris flows that can travel and directly impact aquatic and riparian habitat a great distance downstream from the point of origin. In either case, riparian forest buffers only confer limited protection against the harmful effects of road-caused mass failures, and in larger events, mass failures can virtually obliterate riparian forests, exposing streams to extremes of summer solar insolation and winter freezing, as well as redistributing large wood, scouring existing habitat structure away or burying it under large sediment deposits, and simplifying habitat structure in runout zones.

It is important to recognize that roads not only cause many landslides on recognized high-erosion risk terrain (which generally includes the steepest part of the landscape) but roads and landings often trigger landslides on parts of the landscape that are considered to be of moderate or even relatively low risk of landsliding under natural conditions. This results from the inexorable distortion of flow paths of both surface water and subsurface water caused by distortions of natural slopes and soils by road construction, use, and maintenance. The result is that road system expansion will inevitably expand both the number and area of occurrence of mass failures and associated debris flows and sediment deposits that adversely affect downstream fish habitat on a large scale. The DEIS utterly fails to consider, explain or disclose what the impact will be of road system expansion into currently roadless areas, many of which contain extensive areas of landslide-prone terrain.

Roads also cause chronic, on-going delivery of sediment at road crossings of small and large streams (Wemple et al. 2001, Jones et al. 2000), and sediment delivered even in the

smallest headwater streams can be rapidly transported downstream to harm salmonid spawning and rearing areas (Trombulak and Frissell 2000, Everest et al. 1997, Furniss and others 1991). Seldom can sediment discharges at road crossings be completely eliminated; to do so requires extreme care in crossing design and intensive, frequent within-season road maintenance. In fact, some road maintenance activities that are necessary to reduce the risk of catastrophic failure of forest roads, as well as actions to decommission or remove existing forest roads, themselves generate sediment runoff that can impact streams (Switalski et al. 2004, Luce and Black 2001b). Variability in the cause-effect relations between forest roads and stream sedimentation complicates both remedial practices and preventative practices in road construction and management, resulting in continuing high level of uncertainty about the effectiveness of so called “best management practices” (Al-Chokhachy et al. 2016). In contrast to this recognized uncertainty, the DEIS purports, while offering virtually no evidence, that the impacts of new roads on water quality and fisheries in and downstream of roadless areas will be somehow nonexistent.

The widespread, systemic failure or inadequacy of existing road maintenance resources to mitigate harm from sediment pollution (see Gucinski et al. 2001), especially at road crossings and other near-stream road segments, is one of the major reasons the US Forest Service implemented the Roads Policy and Roadless Rule nationally (USDA Forest Service 2000). All national forests, including the Tongass, remain unable to adequately maintain the existing road system to reduce its ongoing and future harmful impact on aquatic resources and fisheries. It is clear on the face of it that proposed elimination of Roadless Rule protection on the Tongass, and potentially the Chugach National Forest, is intentionally designed to allow expansion of the existing road network. The DEIS offers no rationale for how harms to the overall road system will be reduced in the face of road system expansion that is supported by the proposed suspension of the Roadless Rule.

Roads may be correlated with watershed condition, but it is important to recognize that such a correlation does not necessarily mean that “fixing” roads will alleviate all of the correlated effects (Al-Chokhachy et al. 2016, Frissell 2012, McDonald and Coe 2007). Road density integrates at least two major and separate categories of phenomena that contribute to erosion and sediment delivery (Trombulak and Frissell 2000). The first is erosion and sediment entering surface waters that is generated by the road itself and operations on the road. This category includes secondary hydrophysical effects of roads, including landslides and gullies that initiate because roads disturbed natural drainage pattern, and maintenance-related runoff. This first category is targeted by road remediation and mitigation measures that reduce erosion or sediment delivery to streams from roadways (Al-Chokhachy et al. 2016, Switalski et al. 2004). The second category is indirect: the erosion and sedimentation that are generated by land use actions and practices that are either supported by or incidental to the road network, as discussed above. Those phenomena in the second category are direct ground disturbance from timber felling and yarding, accelerated windthrow around cutting unit margins, and channel extension, gullying, and bank erosion initiating as a consequence of extensive vegetation removal in the catchment. These erosion and sediment sources are not mitigated by road management measures.

The spatial arrangement of road networks on the landscape relative to slope stability, soil erosion proneness, and stream network locations act to codetermine the extent of impairment of downstream fish habitat by road-generated erosion and sedimentation (Al-Chokhachy et al. 2016, MacDonald and Coe 2007, Jones et al. 2000, Trombulak and Frissell 2000). Within the Pacific Coastal mountains and the Pacific Northwest more broadly, existing roadless areas are often associated with the highest-quality fish habitat, in part because of the limited spatial extent of road impacts and relatively few road crossing locations in their catchments. As a result, watersheds with a high proportion of roadless area tend to be relatively high in fish abundance, salmonid diversity and production, and roadless areas thus are of extreme value in the long-term conservation of salmon and trout populations throughout their ranges (Dellasala et al. 2011, Frissell and Carnefix 2007, Hitt and Frissell 2004, Loucks et al. 2003, Trombulak and Frissell 2000, Baxter et al. 2000). Despite that the proposed suspension of the Roadless Rule is explicitly intended to allow the expansion of the logging road network into presently roadless areas in Tongass National Forest watersheds, the DEIS utterly fails to explain how road system expansion will not be associated with more widespread impacts of salmon streams and more extensive deterioration of high-quality salmonid habitat.

Because road systems span multiple watersheds across large areas of national forest, because their adverse impacts cannot be completely avoided or remediated, and because harms to aquatic ecosystems accrue over many decades and are often triggered or exacerbated by natural events like winter storms and summer drought, as well as by climate change that affects storms and drought at regional scales, the cumulative impacts of expansion of road systems must be addressed at the scale of the national forest or a major portion of a national forest. That is, the cumulative effects of road system expansion into presently roadless areas on fish habitat and fisheries simply cannot be adequately analyzed, disclosed, or effectively remediated at the scale of individual timber or road construction projects (Selva et al. 2015, Hitt and Frissell 2004, Trombulak and Frissell 2000). For example, in many cases existing Forest Service roadless areas act in concert with National Parks, Wilderness, or other permanent land protections to secure fish habitat and other conservation values in a larger downstream stream and river network (e.g., Frissell and Carnefix 2007, Hitt and Frissell 2004, Loucks et al. 2003, Martin et al. 2000, Noss et al. 1999). This fact is a major underlying reason for the Forest Service's decisions to implement the Roadless Rule (Turner 2006, Martin et al. 2000, USDA Forest Service 2000) and Roads Policy as directives systematically augmenting national forest plans and planning procedures across the nation.

3.6 Water Temperature Alteration from Upslope Logging

Logging alters the evapotranspiration demand by directly removing vegetation. At least for the initial decade after logging, until vigorously growing second-growth trees attain significant cover, soil and groundwater tend to increase because vegetation is using less water. Moreover, the removal of canopy cover can expose soils to direct solar heating,

and areas of shallow groundwater may warm to a greater degree than they did under full forest cover.

Pollock et al. (2009) found that mean and summer mean and maximum temperature across 40 small streams on the Olympic Peninsula in Washington was substantially higher in streams draining watersheds with a higher proportion of cumulative logged area catchment-wide. The catchment area logged relationship was significantly stronger than the relationship to riparian forest removal by logging. Many streams with high canopy shade warmed substantially when more than half of their catchment area was logged. The results strongly suggest that factors other than direct canopy shade over the stream can drive water temperatures; these may include canopy opening from landslides and debris flows, or may indicate warming of shallow groundwater after extensive loss of soil canopy cover, or both. In either case, riparian buffers failed to protect streams from substantial temperature changes associated with logging.

Macdonald et al. (2003) found that headwater tributaries in BC logged with buffer strips of a wide range of widths all warmed 4-6 degrees C in summer compared to streams in unlogged watersheds. Part of this warming was associated with shade loss and post-logging windthrow, but a significant fraction of warming was unexplained by canopy shade, and is thought to have been associated with catchment-scale changes in shallow groundwater temperature or flow rates.

Research especially in long-term paired watershed studies in BC has shown that putative modest changes in daily mean, maximum, or minimum stream temperature associated with logging can result in biologically significant changes in cumulative thermal exposure. These in turn result in shifts in development rates of and timing of fish population life history events, such as time of emergence of young-of-the-year from streambed gravels (Macdonald et al. 1998, Holtby 1988, Holtby and Newcombe 1982). Such developmental rate changes are known to alter salmon survival rates, and can result in population decline or collapse (Bryant 2009, Holtby 1988, Holtby and Newcombe 1982).

The DEIS ignores and fails to consider or disclose these known relationships between logging and alteration of temperature regime in streams that can cause substantial adverse cumulative effects on fish life history and population productivity, especially in Pacific salmon.

4. Climate Change and Resilience of Roadless Watersheds

Watersheds with a large proportion of primary forest and roadless area are likely to be among the most resilient salmonid habitats to the stresses imposed by ongoing and future climate change (Bryant 2009, USDA Forest Service 2000). One principal category of recurring and lasting impact from roads and logging is to introduce stressors that reduce resilience and increase the volatility of watershed responses to climatic stresses like flood and drought. Examples include the increased incidence of landsliding in the face of

winter storms or rain-on-snow events, and the potential depletion of stream base flows by a combination of increased water demand by second growth forest and increased drought stress. Another major and extensive source of impact from climate change is likely to be the marine inundation of current estuaries from rising sea level (although in a few cases new estuaries may be created or existing estuaries expand in the face of sea level increases).

The dominant vectors of expected change in climate (Bryant 2009) and the effects of road development and logging in roadless watersheds inexorably increase the vulnerability of freshwater habitats, and the fish populations dependent upon them to recurring climatic stresses like floods and drought. Their inherent resilience to climate variability and extreme weather events is one of the reasons that watersheds associated with roadless areas are considered “safe havens,” refugia, or core areas for conservation of salmonid fishes and other sensitive species (Bryant 2011, Dellasala et al 2011, Frissell and Carnefix 2007, Baxter et al. 2000, USDA Forest Service 2000, Bryant and Everest 1998).

Despite the recognized imperative that climate changes places on land managers of coastal and northern regions (Bryant 2009), the DEIS critically fails to consider or analyze the likely effects of road development and logging on the response of currently roadless watersheds to future climate change.

CHRISTOPHER A. FRISSELL

Research Ecologist & Freshwater Conservation Biologist
39625 Highland Drive
Polson, Montana 59860

Phone: 406.883.3891/Mobile 406.471.3167

e-mail: leakinmywaders@yahoo.com

WWWeb: https://www.researchgate.net/profile/Christopher_Frissell/

Birth: 1 December 1960, Chehalis, Washington

Education: Ph.D. in Fisheries Science, Oregon State University, 1992
 M.S. in Fisheries Science, Oregon State University, 1986
 B.A. with High Honors in Zoology, University of Montana, 1982

Professional Appointments:

- Principal Scientist and founder, Frissell & Raven Hydrobiological and Landscape Sciences, LLC, Polson, MT, 2012-present (affiliated with Kier & Associates, M. Scurlock & Associates, and Pacific Watershed Associates).
- Affiliate Research Professor and summer field course instructor, Flathead Lake Biological Station, The University of Montana, 2016-present
- Director of Science and Conservation and Senior Staff Scientist, The Pacific Rivers Council, 2000-2012
- Research Associate Professor, The University of Montana, Flathead Lake Biological Station, 1998-2000
- Research Assistant Professor, The University of Montana, Flathead Lake Biological Station, 1993-1998
- Research Assistant Professor, Department of Fisheries and Wildlife, Oregon State University, 1994-1997
- Postdoctoral Research Associate (Faculty), Department of Fisheries and Wildlife, Oregon State University, 1992-1994
- Research Assistant (Faculty), Oak Creek Laboratory of Biology, Department of Fisheries and Wildlife, Oregon State University, 1985-1992

Fields of Interest:

- ♦ Land-aquatic ecosystem linkages and cumulative impacts of natural processes and human activities on stream habitat and stream biota.
- ♦ Ecology, biogeography, and conservation biology of fishes and freshwater biota in relation to landscape and hydrologic change.
- ♦ Aquatic ecosystem conservation and restoration strategies.
- ♦ Geomorphic, hydrophysical, and landscape ecology considerations in design of integrated conservation reserves.
- ♦ Restoration and recovery planning and design for freshwater ecosystems and species.

