

Rationale for Changes to Green Flat Project

In response to scoping, the Grindstone Ranger District is modifying the proposed Green Flat Restoration project. The project as originally proposed is being withdrawn and replaced by the Green Flat Salvage Project and a new restoration proposal.

The Green Flat Salvage project would include removal of merchantable Douglas-fir meeting fire-injured tree guidelines (70% or higher probability of dying) within the originally proposed salvage units (up to 250 acres) in the Sullivan Management Area. No other biomass removal, reforestation, or restoration activity is proposed.