Theses and Dissertations:

- Frissell, C.A. 1992. Cumulative effects of land use on salmon habitat in southwest Oregon coastal streams. Doctoral dissertation, Oregon State University, Corvallis.
- Frissell, C. A. 1986. A hierarchical stream habitat classification system: development and demonstration. M.S. thesis, Oregon State University, Corvallis.
- Frissell, C. A. 1982. Colonization and development of community structure in coexisting Ephemerellid mayflies (Ephemeroptera, Ephemerellidae). Senior Thesis, Watkins Scholarship Program, The University of Montana, Missoula.

Professional Societies:

- Society for Conservation Biology, 1991-present
 American Fisheries Society, 1985-present
 Ecological Society of America, intermittent
 North American Benthological Society, intermittent

Graduate Students Mentored

- Cavallo, B.J. M.S. in Organismal Biology and Ecology, The University of Montana, 1997. Thesis title: *Floodplain habitat heterogeneity and the distribution, abundance, and behavior of fishes and amphibians in the Middle Fork Flathead River Basin, Montana.*
- Adams, S. B. Ph.D. in Organismal Biology and Ecology, The University of Montana, 1999. Dissertation title: *Mechanisms Limiting a Vertebrate Invasion: Brook Trout in Mountain Streams of the Northwestern USA.*
- Hitt, N.P. M.S. in Organismal Biology and Ecology, The University of Montana, 2002. *Distribution and potential invasion of introduced rainbow trout in the upper Flathead River drainage.*
- Carnefix, G. M.S. in Organismal Biology and Ecology, The University of Montana, 2002. Thesis title: *Movements and ecology of bull trout in Rock Creek, MT.*
- Hastings, K. Ph.D. in Organismal Biology and Ecology, The University of Montana, 2005. Dissertation title: *Long-term persistence of isolated fish populations in the Alexander Archipelago.*

Reviewer for Journals and Agency Publications:

Canadian Journal of Fisheries and Aquatic Sciences, Conservation Biology, Ecological Applications, Environmental Management, Fisheries (AFS), Freshwater Biology, North American Journal of Fisheries Management, Oikos, Transactions of the American Fisheries Society, Fundamental and Applied Limnology, USDA Forest Service General Technical Reports

Member of Board of Editors for Journals:

Conservation Biology, 1996-2000

Appointments to Review Panels and Scientific Advisory Committees:

USEPA Bristol Bay Watershed Assessment Team, Subcontractor on road and pipeline impacts, through University of Alaska Anchorage and NatureServe, 2011-2012.

Independent Expert Review Panel for King County Water and Land Resources Division's Project Scoping and Implementation Practices. 2011-12.
Subcontractor to MWH (Montgomery Watson Harza) for King County Dept. of Natural Resources and Parks, Seattle, WA.
<http://www.kingcounty.gov/environment/dnrp/publications/wlrd-expert-review-report.aspx>

Umpqua Watersheds Science Advisory Council, Sponsored by Umpqua Watersheds, Inc., 16-17 November 2010, Roseburg, OR.

Wychus Creek Restoration Monitoring Plan Review Panel, sponsored by Upper Deschutes Watershed Council and Bonneville Environmental Foundation. 2 October 2009, Bend, OR.

Landscape Pattern Task Group, *State of the Nation's Ecosystems* report. 2003-2007. H. John Heinz III Center For Science, Economics and the Environment. Washington, DC.
<http://www.heinzctr.org/Programs/Reporting/Working%20Groups/Fragmentation/index.shtml>

Science Review Team, King County Normative Flow Studies Project. 2002-2005, Seattle, WA. <http://dnr.metrokc.gov/wlr/BASINS/flows/science-review-team.htm>

Science Advisory Panel, Westside. Governor's Salmon Restoration Funding Board, Washington State, February 2000.

Ecological Work Group, Multi-species Framework Process and Subbasin Assessment Process, Northwest Power Planning Council 1998-2000.

Peer review panelist for U.S. Environmental Protection Agency/National Science Foundation Water and Watersheds Grants Program for 1997. 7-9 May 1997.

Scientific Group for the Governor's Bull Trout Restoration Team, State of Montana, 1994-2000

Oregon Department of Environmental Quality, 1992-95: Temperature Standards Review Subcommittee of the Technical Advisory Committee, Triennial Water Quality Standards Review

Scientific Assessment Panel for amphibian species, Eastside Oregon-Washington and Upper Columbia Basin EIS, US BLM and US Forest Service, 1994

Oregon Department of Forestry, 1990-93: Technical Advisory Group for the Forest Practices Monitoring Program; Wetlands Technical Group; Stream Protection Advisory Panel.

Selected Papers and Seminars Presented Since 1993, continued:

- Frissell, C.A. 1997. Spatial assessment of biological status and biodiversity loss. Invited seminar, National Research Center for Statistics and the Environment, University of Washington, Seattle, WA, 14 January.
- Frissell, C.A., and B.J. Cavallo 1996. Thermal and hydrologic diversity of aquatic habitats mediated by floodplain complexity and hyporheic flow exchange in an alluvial segment of the Middle Fork Flathead River, Montana, USA. (Abstract). Annual Meeting of the N. Am. Benthological Society, Kalispell, MT, 3-8 June.
- Frissell, C.A. 1995. Ecological principles for watershed restoration. (Abstract). Invited paper for Workshop on Watershed Restoration: Principles and Practices, Annual Meeting of the American Fisheries Society, Tampa, FL, 27-31 August.
- Frissell, C.A. 1995. Managing native fish and their ecosystems: let's get (spatially) explicit! (Abstract). Invited panel presentation at Montana Chapter of the American Fisheries Society, Chico Hot Springs, MT, 6-10 February.
- Frissell, C.A. 1995. Birth in the fast lane: sediment transport, human disturbance, and reproductive strategies of salmonid fishes in Pacific Northwest streams. (Abstract). Invited paper for Symposium on Influence of Geomorphic Processes on Terrestrial and Aquatic Ecosystem patterns and Processes, Annual meeting of the Ecological Society of America, Snowbird, UT, 31 July-3 August.
- Frissell, C.A. 1995. Resource management impacts on bull trout populations. Invited panel presentation for Searching for Solutions: Solving the Bull Trout Puzzle Science and Policy Conference, Andrus Center for Public Policy, Boise State University, Boise, ID, 1-2 June.
- Frissell, C.A. 1995. Watershed dynamics: natural pattern and process and some consequences for ecosystem management. Invited presentations at Managing Terrestrial Ecosystems Relative to Past and Present Disturbances: A Workshop Integrating Fire, Range, Fish and Wildlife Habitat and the Practice of Silviculture in the Northern Region. U.S. Forest Service, Missoula, MT, 14-16 March.
- Ebersole, J.L., C.A. Frissell, and W.J. Liss (co-presenters). 1995. Invasion of non-native fishes in northeast Oregon and western Montana streams: potential impacts of climate change. (Abstract). Oregon Chapter of the American Fisheries Society, Ashland, OR, 15-17 February.
- Frissell, C.A. 1994. Watershed restoration strategies. (Invited presenter and session convener) Watersheds '94 Expo, US Environmental Protection Agency and Center for Streamside Studies, University of Washington. Bellevue, WA, 27-30 September.
- Frissell, C.A. 1994. A hierarchical approach to restoration of riverine ecosystems. Invited paper at Symposium on Aquatic Habitat Restoration in Northern Ecosystems, Alaska Chapter of the American Fisheries Society, Girdwood, AK, 20-22 September.

Selected Papers and Seminars Presented Since 1993, continued:

- Frissell, C.A. 1994. An integrated, biophysical strategy for ecological restoration of large watersheds (Abstract). Annual Conference of The Universities Council on Water Resources, Big Sky, MT, 3-5 August.

- Frissell, C.A., and J.A. Stanford. 1994. Designing a watershed reserve network to protect and restore aquatic biodiversity in the northern Rocky Mountains (Abstract). Annual meeting of the Montana Chapter of the American Fisheries Society, Billings, Montana, Billings, MT, 9 February.
- Frissell, C.A. 1994. The Endangered Species Act: principles for the protection and recovery of fishes. Invited panel presentation, annual meeting of the Idaho Chapter of the American Fisheries Society, McCall, ID, 24-26 February.
- Frissell, C.A., W.J. Liss, B. Doppelt, and D. Bayles. 1993. A new, ecologically based restoration strategy for Pacific salmon in the Pacific Northwest (Abstract). Annual meeting of the American Fisheries Society, Portland, OR, 29 August-2 September.

Technical Workshops Organized (selected):

- Lead organizer and facilitator, New Science Implications for the Aquatic Conservation Strategy of the Northwest Forest Plan. Sponsored by the Coast Range Association, 2-3 December 2013, Portland, OR.
- Co-organizer, with M. Scurlock and R. Kattelman: SNEP Plus 15 Years: Ecological & Conservation Science for Freshwater Resource Protection & Federal Land Management in the Sierra Nevada. Sponsored by Pacific Rivers Council, Sierra Forest Legacy, UC Berkeley School Environmental Design, UC Davis Center for Watershed Science, and California Trout; 12-13 December 2011, Davis, CA.
- Organizer and facilitator, Workshop on Science for River and Watershed Conservation. Sponsored by Campaign for Montana's Headwaters, 7 October 2010, Flathead Lake Biological Station, Polson, MT.
- Co-convener, with M. Scurlock and Kristen Boyles: Technical Workshop on Science for Forest Planning. Sponsored by Pacific Rivers Council and Earthjustice, 29 June 2010, Seattle, WA.
- Organizer and panelist, Umpqua Independent Science Council. Sponsored by Pacific Rivers Council, 2010-2011.
- Co-organizer and panelist, with Deanne Spooner and David Bayes: Workshop on Economics of ESA Critical Habitat Policy, sponsored by Pacific Rivers Council and San Francisco State University, October 4-5, 2007, San Francisco, CA.
- Organizer and coordinator of Science Panel on Roads and Watersheds, sponsored by Pacific Rivers Council, 10-11 November 2006, Forest Grove, OR.
- Organizer and coordinator of the Recovery Science Panel for the Western Native Trout Campaign. Sponsored by Pacific Rivers Council, meeting 2-3 March 2002, Portland, OR.

Technical Workshops Organized (selected), continued:

- Organizer and coordinator of Biodiversity Workshop, Consortium for the Study of North Temperate Montane Ecosystems. A cooperative research venture of The University of Montana and Montana State University, supported by the NSF EPSCoR program. 4 February, 1997 Missoula, MT.
- Scientific Workshop on Large Basin Restoration: Grande Ronde River (co-organizer). 21-22 March 1993, La Grande, OR. Sponsored by The Pacific Rivers Council.
- Scientific Workshop on Large Basin Restoration: South Umpqua River. 16-18 September 1992, Roseburg, Oregon. Sponsored by The Pacific Rivers Council.
- Scientific Workshop on Large Basin Restoration: Lower Rogue River. 21-23 October 1992, Gold Beach, OR. Sponsored by The Pacific Rivers Council.

Other Panels and Workshops Attended by Invitation since 1994 (selected):

- Invited Review Panelist, Workshop on Linking Habitat Characteristics to Salmon Data. 29-30 September 1999, National Marine Fisheries Service, Northwest Fisheries Science Center, Seattle, WA.
- Invited participant, Yellowstone to Yukon Aquatic Conservation Science Workshop. 20-22 August 1999, Flathead Lake Biological Station, The University of Montana, Polson, MT.
- Invited Panelist, Workshop on Options for Restoring Salmon Habitat in the Mainstem Snake and Columbia Rivers. Pacific Northwest National Laboratory-Battelle, 19 August 1999, Kennewick, WA
- Panelist at State of Oregon/National Marine Fisheries Service Memorandum of Agreement Committee Workshop: Cumulative Effects of State and Private Forest Practices on Salmon Habitat. 21 April 1998, Salem, OR.
- Invited participant in a scientific workshop, Multiple Stressors in Ecological Risk Management. Sponsored by the Society for Environmental Chemistry and Toxicology and the USEPA, 13-18 September 1997, Pellston, MI.
- Society for Conservation Biology Workshop: Communicating with the Media (panel member). 9 June 1997, Victoria, British Columbia, Canada.
- Invited speaker for a workshop, Continuing Education in Ecosystem Management. Sponsored by the University of Idaho. Catchment scale processes and linkages between landscape and stream conditions. 31 January 1997, Moscow, ID.
- The Nature Conservancy, Aquatic Classification Workshop (invited presenter). 9-11 April 1996, Cedar Creek Farm, MO.
- Kenai River Community Forum (keynote speaker and panelist). The Nature Conservancy of Alaska, USEPA and USFWS, 19-21 April, Soldotna, AK.
- Conservation Biology and Management of Interior Salmonids (invited presenter and session co-moderator). USDA Forest Service Intermountain Research Station and Utah State University, 4-5 October 1995, Logan, UT.
- Eastside Ecosystem Planning Workshop. Sierra Club Legal Defense Fund, 16 December 1994, Portland, OR.

Other Panels and Workshops Attended by Invitation since 1994, continued:

- Co-instructor at workshop series on Watershed Restoration and the "Rapid Biotic Response Strategy" for Riverine Ecosystem Restoration, sponsored by The Pacific Rivers Council, 1993-95, California, Oregon, and Washington.
- Fire/Salvage and Aquatic Ecosystems Policy Workshop. The Pacific Rivers Council, 15 December 1994, Portland, OR.
- Panel on Forest Health Issues, Native Forest Network annual conference, 13 November 1994, Missoula, MT.
- Workshop on Watershed/Fisheries Cumulative Effects Analysis, sponsored by Headwaters, The Pacific Rivers Council, USDA Forest Service, and Bureau of Land Management. 29 September-2 October, 1994, Ruch, OR.
- Boise Funders' Scoping Meeting, sponsored by Bullit, Harder, and Lazar Foundations, 30-31 August 1994, Boise, Idaho.
- Scientists Briefing for U.S. Senate staff on post-fire logging and forest management and freshwater resources. Washington, D.C., 18-19 September 2006.

Other Presentations and Outreach (Selected):

- Invited testimony on federal land management and the future of salmon and aquatic biodiversity in the Pacific Northwest, to the U.S. House of Representatives, Subcommittee on National Parks and Public Lands, Washington, D.C., 11 March 1993.
 - Briefing for Congressional representatives and staff on federal lands management and conservation and recovery of salmonid fishes and riverine ecosystems, Washington, D.C., 22 January 1993.
 - Invited testimony to the 1991 Oregon State Legislature, on panel representing the Oregon Chapter of the American Fisheries Society, on the status of native fishes, impacts of forest practices on fish habitat, and the need or changes in environmental regulation.
 - Invited testimony to the Oregon Board of Forestry Forest Issues Forum, December 1990, on cumulative impacts of forest practices on native aquatic species and the need for changes in forest management.
 - Worked with Oregon Public Broadcasting to describe our research project and its significance in a 15-minute segment of the television program, Oregon Field Guide, first aired in June 1990.
 - Presented seminars, informal presentations, lectures, and discussions at research review meetings, as guest speaker in classrooms and public interest groups, at state board meetings, at workshops, and on field trips with foresters, geotechnical personnel, fishery and watershed managers, and conservationists.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Barbara Fristoe

Comments:

My name is Rhonda Fritcher and I live in New Era, Michigan.

There is no compelling reason to harvest any of this forest. Just like the oil industry, money and greed and exploitation/rape and plunder of the earth's resources are the the driving force behind these actions. Will the rich ever have enough?

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Rhonda Fritcher

A public mission is to serve all of the people , in this case, to protect and preserve natural and cultural resources for the enjoyment and use by the public, not to serve the interests of corporations who will destroy the resources to further their own gain. We have other means of providing energy , if only we would pursue them. Cease. Stop this carnage . Now. Thank your

Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Deb Fritzler

Comments:

My name is Catherine Frizat and I live in Burbank, California.

Clean Air is vital to the population of the USA and the world. Without clean air we cannot live. This is common sense. Everything should be done to ensure that US citizens breathe clean air and are not subjected to pollutants that endanger their health and life. Please protect our communities and take all necessary actions to PREVENT any change to the Once In Always In policy.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Catherine Frizat

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Title:
Comments:
To Whom It May Concern:

I am writing you to urge you to choose Alternative 1 of NO ACTION and keep the Roadless Rule in place for all land that it protects in the Tongass National Forest.

There are at least 3 important reasons why I feel that this is important:

1) Climate Change and Carbon Sequestration:

In a time when there is a scientific consensus regarding our planet facing an existential threat of climate change, CO2 sequestration is an essential component of tackling this issue. Science has also concluded that Old Growth trees sequester more carbon than smaller trees. According to a Time Magazine article written in 2015, new studies show that Old Growth Trees are much more effective at sequestering more carbon than younger trees.

<http://science.time.com/2014/01/15/study-shows-older-trees-absorb-more-carbon/>

As a Citizen of the United States, I feel that it is invaluable to not harvest old growth forests because they are an important natural resource for CO2 sequestration during a critical time in fighting climate change and the earth's temperature rise.

The Tongass National Forest is the largest carbon sink of all U.S. Forests.

2) Respecting Native Sovereignty

6 tribal governments in Southeast Alaska have stated that they are against any change in the roadless rule. The DEIS has not taken into consideration their needs.

Can the DEIS be redone to better reflect the stakeholder position of Southeast Alaskan tribes? I did not see adequate representation of their input or perspective in the DEIS. This land is sacred to these tribes, and opening up this land to logging goes against the very way of life of these tribes' relationship with the land.

3) logging, Salmon fisheries and Tourism.

As stated in the DEIS, Tourism and Fishing are significantly larger portions of the economy in this region, over 25 %. Logging makes up less than 1%. the logging market is in further decline, and regardless of whether this land is logged, people in the logging economy will soon need to find new employment. The majority of timber from this region isn't going to building infrastructure in the U.S. but exported to Asia. Why should this public natural resource that is so valuable for conservation, tourism, and fishing habitat be destroyed for a sliver of the the economy that benefits only a few dozen stakeholders? According to a Taxpayers for Common Sense report, over 600 million dollars in federal subsidies has been lost to Tongass Logging since 1999. the 30 million dollars in subsidies to log old growth should be used instead to promote more sustaining rural economic subsidies, for example training loggers to become sustainable foresters, since their industry is on a decline and they will need to be retrained soon anyway.

<https://www.taxpayer.net/energy-natural-resources/new-report-taxpayers-losing-hundreds-of-millions-of-dollars-on-tongass-timber-sales-over-last-two-decades/>

4) Salmon Habitat

The DEIS states that none of the Alternatives proposed would have any significant impact on salmon watershed habitat. However in the DEIS there is little scientific evidence to support this claim. Scientists who are familiar with the ecology of Tongass National Forest claim that this is false.

Will you conduct further study of the environmental impact the proposed alternatives will have on salmon habitat? According to the USFS, The combined economic impact of salmon related economy coming out of SE Alaska was 986 Million\$ in 2007. Over 49 million salmon are harvested every year that were spawned in the Tongass Watershed.

https://www.fs.usda.gov/Internet/FSE_DOCUMENTS/stelprdb5408056.pdf

Salmon are an important cultural, economic, and environmental resource. When both scientists, fishermen, tribes, environmental organizations, and every day citizens are all saying that they are concerned a change in the current status of the Tongass National Forest will have on salmon habitat will have, I urge you to do more thorough study on this issue and bring in a task force of independent researchers to study this further.

Will you put any decision on this matter until the effects of this decision on salmon habitat can be adequately studied? the Current DEIS does not do a sufficient job at fully studying this issue.

There is less than 2% of old growth forest left in the U.S. National Forests are a public resource that belong to the public. Please don't sell out this resource to a handful of multinational logging export companies at the expense of devastating a national treasure forever. This habitat takes hundreds of years to cultivate and evolve, and could be wiped out in days by short

sided decision making.

I urge you to choose alternative 1 of NO ACTION on this issue.

If not, urge you to do a more thorough EIS that sufficiently studies the effects this decision would have on habitat, sovereign tribal nations, salmon economies, and tourism. The Current DEIS was hastily drafted and does not have sufficient research or input from stakeholders taken into consideration when it was drafted.

Sincerely,

Brel Froebe

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

My name is Amanda Frost and I live in Santa Barbara, California.

The national forests belong to the people, not the President!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Amanda Frost

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Andrew Frost

Comments:

Keep the Roadless Rule in Place for the Tongass National Forest

Dear Interdisciplinary Team Leader, Alaska Roadless Rule Ken Tu,

I am an outdoor enthusiast writing to express my interest in continuing to protect the Tongass National Forest and its backcountry and roadless areas from unnecessary logging and development.

The Tongass has tremendous value for outdoor recreation in the region, and also provides clean water, clean air, and wildlife habitat, all of which are foundational to the economic and ecological health of Southeast Alaska. Road building, logging, and development should continue to be prohibited in the Tongass's roadless areas through upholding the Roadless Rule. This is one of the few remaining intact old growth forests left in our country. It's value as an intact temperate rain forest biome exceeds that of the extraction industry's interests.

The Roadless Rule was created after a lot of public outreach. It's a popular and sensible approach to land management and works for those who are impacted the most, here and now, and safeguards the natural diversity that our future generations will rely upon for their wellbeing.

I am also a scientist. As a scientist I hope you and your colleagues conduct a rigorous unbiased data driven scientific evaluation of the question at hand and let the data drive the final decision.

Sincerely,

Charles Frost

Tongass roadless rule

I am opposed to changing the Tongass roadless rule. Uninterrupted ecosystems are a rare treasure and will become increasingly rare with this administration's approach to resource management. Option 1 is the only option of the 6 that I support.

Kind regards,

Charles

We need to set an example for the rest of the world and to reflect our values. A small minority of corporations vs. the health of our country and the world is what we have here. More valuable than the toilet paper that can come from elsewhere is preserving the ever growing rarity of a roadless old growth forest.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Comments:

Because the federal government is currently in the hands of a criminal cabal calling itself the Republican Party, I assume any change in federal designation to any lands controlled by the government will be in order to direct profit to the rich corporations and individuals that own and operate said criminal cabal. As such these changes will, of course, be destructive to the lands in question and harmful to any living creatures that live on or enjoy the beauty of such lands.

Therefore I am writing to oppose any changes to any public lands as long as such changes are backed by the greedy and conscienceless crooks now running the federal government.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Peggy Fry

Comments:

My name is jeremy fryberger and I live in Ketchum, Idaho.

Closely related to fear of the unfamiliar, scarcity (i.e. not having enough (enough food, land, protection, jobs, status, or whatever) has always been humankind's greatest concern. Such deeply instinctive, constant, and at least partly (often entirely) subconscious fear, meanwhile, exists within all of us, independent of nationality, race, gender, wealth, politics, religion, etc.

Humanity's two main responses to the threat of not enough, however, couldn't be more distinct. On one hand, scarcity has always been the basis of conflict: others compete with/jeopardize me/my tribe. Others, then, are adversaries who must be weakened, repelled, even destroyed.

Which others? Per evolution, different others, of course, who, by whatever their differences, are seen as less worthy, less valuable, less human than we are; the greater the perceived unlikeness, the greater this tribal intolerance, injustice, and aggression.

Sadly, such obsolete (yet extremely persistent) tribal instincts have also always been the basis of conservatism. (Note that in less developed nations, it often holds true for all political factions (i.e. Left, Center, and Right). Whether about economics, health care, immigration, guns, foreign policy, religious issues, size/purpose of government, or any other topic of debate, the American Right's position is ultimately: I/we matter more than you. Stemming from our ancient fear of not enough, conservatism is merely self-interest via contempt, repression, and theft.

Worse, countless immoral, well-connected, often malevolent entities (chasing profit and power) work unceasingly to manipulate the unaware. In fact, stoking tribalism to better control/control a target group is likely as old as humanity itself. Yet, regardless of where on the planet one lives, and no matter how rich or poor a person/place may be, the effect of tribalism is simply division, hostility, and decline, during which power, money, and privilege drain ever more skyward.

Collaboration, humankind's other typical response to scarcity, has (ironically) always been the catalyst for peace, and for our universal advancement. Based on Christ-like compassion and empathy, plus the God-given, unalienable, equal humanity of all, mutually beneficial cooperation continues to be the cornerstone of our species' triumphs and progress.

Correspondingly, it is crucial for all of us to recognize that intolerance of innate differences, particularly when combined with entitlement and repression, is not just the source of the world's constant strife and suffering, but also the ultimate enemy of solutions. In fact, the only distinction that matters is the one which recognizes the interwoven, inseparable nature of all living things.

To truly unleash humankind's enormous problem-solving capacity (i.e. its potential for massive, ever-increasing benefit to all) we must therefore let go of our self-destructive tribal tendencies. Instead of endless us/them prejudice and disintegration, see your role in the evolution of humanity as part of a forever expanding bucket brigade, conveying gradual, continuous, enduring gains for everyone.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nation's most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generates an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Forest

I would like more information on this bill!

However, the information I do have states that trump and his administration are planning to open a road by cutting down a forest because they somehow believe it will provide economic growth. This isn't true. What this will do is create a huge problem for the people living around that area and in this world has tree help bring us oxygen and control or offset carbon emissions created by business and humans. We need to stop taking away habitats for economic growth and figure out how to use current infrastructures and make budgets for refurbishing building and lands we are have unoccupied. Making unused factories usable again and putting money into educating people to do jobs with these machines.

Taking habitats and cutting tree is NOT the answer. I am not for destroying this forest.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

It is my voice and desire that their be no exemption from the current Alaska Roadless Rulemaking #54511 granted that would allow the Tongas National Forest to be excluded from protection of any and all future road development.

[Position]

Date submitted (Alaskan Standard Time): 12/17/2019 12:00:00 AM

First name: Nicole

Last name: Fryling

Organization:

Title:

Comments:

My name is Nicole Fryling and I live in Shelton, WA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

Please protect the roadless rule in the Tongass National Forest! This forest is of vital importance for wildlife and species diversity, carbon sequestration, wild spaces for future generations, and its pure and simple value as one of the last existing old growth forests of its kind. As public land, the people deserve its protection.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), medium-impact recreation (FS cabins, trails, mooring buoys, 3-sided shelters), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, develop more recreational opportunities, like trails and cabins, support small-scale, sustainable logging, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes. Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Susan Fuchs

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

I write to you as Conservation Chair of the South Bend-Elkhart Audubon Society, an Audubon chapter of over 700 members. We have been protesting the expansion of roads in the Tongass for years.

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,
Laura Fuderer
South Bend, IN 46637

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Comments:

My name is John Fuerst and I live in Orlando, Florida.

Please dont allow our forests to be destroyed!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, John Fuerst

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

Dear Chief Christiansen,

I live and work on the lands and waters of the Tongass National Forest. The health of the Tongass National Forest is critical to sustaining my way of life in this rugged region. From hunting and fishing, to hiking and camping, to our tourism and commercial fishing-based economies, we rely on the intact habitat that the roadless areas of the Tongass contain. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Southeast Alaska.

Prioritizing one antiquated industry over private sectors is bad business, and bad for Southeast Alaska. I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams.

Comments to oppose modification to the Roadless Rule

Dear U.S. Forest Service,

The Roadless Rule helps protect old-growth habitat for birds like the Prince of Wales Spruce Grouse and Northern Goshawk, as well as for mammals like wolves and deer. Opening roadless areas to more logging and roads will fragment the forest and eliminate more of the big old trees that these animals rely on.

Yet, all of the action alternatives in the Draft Environmental Impact Statement allow more roadbuilding and logging across the Tongass National Forest. Logging roads and timber operations cost tens of millions of taxpayer dollars every year, with zero return on investment. Meanwhile, these destructive activities degrade the naturally sustainable wealth of salmon, wildlife watching, and tourism opportunities.

It is time to stop opening more and more acres to the timber industry and instead bolster protections to the old-growth forests and wild areas on the Tongass. I urge you to select the "No Action" Alternative (Alternative 1) and allow the Roadless Rule to remain intact on the Tongass National Forest.

Sincerely,

Isabel M Fuica

Comments:

My name is Lisa Fujihara and I live in San Jose, California.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Lisa Fujihara

Maintain protections for Alaska Roadless Rule

Dear Secretary Secretary Perdue,

I live in Southeast Alaska where I operate a business commercially catching salmon on hook and line. My business and my family's income depends on the Tongass National Forest continuing to be a healthy environment for wild salmon to rear and to spawn. Hence I support Option 1- the continuation of the Roadless designation for the Tongass. In addition to my fish catching business, I am also a co-owner of a fish processing business- Seafood Producers Cooperative (SPC) and I serve on the Board of Directors of SPC. This \$40M business is one of the largest employers in Sitka. SPC depends heavily on Tongass fish and has filed written comments in support of Option 1 as well. If SPC were to be unable to purchase Tongass salmon over 100 employees would lose their jobs.

In addition to being a commercial fisherman, I am also a subsistence hunter. Tongass deer or Tongass salmon are on my family's table nearly every day. Thousands of residents of Southeast Alaska hunt and/or fish to feed their families. The fish and game resources of the region have sustained the local economy since pre-contact times and are more than adequate to do so sustainably for the foreseeable future.

The Alaska Sustainable Fisheries Trust' SeaBank program has calculated that the fishing industry alone provides a sustainable input of about a billion dollars per year to the local economy. This is far too much value to risk a change to the status quo. Option 6 represents the possibility of losing these fisheries that have sustained Southeast Alaska for thousands of years.

I ask that you refer to written comments submitted by the Alaska Longline Fishermen's Association (ALFA) for technical and legal reasons to maintain the Roadless Rule as provided by Option 1 if such arguments are necessary, but the simple reason for doing so is that the risks to doing otherwise far outweigh the potential benefits.

Exempting the Tongass from the Roadless Rule threatens traditional and customary ways of life, food security, hunting and fishing for future generations, some of the last healthy wild salmon populations in the country, the best brown bear habitat in the world, and thousands of tourism and fishery jobs. It also plunges the planet further into a climate crisis and throws away carbon storage opportunities. It makes no sense to trade the growing industry of tourism and the sustainable industry of one of the country's last healthy wild salmon fisheries for the taxpayer subsidized, money-losing destruction of one of our country's and our planet's greatest wild resources.

Thank you for your time. Please select Alternative 1, "No Action," for the Tongass National Forest.

Sincerely,

Sincerely,

Mr. Tad Fujioka

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Title:

Comments:

My name is Amy Fulford and I live in Seattle, WA. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will affect the Tongass National Forest and the Chugach National Forest.

We must continue to protect the Tongass National Forest because of the ecological importance of the many plant and animal species that can be found there, many of which are endangered or rare. Its protection is also important because it is the largest carbon sink in the US and plays a critical role in fighting climate change.

I urge the Forest Service to select Alternative 1, the no action alternative, for the final decision on the Alaska Roadless Rule. This alternative protects the inventoried roadless areas in Alaska that are full of pristine wilderness and provide important fish and wildlife habitat, and already allows for important community and economic development projects. As an American citizen, I value the Tongass National Forest and the Chugach National Forest for its status as America's best natural solution to climate change and its sequestering of millions of metric tons of carbon and mitigating climate change, its wild salmon populations and the world-class fishing opportunities, its huge swaths of intact ecosystems and all the biodiversity it contains, its status as the largest intact temperate rainforest in the world, the recreational opportunities it provides, the high density of incredible wildlife it contains, to keep public lands wild for future generations, its status as a national and global treasure, the lifestyles of the indigenous communities that the forest supports. A full exemption does not protect these priorities, nor does it effectively balance economic development with the countless other benefits provided by roadless areas. I would like the Forest Service to manage roadless areas for low-impact recreation (camping, hiking, hunting, foraging, etc), passive/active watershed restoration (stream and habitat) to improve/maintain roadless characteristics (culvert removal/replacement, improve fish passage, wildlife thinning, etc). It is important to me that high-value intact habitat including the T77 watersheds and the TNC conservation priority areas retain their roadless protections in any alternative selected.

The Forest Service is wasting taxpayers' valuable time and money by trying to prop up a failing timber industry in Southeast Alaska. The nonpartisan, independent taxpayer watchdog Taxpayers for Common Sense reported that the Tongass timber program has losses of over \$600 million of taxpayers money in the past 20 years. I would rather see my taxpayer dollars used to restore salmon habitat that was hurt by past logging practices, perform restorative actions that support wildlife populations on previously degraded landscapes that support wildlife populations, establish the economic value of the carbon stored in the Tongass. We need to stop subsidizing the clearcutting of old growth on the Tongass through taxpayer funded roadbuilding. If a full exemption were chosen, it would not create opportunities and would instead prioritize the special interests of one industry over the interests of the entire American public.

The Tongass is Americas homegrown natural solution to climate change. The forest sequesters 8% of the carbon stored in forests throughout the contiguous US states, some 3 billion metric tons of it. We must take action to mitigate and adapt to climate change, and maintaining the Tongass in a roadless state is critical for a sustainable future.

I urge the Forest Service to listen to the voices of the American people and prioritize them over corporate interests. The Forest Service should strengthen public involvement in developing land management policy and focus on broadly supported work rather than allowing special corporate interests to guide policy changes.

Attempting to exempt inventoried roadless areas on the Chugach National Forest from the Alaska Roadless Rule adds further insult to injury, and this proposal has not received any sufficient environmental impact analysis or public input. Choosing a full exemption will not create a long lasting, durable solution for roadless areas in Alaska it will only increase the legal challenges, uncertainty for businesses, and conflict over these forests going forward.

Comments:

I oppose the proposal to change the Roadless Area Conservation Rule. I stand with the several tribes who endorse the No Action alternative.

The rule protects areas that Alaskans prize. The remaining old growth groves are important.

Roads interrupt ecosystems: When I hike I wear tall rubber waterproof boots, because the forest stays damp, there are puddles and pools. My experiences have taught me that the water moves through the area, moving nutrients. Running a bulldozer there to lay down a road is destructive. Thus we should be sure to limit roadbuilding. The Forest Service has approved some roads, even while following the Conservation Rule.

The analysis includes the statement that eliminating the Roadless Rule will not affect current logging and sawmill jobs. Preserving the forest without roads protects resources we use now and will want in the future, including stored carbon and clean water.

I support the no-action alternative. Maintaining the Roadless Rule on the Tongass NF is useful in keeping the old-growth temperate rainforest intact, protecting the sustainable and profitable salmon fisheries, and sustaining Alaska tourism.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Gail Fuller

Comments:

My name is Harold Fuller and I live in Salome, Arizona.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Harold Fuller

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

taking away environmental protections is not a way to help the economy. There is a win/win, a strong economy that keeps healthy air and water rules in place. Why would you want to hurt people and the planet, by rolling back important environmental protections? You will be known as the president who hurt the environment and people's health.

Comments:

Choose "No Action" Alternative for the Tongass National Forest

Dear U.S. Forest Service,

America's Tongass National Forest is unique and irreplaceable, as well as crucial for sequestering carbon on our planet.

Therefore, I strongly oppose the Forest Service's plan to eliminate "Roadless Rule" protections for the Tongass National Forest and urge you to select the "no action" alternative instead.

As you know the Tongass is America's wildest remaining national forest, with more than 9 million acres of roadless areas. And it's home to a wide range of wildlife, including Alexander Archipelago wolves, grizzly bears and salmon. It also stores a vast amount of carbon, with its centuries-old trees serving as a carbon-reserve life raft in this time of climate change. Logging releases most of that carbon into the atmosphere.

Your proposal to open the door to clearcutting and bulldozing is irresponsible and fundamentally threatens these values. The Tongass belongs to all Americans and shouldn't be sacrificed to the timber industry, which provides a small fraction of the jobs and income in Southeast Alaska compared to tourism and fishing - both of which rely on intact forests to thrive. It's even more important to save these last remaining roadless forests because your agency has fragmented and logged so much of our national forests, harming wildlife and waters along the way.

Further, I oppose your plan to allow the agency to open any of the 5 million acres of roadless areas on the Chugach National Forest to bulldozing and clearcutting for logging. This is simply a backdoor repeal of the 2001 Roadless Rule, which protects all roadless lands because of the critical role they play in protecting pure water, secure wildlife habitat and remote recreation.

Please - think of future generations by selecting the "no action" alternative to maintain "Roadless Rule" protections for the Tongass and Chugach.

Sincerely,

Hannah Fullmer

Fullerton, CA

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trumps plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of Americas best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Hugh Fullmer

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Don Fulton

Comments:

My name is Erin Fulton and I live in Sitka, Alaska. I have lived in Sitka for seven years. I work for a locally owned small cruise ship company, where I am an onboard naturalist and expedition leader. The most common reason people come to Alaska as a tourist is a chance to see and experience wild places because they are so rapidly disappearing around the globe. Tourism is a big part of our economy in Tongass communities, and keeping the Roadless Rule intact helps to ensure those wild places remain that way and will continue to attract tourists.

Beyond my day job dependence on an intact Roadless Rule, I also rely on healthy, intact ecosystems in order to get food and as a place to recreate and be a happy/healthy human being. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. The rule is working fine as it is by balancing the conservation of our fish and wildlife habitat with important development projects.. I depend on roadless areas in the Tongass National Forest for economic livelihood, healthy fish habitat, foraging and gathering wild foods, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations, fiscal responsibility and saving taxpayer dollars . A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because The vast majority of public comment from the people who live and work and depend on the Tongass are in favor of No Action. A Full Exemption would be a slap in the face of all of us who live here, effectively ignoring the overwhelming public opinion. As the Rule exists now, we can still work to explore new projects and business opportunities. There is no reason for the Rule to be removed. It helps a scant few people who live here, if it really helps any at all.. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should improve and streamline existing permitting processes for important community

projects rather than rehashing old conflicts invest in creating and maintaining recreation infrastructure transition to second growth logging devote resources to support our fishing and visitor industries.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Last name: Fulton

Organization:

Title:

Comments:

My name is Kristine Fulton and I live in Sitka, AK. Greetings, I have lived in the Tongass National Forrest for 39 years. The beauty and natural resources of this magnificent forest have provided my family with years of countless food resources as well as recreational opportunities. South east Alaska is a prime tourist destination because of these resources. Please keep the Roadless Rule and protect the forests, wildlife, and resources for all to enjoy. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, hunting, subsistence harvesting, the peace and solitude I find in nature, recreating, practicing my culture, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations, fiscal responsibility and saving taxpayer dollars . A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around Baranof Island, Chichagof Island, Admiralty Island, the northern mainland above Port Snettisham (around Juneau), the central mainland from Hobart Bay to Stikine River, the southern mainland from Bradfield Canal to Dixon Entrance Kupreanof Island, Kuiu Island, Wrangell and Etoilin Islands, Prince of Wales Island, Revillagigedo Island (near Ketchikan), Yakutat forelands, all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because It discounts the voices of many Southeast Alaskans

It will harm our existing economic drivers: tourism. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries transition to second growth logging invest in creating and maintaining recreation infrastructure improve and streamline existing permitting processes for important community projects rather than rehashing old conflicts.

This is a large forest, one of the largest remaining forests in the United States. Please leave it alone.

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

I would like to see the Alterate 6 to be applied to this ruling. The Tongass has been over protected and needs to be allowed to use this timber for jobs, and public revenue. Harvest makes for a healthy forest and wildlife. Harvest can also help make fire breaks in the event of a fire. Roads make access for all to enjoy the forest. No roads no can see the actual forest.

Comments:

My name is Sandi Fults and I live in Cedar Park, Texas.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Keep 'Roadless Rule' Protections for the Tongass National Forest

Dear U.S. Forest Service,

I strongly oppose the Forest Service's plan to eliminate "Roadless Rule" protections for the Tongass National Forest and urge you to select the "no action" alternative instead.

As a soon to be geologist, I understand both sides of the story - the need for resources and the need for wilderness protection. Nationally preserved lands were set in place to protect our Nation's wilderness and resources, and opening up these lands to irresponsible practices, private business, and construction does not do so. National lands are not to be opened to private business for profit. They are set in place to preserve wilderness habitat, wildlife, fresh water, and most importantly the lungs of our planet. If we allow this to proceed one of the largest carbon stores and oxygen producers on the planet will be decimated and accelerate the environmental and climate crisis that our planet faces. This also sets the stage for other protected lands around our country to be opened up to private business and construction.

Please - think of future generations by selecting the "no action" alternative to maintain "Roadless Rule" protections for the Tongass and Chugach.

Sincerely,
Donald Fuorry

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

We must protect our salmon fisheries, we must look to the future of our forests and work to sustain the old growth left. As a 40 year resident, home owner, and commercial fisher the future of salmon, the forest, and local economies are important to me.

I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

Comments:

My name is Zack Furer and I live in Basalt, Colorado.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Zack Furer

Comments:

The proposed repeal of the Roadless Rule on the Tongass is a direct result of political and special interest decision-making against the wishes of the public, and threatens the fish and wildlife habitat which makes the Tongass a world-class destination for outdoor recreation.

The Roadless areas of the Tongass, as well as the Tongass 77 salmon priority watersheds, contain highly productive fish habitat and unspoiled wildlands that are critical to the vibrant and ever-growing fishing, guide/outfitter, and tourism industries of southeast, which combine to contribute more than \$2 billion in economic activity and roughly 26% of jobs in the region annually. The proposed repeal of the conservation measures inherent in the Roadless rule is a direct threat to the success and continued contributions of these industries.

The current backlog of road maintenance in the Tongass is \$68 million, and the current backlog of stream restoration for salmon habitat impaired by prior roadbuilding and development is close to \$100 million. Given the inability to address these much-needed repairs, it makes no economic sense to green-light new roadbuilding on the Tongass for non-critical functions.

Many of my clients rely on the roadless areas for their livelihood. Any repeal of the roadless rules will take away from work they have done to protect this and their businesses. Affecting them, affects me. What is not even accounted for in the value of this roadless area are the trickle down affects that can reach businesses like mine that have clients that rely on this being protected. We need no more roads in this area.

Thanks,

Ben Furimsky

President/CEO

First name: Norma

Last name: Furlong

Organization:

Title:

Comments:

My name is Norma Furlong and I live in Goldendale, WA. nearly 3 years. I previously in the Matanuska Valley in the 1970s for 7 years. In the interim I have lived in the Pacific NW. I am writing a comment on the Alaska Roadless Rule DEIS because I am concerned with how the Rule and the proposed full exemption will impact my fishing, subsistence harvesting, foraging for wild foods, the peace and solitude I find in nature, recreating, the status of the Tongass as a national and global treasure, the forest's ability to sequester carbon and mitigate climate change impacts, the conservation of resources for future generations .

Out of the alternatives described in the AKRR DEIS I support alternative 1: no action. It protects important fish and wildlife habitat from clearcutting and roadbuilding. I depend on roadless areas in the Tongass National Forest for healthy fish habitat, deer habitat and subsistence hunting, foraging and gathering wild foods, recreating and enjoying nature, carbon sequestration and local climate change mitigation, viewing wildlife, keeping public lands wild for future generations. A full exemption does not protect these values, nor does it effectively balance economic development and conservation of roadless area characteristics. A full exemption from the Roadless Rule and increased logging and roadbuilding will negatively impact the Tongass and what I and many others use and depend on the forest to provide for us.

The Roadless areas on the Tongass that are especially important to me are those on or around all of the inventoried roadless areas on the Tongass. I want the roadless areas in these locations to stay in roadless status in any alternative selected by the Forest Service, and be managed to provide for the uses and activities I listed above. It is important to me that the T77 and the TNC conservation priority areas retain their roadless protections.

I do not support the Forest Services preferred alternative of a full exemption. A full exemption is not in the interests of Southeast Alaskans who live in and use the Tongass National Forest, because I have seen the impact in other states of allowing extensive logging of old growth and hope that Alaska will not follow this example. Any ensuing economic gains would be short lived. The impact on climate change and carbon emissions would be terrible. The State of Alaska says that a full exemption is needed for rural economic development opportunities. However, a full exemption would not help create more rural economic development opportunities, it would instead harm our existing rural economies that are based on the visitor industry and commercial fishing industry.

It would further harm rural economic opportunities because pursuing the same outdated economic model of old growth clearcut harvesting for export stifles innovation and possibility in other sectors, such as mariculture, sustainable young growth harvest, and rural agriculture. If the Forest Service wants to support rural economic development, they should devote resources to support our fishing and visitor industries.

We have a magical resource and environment that will be gone forever if the Tongass is opened up as proposed. There will be no going back on this action once it is approved

I urge the Forest Service to prioritize the voices of Southeast Alaskans over those of our political representation and corporate interests. Choosing a full exemption will not create a long lasting, durable solution for roadless areas on the Tongass. It will only increase the legal challenges, uncertainty for businesses, and conflict on the Tongass going forward.

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.

HC990

Dear Chief Christiansen,

I am a visitor to the lands and waters of Southeast Alaska. The Tongass National Forest is a large part of why I am here. Visitors like me come to witness the vast, beautiful stands of old-growth trees that can't be found on such a scale anywhere else in the United States. We come to crew on commercial fishing boats. We come to hunt, fish and hike in America's largest National Forest. That is why it is important to me that the 2001 Roadless Rule remain in place on the Tongass National Forest. A no-action alternative is the best option for Alaskans and Americans.

I support the Tongass Transition and I would like the Forest Service to continue phasing out old growth clearcutting. This forest is a salmon forest, and the Forest Service should focus on restoring degraded watersheds and fish streams. Please prioritize conservation of the T77 and TNC conservation priority areas in any new Alaska Roadless Rule. Tourism and commercial fishing are at the heart of Southeast's economy, not the antiquated timber industry.

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Paulette Furnia

USDA Forest Service

Attn: Alaska Roadless Rule

P.O. Box 21628

Juneau, Alaska, 99802

We are writing to express our view that Alternative 6 is not the best approach to [ldquo]meaningfully address local economic and development concerns and roadless area conservation needs[rldquo] (DEIS, p. 38). We have been directly involved for several years in efforts aimed at resolving the very issues raised by the State of Alaska in their petition. The mutual goal of a long-term, durable approach is laudable. Your current proposal is not. In fact, Alternative 1 (No Action) best meets this goal. The Roadless Conservation Rule has been adjudicated often, and specifically for Tongass National Forest, to finally represent a fundamentally fair and legally valid long-term, durable solution. Further, your agency has exercised the discretion granted in the Rule to accommodate more than 50 requests for exemption, each granted within a month from original request submittal date.

A fundamental goal is to manage Tongass timber resources so as to conserve its prodigious, world-class temperate rainforest and all the values that flow therefrom, while providing meaningful certainty and stability for local timber industry. Addressing this goal is our primary concern. Our premise is that this is easily achieved under Alternative 1, and requires no change to the status of the Tongass 9.2 million acre roadless area landscape.

While you must consider the State[rsquo]s petition, you are not required to agree with their request. We suggest that you respond by choosing Alternative 1.

At the heart of the concern for the future of Alaska[rsquo]s timber industry is the current state of the industry and the forest landscape itself. Much has been written of the long-term decline of the industry, the reasons for the decline, and the prognosis. We acknowledge this history and the role the Forest Service has played in creating the current reality, but will not add anything new here. Distance from markets, legal liabilities associated with clearcutting old-growth forests, negative effects on other important Alaska assets (such as fisheries), below-cost timber sale and export restrictions, high defect rates in old growth timber, long-term subsidies, lack of value-added manufacturing and archaic industry milling facilities are among the factors that affect the issue. A transition to reliance on young growth supply, increasing value-added product manufacturing, and adroit management can deal with such factors to improve future industry prospects while conserving roadless values. Your proposed Alternative 6 is unnecessary and, far from meaningfully addressing the current situation, will make matters worse by increasing risk and uncertainty.

Why is your proposal unnecessary? Briefly, your 2016 Tongass Land Management Plan (TLMP) and the March 2019 Prince of Wales Landscape Level Analysis (POWLLA) provide assurances of timber sale levels that far exceed industry needs for the foreseeable future. While the DEIS acknowledges the existence of POWLLA, it makes no mention of the plan to harvest 200 mmbf of old growth, plus 271 mmbf of young growth outside roadless areas in next decade. After more than two years of community partnership and local stakeholder input with the FS (all done while assuming the 2001 roadless rule remained in effect), the DEIS now states that the entire POWLLA would be scrapped with any changes to the Roadless Rule: [ldquo]The Prince of Wales

Landscape Level Assessment was conducted and remains in line with the 2001 Roadless Rule. Any changes to the Roadless Rule would necessitate a review of the POWLLA by the responsible official and a change analysis presented to the public. The 2016 TLMP provides 46 mmbf/yr of old growth and young growth volume, trending toward primarily young growth by about 2030. The POWLLA shows a completed transition to young growth harvesting at 50 mmbf/yr in seven years (starting 2027), and a diminishing old growth volume limit of 15 mmbf/yr starting 2027 dropping to a sustained long-term annual OG volume limit of 5 mmbf/yr starting 2032. Timber harvest has averaged about 36 mmbf/yr for the past 10 years (DEIS Table 3.2-3, p. 106), and recent unprocessed exports account for nearly half that total (DEIS Table 3.2-6, p. 109). Thus, if projected supply more than meets agreed to sale levels, why is it necessary to eliminate protections against commercial timber sales and new roads on all 9.2 million acres of roadless lands only to gain access to an additional 130,000 acres of old growth, when 260,000 acres of old growth are already available to satisfy industry demand (see DEIS Table 2-9, p.65)?

Your explanation strains credulity: Although no additional harvest would take place, the expansion of suitable areas means that greater area is available for the development of sales, allowing more choices for the development of economic ones (DEIS, p. 230). This logic is severely flawed. Current conditions offer a sober truth old growth harvest proposals encounter two major problems: 1) potential harvest acres decline dramatically (about 70 percent) when on-the-ground inventory is done, resulting in unplanned-for downfall; and 2) old growth defect averages 50-70 percent on the Tongass. You hope to add about 160,000 acres of old growth by eliminating roadless area protections, but the aforementioned downfall will likely yield less than 50,000 useful acres. Coupled with defect issues, we estimate the reduced yields per acre to net only 3.5 mmbf/yr; substantially less than what is currently achievable from roaded young growth stands at much less cost. In addition, the high risk of litigation losses over clearcutting old growth in former roadless lands is a major hurdle to contemplate. This lays bare your motivation for more flexibility.

It is astounding that an agency that aspires to conservation leadership would consider trading the crown jewels of the premiere temperate rainforest on Earth for 30 shekels of silver. The symbolism of the Forest Service giving away 9.2 million acres of hard fought protections for a few million board feet of environmentally and financially costly old growth forest defies reason.

As we two authors have repeatedly sought to explain to the Forest Service, there is a better way forward. Your own intensive young growth inventory conducted between 2016-2018 shows 50-70 year old stands outperforming mbf/ac volumes listed for prior and planned for old growth timber sales. Further, your inventory results even show stands aged 40-50 years in the Prince of Wales region (where the bulk of young growth is on the Tongass) are already achieving mbf/ac volumes equal to old growth, indicating that a sustainable supply of young growth is already available for harvest, and this will increase in future decades. Specifically, based on GIS analysis work conducted by GEOS/NRDC in 2015 on the Tongass (using Forest Service data), over 130,000 young growth acres of suitable (after eliminating all environmentally sensitive acres), roaded (within 800' of a currently open Forest Service road) forests are available. You have had this information since 2016 but do not include this analysis in the DEIS.

Even more troubling is the appearance that you have eliminated information from the record that negates your argument. Concurrent with the development of POWLLA, the Research Station in Juneau and Portland, Oregon received \$600,000 to engage in a peer-reviewed and approved young growth wood quality study design. Research statisticians selected 9 study sites that would statistically reflect the larger young growth landscape on POW (called scope of inference sites): 2 at Maybeso, 2 at Naukiti, 1 at Heceta, 2 at Twelve Mile, 1 at Coffman Cove, and 1 at Winter Harbor. Region 10 and Tongass staff were apprised of these site selections in early 2017. By mid-2018, the Research Station concluded their intensive in-field inventory work on the selected scope of inference POW sites, resulting in the following -- both Maybeso sites (55-59 yrs old) were inventoried at 40 mbf/ac; both Naukiti sites (60-64 yrs) were inventoried at 44-49 mbf/ac; Heceta (45-49 yrs) was inventoried at 30 mbf/ac; and Winter Harbor at 37 mbf/ac (60-64 yrs). Merchantable volumes for these selected sites all surpassed past and future old growth sale volumes. In contrast, both Twelve Mile sites (50-54 yrs) inventoried at 11-18 mbf/ac, and Coffman Cove (45-49 years) at 14 mbf/ac. These inventory results were made available to both the Region and Tongass NF. The 2016-2018 young growth inventory work completed by the Forest Service included only Twelve Mile and Coffman Cove sites but notably (and inexplicably) excluded the known high-production scope of inference young growth acres. Yet, even with this rather obvious omission, the 2016-2018 inventory results prove favorable for young growth acres.

We exported and analyzed the FS 2016-2018 young growth inventory data originally downloaded into its public Tongass Portal:

(<https://www.arcgis.com/apps/MapJournal/index.html?appid=e748ce92139c4100a65ad8b12510d620#>) Results underscored high mbf/ac merchantable volume performance in young growth stands equivalent to or better than past and planned old growth timber sales, particularly in the Prince of Wales region [ndash] even without the scope of inference sites referenced above. This information was released to the Region and the public in August 2019. But prior to the October 2019 DEIS release, the FS deleted all young growth age-class data originally downloaded to their public portal, thus making it impossible for the public to correlate merchantable mbf/ac matched to young growth age class area. Why was this done?

You have chosen a terribly difficult way forward. Based on past adjudicated cases, Alternative 6 virtually guarantees litigation that the agency will likely lose -- at great cost, no less [ndash] furthering the folly of sunk costs. The devotion to clearcutting old growth in dedicated roadless areas doubles down on a risky, uncertain 10-year bridge to your avowed transition to primarily young growth timber supply. Forest Service timber supply is but one of many headwinds faced by Alaska[rsquo]s troubled timber industry. Even though ample young growth is accessible right now to meet demand, you have chosen to delay the transition for several more years. And now you are proposing to eliminate protections on 9.2 million acres of Earth[rsquo]s premiere temperate rainforest to manufacture [ldquo]flexibility[rdquo] in finding a few million board feet of old growth to clearcut to supply a highly subsidized timber industry.

We support No Action. Don[rsquo]t give the State of Alaska what they want. Rather, give them what they need: 1) a sound, sensible, and sustainable environment; 2) a more resilient and efficient economy; and 3) enduring social stability.

We might suggest that this highly improbable course of action is actually one you hoped to avoid, until President Trump intervened. Is it conceivable that you would publish this DEIS with the premise that the outcome is still unknown, relying on good faith evaluation of public comment such as ours, and due process, while President Trump has already dictated the outcome? If true, I urge you to do as former Forest Service Chief Jack Ward Thomas implored: TELL THE TRUTH! Forsake the charade and tell it like it is. Even though Trump knows little and cares less of the decades-long struggle to create the [ldquo]long-term, durable approach to roadless area management . . . that accommodates the unique biological, social, and economic situation found in and around the Tongass,[rdquo] it would at least be honest to let all concerned citizens know how and why he, and he alone, has dictated the outcome. No matter how distasteful, such documentation would obey the letter and spirit of NEPA.

USDA Forest Service

Attn: Alaska Roadless Rule

P.O. Box 21628

Juneau, Alaska, 99802

We are writing to express our view that Alternative 6 is not the best approach to [ldquo]meaningfully address local economic and development concerns and roadless area conservation needs[rdquo] (DEIS, p. 38). We have been directly involved for several years in efforts aimed at resolving the very issues raised by the State of Alaska in their petition. The mutual goal of a long-term, durable approach is laudable. Your current proposal is

not. In fact, Alternative 1 (No Action) best meets this goal. The Roadless Conservation Rule has been adjudicated often, and specifically for Tongass National Forest, to finally represent a fundamentally fair and legally valid long-term, durable solution. Further, your agency has exercised the discretion granted in the Rule to accommodate more than 50 requests for exemption, each granted within a month from original request submittal date.

A fundamental goal is to manage Tongass timber resources so as to conserve its prodigious, world-class temperate rainforest and all the values that flow therefrom, while providing meaningful certainty and stability for local timber industry. Addressing this goal is our primary concern. Our premise is that this is easily achieved under Alternative 1, and requires no change to the status of the Tongass 9.2 million acre roadless area landscape.

While you must consider the State's petition, you are not required to agree with their request. We suggest that you respond by choosing Alternative 1.

At the heart of the concern for the future of Alaska's timber industry is the current state of the industry and the forest landscape itself. Much has been written of the long-term decline of the industry, the reasons for the decline, and the prognosis. We acknowledge this history and the role the Forest Service has played in creating the current reality, but will not add anything new here. Distance from markets, legal liabilities associated with clearcutting old-growth forests, negative effects on other important Alaska assets (such as fisheries), below-cost timber sale and export restrictions, high defect rates in old growth timber, long-term subsidies, lack of value-added manufacturing and archaic industry milling facilities are among the factors that affect the issue. A transition to reliance on young growth supply, increasing value-added product manufacturing, and adroit management can deal with such factors to improve future industry prospects while conserving roadless values. Your proposed Alternative 6 is unnecessary and, far from meaningfully addressing the current situation, will make matters worse by increasing risk and uncertainty.

Why is your proposal unnecessary? Briefly, your 2016 Tongass Land Management Plan (TLMP) and the March 2019 Prince of Wales Landscape Level Analysis (POWLLA) provide assurances of timber sale levels that far exceed industry needs for the foreseeable future. While the DEIS acknowledges the existence of POWLLA, it makes no mention of the plan to harvest 200 mmbf of old growth, plus 271 mmbf of young growth outside roadless areas in next decade. After more than two years of community partnership and local stakeholder input with the FS (all done while assuming the 2001 roadless rule remained in effect), the DEIS now states that the entire POWLLA would be scrapped with any changes to the Roadless Rule: [Idquo]The Prince of Wales Landscape Level Assessment was conducted and remains in line with the 2001 Roadless Rule. Any changes to the Roadless Rule would necessitate a review of the POWLLA by the responsible official and a change analysis presented to the public[rdquo]. The 2016 TLMP provides 46 mmbf/yr of old growth and young growth volume, trending toward primarily young growth by about 2030. The POWLLA shows a completed transition to young growth harvesting at 50 mmbf/yr in seven years (starting 2027), and a diminishing old growth volume limit of 15 mmbf/yr starting 2027 dropping to a sustained long-term annual OG volume limit of 5 mmbf/yr starting 2032. Timber harvest has averaged about 36 mmbf/yr for the past 10 years (DEIS Table 3.2-3, p. 106), and recent unprocessed exports account for nearly half that total (DEIS Table 3.2-6, p. 109). Thus, if projected supply more than meets agreed to sale levels, why is it necessary to eliminate protections against commercial timber sales and new roads on all 9.2 million acres of roadless lands only to gain access to an additional 130,000 acres of old growth, when 260,000 acres of old growth are already available to satisfy industry demand (see DEIS Table 2-9, p.65)?

Your explanation strains credulity: [Idquo]Although no additional harvest would take place, the expansion of suitable areas means that greater area is available for the development of sales, allowing more choices for the development of economic ones [Idquo] (DEIS, p. 230). This logic is severely flawed. Current conditions offer a sober truth [ndash] old growth harvest proposals encounter two major problems: 1) potential harvest acres decline dramatically (about 70 percent) when on-the-ground inventory is done, resulting in unplanned-for [Idquo]downfall[rdquo]; and 2) old growth defect averages 50-70 percent on the Tongass. You hope to add about 160,000 acres of old growth by eliminating roadless area protections, but the aforementioned downfall will likely yield less than 50,000 useful acres. Coupled with defect issues, we estimate the reduced yields per acre to net only 3.5 mmbf/yr; substantially less than what is currently achievable from roaded young growth stands at much less cost. In addition, the high risk of litigation losses over clearcutting old growth in former roadless lands is a major hurdle to contemplate. This lays bare your motivation for [Idquo]more flexibility[rdquo].

It is astounding that an agency that aspires to conservation leadership would consider trading the crown jewels of the premiere temperate rainforest on Earth for [ldquo]30 shekels of silver[rdquo]. The symbolism of the Forest Service giving away 9.2 million acres of hard fought protections for a few million board feet of environmentally and financially costly old growth forest defies reason.

As we two authors have repeatedly sought to explain to the Forest Service, there is a better way forward. Your own intensive young growth inventory conducted between 2016-2018 shows 50-70 year old stands outperforming mbf/ac volumes listed for prior and planned for old growth timber sales. Further, your inventory results even show stands aged 40-50 years in the Prince of Wales region (where the bulk of young growth is on the Tongass) are already achieving mbf/ac volumes equal to old growth, indicating that a sustainable supply of young growth is already available for harvest, and this will increase in future decades. Specifically, based on GIS analysis work conducted by GEOS/NRDC in 2015 on the Tongass (using Forest Service data), over 130,000 young growth acres of suitable (after eliminating all environmentally sensitive acres), roaded (within 800[rsquo] of a currently open Forest Service road) forests are available. You have had this information since 2016 but do not include this analysis in the DEIS.

Even more troubling is the appearance that you have eliminated information from the record that negates your argument. Concurrent with the development of POWLLA, the Research Station in Juneau and Portland, Oregon received \$600,000 to engage in a peer-reviewed and approved young growth wood quality study design. Research statisticians selected 9 study sites that would statistically reflect the larger young growth landscape on POW (called [ldquo]scope of inference[rdquo] sites): 2 at Maybeso, 2 at Naukiti, 1 at Heceta, 2 at Twelve Mile, 1 at Coffman Cove, and 1 at Winter Harbor. Region 10 and Tongass staff were apprised of these site selections in early 2017. By mid-2018, the Research Station concluded their intensive in-field inventory work on the selected scope of inference POW sites, resulting in the following -- both Maybeso sites (55-59 yrs old) were inventoried at 40 mbf/ac; both Naukiti sites (60-64 yrs) were inventoried at 44-49 mbf/ac; Heceta (45-49 yrs) was inventoried at 30 mbf/ac; and Winter Harbor at 37 mbf/ac (60-64 yrs). Merchantable volumes for these selected sites all surpassed past and future old growth sale volumes. In contrast, both Twelve Mile sites (50-54 yrs) inventoried at 11-18 mbf/ac, and Coffman Cove (45-49 years) at 14 mbf/ac. These inventory results were made available to both the Region and Tongass NF. The 2016-2018 young growth inventory work completed by the Forest Service included only Twelve Mile and Coffman Cove sites but notably (and inexplicably) excluded the known high-production scope of inference young growth acres. Yet, even with this rather obvious omission, the 2016-2018 inventory results prove favorable for young growth acres.

We exported and analyzed the FS 2016-2018 young growth inventory data originally downloaded into its public Tongass Portal:

(<https://www.arcgis.com/apps/MapJournal/index.html?appid=e748ce92139c4100a65ad8b12510d620#>) Results underscored high mbf/ac merchantable volume performance in young growth stands equivalent to or better than past and planned old growth timber sales, particularly in the Prince of Wales region [ndash] even without the scope of inference sites referenced above. This information was released to the Region and the public in August 2019. But prior to the October 2019 DEIS release, the FS deleted all young growth age-class data originally downloaded to their public portal, thus making it impossible for the public to correlate merchantable mbf/ac matched to young growth age class area. Why was this done?

You have chosen a terribly difficult way forward. Based on past adjudicated cases, Alternative 6 virtually guarantees litigation that the agency will likely lose -- at great cost, no less [ndash] furthering the folly of sunk costs. The devotion to clearcutting old growth in dedicated roadless areas doubles down on a risky, uncertain 10-year bridge to your avowed transition to primarily young growth timber supply. Forest Service timber supply is but one of many headwinds faced by Alaska[rsquo]s troubled timber industry. Even though ample young growth is accessible right now to meet demand, you have chosen to delay the transition for several more years. And now you are proposing to eliminate protections on 9.2 million acres of Earth[rsquo]s premiere temperate rainforest to manufacture [ldquo]flexibility[rdquo] in finding a few million board feet of old growth to clearcut to supply a highly subsidized timber industry.

We support No Action. Don[rsquo]t give the State of Alaska what they want. Rather, give them what they need: 1) a sound, sensible, and sustainable environment; 2) a more resilient and efficient economy; and 3) enduring social stability.

We might suggest that this highly improbable course of action is actually one you hoped to avoid, until President Trump intervened. Is it conceivable that you would publish this DEIS with the premise that the

outcome is still unknown, relying on good faith evaluation of public comment such as ours, and due process, while President Trump has already dictated the outcome? If true, I urge you to do as former Forest Service Chief Jack Ward Thomas implored: TELL THE TRUTH! Forsake the charade and tell it like it is. Even though Trump knows little and cares less of the decades-long struggle to create the [ldquo]long-term, durable approach to roadless area management . . . that accommodates the unique biological, social, and economic situation found in and around the Tongass,[rdquo] it would at least be honest to let all concerned citizens know how and why he, and he alone, has dictated the outcome. No matter how distasteful, such documentation would obey the letter and spirit of NEPA.

Comments:

My name is Shearle Furnish and I live in Little Rock, Arkansas.

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Shearle Furnish

USDA Forest Service

Attn: Alaska Roadless Rule

P.O. Box 21628

Juneau, Alaska, 99802

We are writing to express our view that Alternative 6 is not the best approach to "meaningfully address local economic and development concerns and roadless area conservation needs" (DEIS, p. 38). We have been directly involved for several years in efforts aimed at resolving the very issues raised by the State of Alaska in their petition. The mutual goal of a long-term, durable approach is laudable. Your current proposal is not. In fact, Alternative 1 (No Action) best meets this goal. The Roadless Conservation Rule has been adjudicated often, and specifically for Tongass National Forest, to finally represent a fundamentally fair and legally valid long-term, durable solution. Further, your agency has exercised the discretion granted in the Rule to accommodate more than 50 requests for exemption, each granted within a month from original request submittal date.

A fundamental goal is to manage Tongass timber resources so as to conserve its prodigious, world-class temperate rainforest and all the values that flow therefrom, while providing meaningful certainty and stability for local timber industry. Addressing this goal is our primary concern. Our premise is that this is easily achieved under Alternative 1, and requires no change to the status of the Tongass 9.2 million acre roadless area landscape.

While you must consider the State's petition, you are not required to agree with their request. We suggest that you respond by choosing Alternative 1.

At the heart of the concern for the future of Alaska's timber industry is the current state of the industry and the forest landscape itself. Much has been written of the long-term decline of the industry, the reasons for the decline, and the prognosis. We acknowledge this history and the role the Forest Service has played in creating the current reality, but will not add anything new here. Distance from markets, legal liabilities associated with clearcutting old-growth forests, negative effects on other important Alaska assets (such as fisheries), below-cost timber sale and export restrictions, high defect rates in old growth timber, long-term subsidies, lack of value-added manufacturing and archaic industry milling facilities are among the factors that affect the issue. A transition to reliance on young growth supply, increasing value-added product manufacturing, and adroit management can deal with such factors to improve future industry prospects while conserving roadless values.

Your proposed Alternative 6 is unnecessary and, far from meaningfully addressing the current situation, will make matters worse by increasing risk and uncertainty.

Why is your proposal unnecessary? Briefly, your 2016 Tongass Land Management Plan (TLMP) and the March 2019 Prince of Wales Landscape Level Analysis (POWLLA) provide assurances of timber sale levels that far exceed industry needs for the foreseeable future. While the DEIS acknowledges the existence of POWLLA, it makes no mention of the plan to harvest 200 mmbf of old growth, plus 271 mmbf of young growth outside roadless areas in next decade. After more than two years of community partnership and local stakeholder input with the FS (all done while assuming the 2001 roadless rule remained in effect), the DEIS now states that the entire POWLLA would be scrapped with any changes to the Roadless Rule: "The Prince of Wales Landscape Level Assessment was conducted and remains in line with the 2001 Roadless Rule. Any changes to the Roadless Rule would necessitate a review of the POWLLA by the responsible official and a change analysis presented to the public". The 2016 TLMP provides 46 mmbf/yr of old growth and young growth volume, trending toward primarily young growth by about 2030. The POWLLA shows a completed transition to young growth harvesting at 50 mmbf/yr in seven years (starting 2027), and a diminishing old growth volume limit of 15 mmbf/yr starting 2027 dropping to a sustained long-term annual OG volume limit of 5 mmbf/yr starting 2032. Timber harvest has averaged about 36 mmbf/yr for the past 10 years (DEIS Table 3.2-3, p. 106), and recent unprocessed exports account for nearly half that total (DEIS Table 3.2-6, p. 109). Thus, if projected supply more than meets agreed to sale levels, why is it necessary to eliminate protections against commercial timber sales and new roads on all 9.2 million acres of roadless lands only to gain access to an additional 130,000 acres of old growth, when 260,000 acres of old growth are already available to satisfy industry demand (see DEIS Table 2-9, p.65)?

Your explanation strains credulity: "Although no additional harvest would take place, the expansion of suitable areas means that greater area is available for the development of sales, allowing more choices for the development of economic ones " (DEIS, p. 230). This logic is severely flawed. Current conditions offer a sober truth - old growth harvest proposals encounter two major problems: 1) potential harvest acres decline dramatically (about 70 percent) when on-the-ground inventory is done, resulting in unplanned-for "downfall"; and 2) old growth defect averages 50-70 percent on the Tongass. You hope to add about 160,000 acres of old growth by eliminating roadless area protections, but the aforementioned downfall will likely yield less than 50,000 useful acres. Coupled with defect issues, we estimate the reduced yields per acre to net only 3.5 mmbf/yr; substantially less than what is currently achievable from roaded young growth stands at much less cost. In addition, the high risk of litigation losses over clearcutting old growth in former roadless lands is a major hurdle to contemplate. This lays bare your motivation for "more flexibility".

It is astounding that an agency that aspires to conservation leadership would consider trading the crown jewels of the premiere temperate rainforest on Earth for "30 shekels of silver". The symbolism of the Forest Service giving away 9.2 million acres of hard fought protections for a few million board feet of environmentally and financially costly old growth forest defies reason.

As we two authors have repeatedly sought to explain to the Forest Service, there is a better way forward. Your own intensive young growth inventory conducted between 2016-2018 shows 50-70 year old stands outperforming mbf/ac volumes listed for prior and planned for old growth timber sales. Further, your inventory results even show stands aged 40-50 years in the Prince of Wales region (where the bulk of young growth is on the Tongass) are already achieving mbf/ac volumes equal to old growth, indicating that a sustainable supply of young growth is already available for harvest, and this will increase in future decades. Specifically, based on GIS analysis work conducted by GEOS/NRDC in 2015 on the Tongass (using Forest Service data), over 130,000 young growth acres of suitable (after eliminating all environmentally sensitive acres), roaded (within 800' of a currently open Forest Service road) forests are available. You have had this information since 2016 but do not include this analysis in the DEIS.

Even more troubling is the appearance that you have eliminated information from the record that negates your argument. Concurrent with the development of POWLLA, the Research Station in Juneau and Portland, Oregon received \$600,000 to engage in a peer-reviewed and approved young growth wood quality study design. Research statisticians selected 9 study sites that would statistically reflect the larger young growth landscape on POW (called "scope of inference" sites): 2 at Maybeso, 2 at Naukiti, 1 at Heceta, 2 at Twelve Mile, 1 at Coffman Cove, and 1 at Winter Harbor. Region 10 and Tongass staff were apprised of these site selections in early 2017. By mid-2018, the Research Station concluded their intensive in-field inventory work on the selected scope of inference POW sites, resulting in the following -- both Maybeso sites (55-59 yrs old) were

inventoried at 40 mbf/ac; both Naukiti sites (60-64 yrs) were inventoried at 44-49 mbf/ac; Heceta (45-49 yrs) was inventoried at 30 mbf/ac; and Winter Harbor at 37 mbf/ac (60-64 yrs). Merchantable volumes for these selected sites all surpassed past and future old growth sale volumes. In contrast, both Twelve Mile sites (50-54 yrs) inventoried at 11-18 mbf/ac, and Coffman Cove (45-49 years) at 14 mbf/ac. These inventory results were made available to both the Region and Tongass NF. The 2016-2018 young growth inventory work completed by the Forest Service included only Twelve Mile and Coffman Cove sites but notably (and inexplicably) excluded the known high-production scope of inference young growth acres. Yet, even with this rather obvious omission, the 2016-2018 inventory results prove favorable for young growth acres.

We exported and analyzed the FS 2016-2018 young growth inventory data originally downloaded into its public Tongass Portal:

(<https://www.arcgis.com/apps/MapJournal/index.html?appid=e748ce92139c4100a65ad8b12510d620#>) Results underscored high mbf/ac merchantable volume performance in young growth stands equivalent to or better than past and planned old growth timber sales, particularly in the Prince of Wales region - even without the scope of inference sites referenced above. This information was released to the Region and the public in August 2019. But prior to the October 2019 DEIS release, the FS deleted all young growth age-class data originally downloaded to their public portal, thus making it impossible for the public to correlate merchantable mbf/ac matched to young growth age class area. Why was this done?

You have chosen a terribly difficult way forward. Based on past adjudicated cases, Alternative 6 virtually guarantees litigation that the agency will likely lose -- at great cost, no less - furthering the folly of sunk costs. The devotion to clearcutting old growth in dedicated roadless areas doubles down on a risky, uncertain 10-year bridge to your avowed transition to primarily young growth timber supply. Forest Service timber supply is but one of many headwinds faced by Alaska's troubled timber industry. Even though ample young growth is accessible right now to meet demand, you have chosen to delay the transition for several more years. And now you are proposing to eliminate protections on 9.2 million acres of Earth's premiere temperate rainforest to manufacture "flexibility" in finding a few million board feet of old growth to clearcut to supply a highly subsidized timber industry.

We support No Action. Don't give the State of Alaska what they want. Rather, give them what they need: 1) a sound, sensible, and sustainable environment; 2) a more resilient and efficient economy; and 3) enduring social stability.

We might suggest that this highly improbable course of action is actually one you hoped to avoid, until President Trump intervened. Is it conceivable that you would publish this DEIS with the premise that the outcome is still unknown, relying on good faith evaluation of public comment such as ours, and due process, while President Trump has already dictated the outcome? If true, I urge you to do as former Forest Service Chief Jack Ward Thomas implored: TELL THE TRUTH! Forsake the charade and tell it like it is. Even though Trump knows little and cares less of the decades-long struggle to create the "long-term, durable approach to roadless area management . . . that accommodates the unique biological, social, and economic situation found in and around the Tongass," it would at least be honest to let all concerned citizens know how and why he, and he alone, has dictated the outcome. No matter how distasteful, such documentation would obey the letter and spirit of NEPA.

USDA Forest Service

Attn: Alaska Roadless Rule

P.O. Box 21628

Juneau, Alaska, 99802

We are writing to express our view that Alternative 6 is not the best approach to “meaningfully address local economic and development concerns and roadless area conservation needs” (DEIS, p. 38). We have been directly involved for several years in efforts aimed at resolving the very issues raised by the State of Alaska in their petition. The mutual goal of a long-term, durable approach is laudable. Your current proposal is not. In fact, Alternative 1 (No Action) best meets this goal. The Roadless Conservation Rule has been adjudicated often, and specifically for Tongass National Forest, to finally represent a fundamentally fair and *legally valid long-term, durable solution*. Further, your agency has exercised the discretion granted in the Rule to accommodate more than 50 requests for exemption, each granted within a month from original request submittal date.

A fundamental goal is to manage Tongass timber resources so as to conserve its prodigious, world-class temperate rainforest and all the values that flow therefrom, while providing meaningful certainty and stability for local timber industry. Addressing this goal is our primary concern. Our premise is that this is easily achieved under Alternative 1, and requires no change to the status of the Tongass 9.2 million acre roadless area landscape.

While you must consider the State’s petition, you are not required to agree with their request. We suggest that you respond by choosing Alternative 1.

At the heart of the concern for the future of Alaska’s timber industry is the current state of the industry and the forest landscape itself. Much has been written of the long-term decline of the industry, the reasons for the decline, and the prognosis. We acknowledge this history and the role the Forest Service has played in creating the current reality, but will not add anything new here. Distance from markets, legal liabilities associated with clearcutting old-growth forests, negative effects on other important Alaska assets (such as fisheries), below-cost timber sale and export restrictions, high defect rates in old growth timber, long-term subsidies, lack of value-added manufacturing and archaic industry milling facilities are among the factors that affect the issue. A transition to reliance on young growth supply, increasing value-added product manufacturing, and adroit management can deal with such factors to improve future industry prospects while conserving roadless values. Your proposed Alternative 6 is unnecessary and, far from meaningfully addressing the current situation, will make matters worse by increasing risk and uncertainty.

Why is your proposal unnecessary? Briefly, your 2016 Tongass Land Management Plan (TLMP) and the March 2019 Prince of Wales Landscape Level Analysis (POWLLA) provide assurances of timber sale levels that far exceed industry needs for the foreseeable future. While the DEIS acknowledges the existence of POWLLA, it makes *no mention* of the plan to harvest 200 mmbf of old growth, plus 271 mmbf of young growth outside roadless areas in next decade. After more than two years of community partnership and local stakeholder input with the FS (all done while assuming the 2001 roadless rule remained in effect), the DEIS now states that the entire POWLLA would be scrapped with any changes to the Roadless Rule: “The Prince of Wales Landscape Level Assessment was conducted and remains in line with the 2001 Roadless Rule. Any changes to the Roadless Rule would necessitate a review of the POWLLA by the responsible official and a change analysis presented to the public”. The 2016 TLMP provides 46 mmbf/yr of old growth and young growth volume, trending toward primarily young growth by about 2030. The POWLLA shows a completed transition to young growth harvesting at 50 mmbf/yr in seven years

(starting 2027), and a diminishing old growth volume limit of 15 mmbf/yr starting 2027 dropping to a sustained long-term annual OG volume limit of 5 mmbf/yr starting 2032. Timber harvest has averaged about 36 mmbf/yr for the past 10 years (DEIS Table 3.2-3, p. 106), and recent unprocessed exports account for nearly half that total (DEIS Table 3.2-6, p. 109). Thus, if projected supply more than meets agreed to sale levels, *why* is it necessary to eliminate protections against commercial timber sales and new roads on all 9.2 million acres of roadless lands only to gain access to an additional 130,000 acres of old growth, when 260,000 acres of old growth are already available to satisfy industry demand (see DEIS Table 2-9, p.65)?

Your explanation strains credulity: “Although no additional harvest would take place, the expansion of suitable areas means that greater area is available for the development of sales, allowing more choices for the development of economic ones “ (DEIS, p. 230). This logic is severely flawed. Current conditions offer a sober truth – old growth harvest proposals encounter two major problems: 1) potential harvest acres decline dramatically (about 70 percent) when on-the-ground inventory is done, resulting in unplanned-for “downfall”; and 2) old growth defect averages 50-70 percent on the Tongass. You hope to add about 160,000 acres of old growth by eliminating roadless area protections, but the aforementioned downfall will likely yield less than 50,000 useful acres. Coupled with defect issues, we estimate the reduced yields per acre to net only 3.5 mmbf/yr; substantially less than what is currently achievable from roaded young growth stands at much less cost. In addition, the high risk of litigation losses over clearcutting old growth in former roadless lands is a major hurdle to contemplate. This lays bare your motivation for “more flexibility”.

It is astounding that an agency that aspires to conservation leadership would consider trading the crown jewels of the premiere temperate rainforest on Earth for “30 shekels of silver”. The symbolism of the Forest Service giving away *9.2 million acres* of hard fought protections for a few million board feet of environmentally and financially costly old growth forest defies reason.

As we two authors have repeatedly sought to explain to the Forest Service, there is a better way forward. Your own intensive young growth inventory conducted between 2016-2018 shows 50-70 year old stands outperforming mbf/ac volumes listed for prior and planned for old growth timber sales. Further, your inventory results even show stands aged 40-50 years in the Prince of Wales region (where the bulk of young growth is on the Tongass) are already achieving mbf/ac volumes equal to old growth, indicating that a sustainable supply of young growth is already available for harvest, and this will increase in future decades. Specifically, based on GIS analysis work conducted by GEOS/NRDC in 2015 on the Tongass (using Forest Service data), over 130,000 young growth acres of *suitable* (after eliminating all environmentally sensitive acres), roaded (within 800’ of a currently open Forest Service road) forests are available. You have had this information since 2016 but do not include this analysis in the DEIS.

Even more troubling is the appearance that you have eliminated information from the record that negates your argument. Concurrent with the development of POWLLA, the Research Station in Juneau and Portland, Oregon received \$600,000 to engage in a peer-reviewed and approved young growth wood quality study design. I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies.

Regards, Charles Furnival

My name is Richard Furst and I live in Honolulu, Hawaii.

This is completely senseless. The current White House administration is doing nothing but sacrificing the health, welfare, and national heritage of Americans for the sake of his corporate cronies profits. It must be stopped!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

HC5661

Dear U.S. Forest Service,

CC: Alaska Congressional Delegation and Federal Administration

I support the no-action alternative to leave the 2001 Roadless Rule in place on the Tongass National Forest. We must continue to phase out old-growth clear-cut logging and instead prioritize restoring degraded watersheds and fish streams that contribute to the growing fisheries and tourism-based economies of Southeast. To that end, please conserve the Tongass 77 and TNC priority areas in the final Roadless Rule.

Sincerely,

Comments: *(Eg: list locations you recreate, or why you value Tongass fish & wildlife)* [Text italicized for emphasis]

I support all of Sitka conservation societies work on the Tongass.

[Box unchecked] I would like to get more involved in the campaign!

*By taking this action, you are consenting to receive future communications via phone, text message, email, or mail from Sitka Conservation Society and its partners working to protect the Tongass. * [Text italicized for emphasis]

You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

In Southeast Alaska, tourism accounts for 28% of employment and generate an annual \$1 billion in economic benefit, making it far more of an economic driver than the timber industry, which is less than 1% of the regional economy.

Any choice but the No Action alternative would also put wildlife and critical habitat at risk, threaten access to clean water, and be a step in the wrong direction on climate change jeopardizing Alaskans at a time when the state already faces severe challenges related to rising temperatures. I urge you not to abandon the Roadless Rule in Alaska and instead to put the public interest above corporate profits by choosing to keep the rule in place unchanged.

Thank you for considering my comments.

Regards, Marc Futernick

My name is Wendy Futrick and I live in Sinking Spring, Pennsylvania.

Leave our wilderness areas alone so our children and grandchildren can enjoy them!

I am writing to express strong opposition to efforts to roll back the Roadless Area Conservation Rule (Roadless Rule) in Alaska or elsewhere. The Roadless Rule was implemented with unprecedented public support to protect some of our nations most pristine public lands, including large parts of the Tongass National Forest. You must choose the No Action alternative. Any other choice would ignore overwhelming public support and harm Alaskans, including Alaska Natives, and taxpayers across the nation.

Comments:

I am writing to support the No-Action Alternative for the Draft Environmental Impact Statement on the proposed Alaska Roadless Rule, Alternative #1. I support keeping the current Roadless Rule protections in place and intact for the Tongass National Forest. Trump's plan is yet another attack from the Trump administration on Indigenous rights. Alaskan Native communities -- including the Tlingit, Haida, and Tsimshian peoples -- have depended on the Tongass Rainforest for millennia. It is the backbone to their culture, traditions, and communities -- we simply cannot let it disappear.

The Tongass contains some of the largest intact old-growth temperate rainforest in the world, and its value in providing clean water for fish and wildlife habitat is essential to the economic and ecological health of Southeast Alaska. I urge you to keep the federal Roadless Rule intact and current protections in place for national forests in Alaska.

In addition, I strongly object to your plans to reduce and remove protections from our national forests roadless areas. The Roadless Rule is one of the smartest and most popular land management policies the Federal Government has ever adopted. Not only does it preserve some of America's best fish and wildlife habitat, but it also saves untold millions of taxpayer dollars that might otherwise be spent to subsidize money-losing timber sales. The value of the Roadless Rule in preventing environmentally damaging and economically wasteful road-building and logging is particularly relevant in the Tongass, where logging costs vastly exceed timber revenues and require unconscionable taxpayer subsidies. LEAVE OUR WILDERNESS AREAS ALONE!!

Regards, Wendy Futrick

Comments:

As a supporter of Backcountry Hunters & Anglers and our wild public lands, waters and wildlife, I am very concerned with the proposed rulemaking announced in Federal Register Document Number 2019-0023. I am writing these comments to strongly encourage you to maintain roadless area protections for the Tongass National Forest, including the wild fisheries habitat in the Tongass 77 and adopt the no action Alternative 1. These public lands and waters are prized by sportsmen and women and are a mainstay of Alaska's economy, helping drive an \$887 billion economic engine from outdoor recreation like hunting and fishing.

At nearly 17 million acres, the Tongass is the nation's largest national forest and the world's largest remaining intact coastal temperate rainforest; 9.3 million acres of that wild backcountry is inventoried roadless areas, providing high quality habitat for a unique diversity of sought-after game species, including mountain goats, black-tailed deer and both brown and black bears. The Tongass also encompasses thousands of miles of salmon-rich waterways, legendary among anglers and fundamental to the state's commercial salmon industry. The commercial fishing sector alone relies on the Tongass for more than 80 percent of its salmon and employs more than 4,300 people in the region, accounting for 9 percent of the area's entire employment. By contrast, timber production accounts for only 1 percent of the region's jobs.

Further, this proposal and the preferred alternative set a slippery precedent that threatens to unravel roadless rule protections for fish and wildlife across all of our nation's wild roadless forest lands. None of the identified alternatives take into consideration BHA's scoping comments to include balanced management policies for the Tongass, utilizing the 2001 Roadless Area Conservation Rule as a foundational benchmark for improvements so that any roadless policies only enhance the most important fish and wildlife habitats. Logging and timber harvest already co-exist with roadless areas in the Tongass after years of prior compromise and consensus-building.

I implore you to maintain the integrity of Alaska's roadless areas and the Tongass 77, critical watersheds for trout and salmon. The Roadless Area Conservation Rule is a collaborative management approach adopted following one of the most extensive public engagement campaigns in the history of federal rulemaking. It may be America's best and most popular land management rule ever. The costs to American taxpayers for road building and unconscionably subsidized resource extraction are too high - not to mention the irreparable impact to wildlife, water, subsistence practices and traditions like hunting and fishing.
