National Wilderness Preservation System Database: Key Attributes and Trends, 1964 Through 1999

**Peter Landres
Shannon Meyer**

Abstract

Landres, Peter; Meyer, Shannon. 2000. **National Wilderness Preservation System database: key attributes and trends, 1964 through 1999**. Gen. Tech. Rep. RMRS-GTR-18. Ogden, UT: U.S. Department of Agriculture, Rocky Mountain Research Station. 98 p.

The Wilderness Act of 1964 established a National Wilderness Preservation System, and this publication is a compilation of selected information about every wilderness within this System. For each wilderness, the following information is given: legally correct wilderness name; public law that established the wilderness; date the enabling law was signed by the President; acreage designated in the enabling public law; modifying public law or laws that affected the name, boundary, or administration; current total acreage reported by the administering agency, the agency or agencies with current administrative authority; administering unit or units within the agency; State or States in which the wilderness is located. This information is arranged in nine different tables, each arranged and sorted in different ways to allow the reader to easily find desired information. In addition to this publication, this information is also available on the World Wide Web site <http://www.wilderness.net/nwps> in a relational database that can be queried. Sources for all information included here are described, and exceptions and special cases are discussed. All the information included in this database has been verified by wilderness specialists within each of the four agencies with responsibility for managing wilderness. Based on the data in this publication, various trends in wilderness from 1964 through 1999 are described, including the total number of wildernesses, acres of wilderness, agency administration, size of individual wildernesses, and State distribution. An appendix of all public laws establishing or modifying wilderness is included. For each public law, the following information is also given: the States affected by that law, the management agencies designated by that law, the number of wilderness study areas designated (if any), and whether special provisions were included in that law.

Keywords: wilderness public law, Forest Service, Bureau of Land Management, Fish and Wildlife Service, National Park Service, National Wildlife Refuge, National Monument, National Seashore, National Recreation Area, National Park and Preserve, Wilderness Act

The Authors

Peter Landres is Research Ecologist at the Rocky Mountain Research Station's Aldo Leopold Wilderness Research Institute in Missoula, Montana. Dr. Landres holds a Ph.D. degree in Ecology and Biology from Utah State University, and a B.S. degree in Natural Science from Lewis and Clark College. He is active in developing the knowledge to improve the ecological management of wilderness.

Shannon Meyer is a Policy Analyst at the Rocky Mountain Research Station's Aldo Leopold Wilderness Research Institute in Missoula, Montana. Ms. Meyer holds an M.S. degree in Environmental Policy from the University of Montana, and a B.A. degree in Environmental studies and Government from Bowdoin College. She is active in developing policy frameworks for improving the management of wilderness.

Acknowledgments

Many people generously gave their time and effort to provide information or review portions of this database, including Greg Aplet, Virginia Beres, Paul Brink, David Cole, Wayne Freimund, Chris Ryan, David Spildie, Ralph Swain and all the individuals listed in Appendix B. We are especially grateful for the support of the various agencies from Liz Close, Lenny Eubanks, Jeff Jarvis, Rob Hellie, Sue Matthews, Connie Myers, Jerry Stokes, and Jim Walters. The Director of the Leopold Institute, David Parsons, consistently and graciously supported this effort. Keith Corrigall and Hal Halett started all this with their vision and persistence. We also thank Ed Kleiman, Jay Kolbe, and Mary Gage Stringfellow for their initial work on this Database. Keith Vanderwielen researched and graciously supplied updates to the shifting Forest and Ranger District designation of many Forest Service wildernesses. We are especially grateful to Markie Hunsiker and the National Geographic Society for the cover map of the National Wilderness Preservation System.

Note to users: This revised publication incorporates the 1999 legislative changes to the National Wilderness Preservation System. The text, figures, tables, and the Appendix on public laws have all been revised to accommodate these changes. As in any publication with thousands of tiny bits of information, some errors were found in the previous edition. All the errors that have been brought to the authors' attention have been corrected.

You may order additional copies of this publication by sending your mailing information in label form through one of the following media. Please specify the publication title and General Technical Report number.

National Wilderness Preservation System Database: Key Attributes and Trends, 1964 Through 1999

Peter Landres
Shannon Meyer

Introduction

The Wilderness Act of 1964 established a National Wilderness Preservation System (NWPS) “to secure for the American people of present and future generations the benefits of an enduring resource of wilderness.” The 1964 Act established 9.1 million acres of Forest Service land in 54 wildernesses. Now, after 104 pieces of legislation (see Appendix A), the NWPS is composed of over 104 million acres in 628 wildernesses, across 44 States, and administered by four Federal agencies: the USDA Forest Service (FS), and the USDI Bureau of Land Management (BLM), Fish and Wildlife Service (FWS), and the National Park Service (NPS).

There are three primary reasons why an NWPS Database is needed. First, previous published compilations of NWPS information (Reed 1987, 1988; Browning and others 1988; Rosenberg 1994) are out of date. Second, with four independent agencies and nearly constant legislative and administrative changes to the wilderness system, there is a lack of consistency and accuracy in reporting and maintaining information about the NWPS. And third, with expanding socio-economic pressures to develop currently undeveloped Federal lands, there is increasing interest and need from both public and private sectors for a single source of reliable information on the key attributes of wildernesses nationwide.

The purpose of this NWPS Database is to provide a single source for consistent, accurate, and current as well as historical information about the wildernesses in the NWPS in an accessible and easy-to-use format. Every effort has been made to make this NWPS Database as accurate as possible, relying on verifiable information sources that have been validated and cross-checked. The purpose of this publication is to describe the construction of this Database, to provide this information in printed form, and to summarize general trends in the administration and distribution of wilderness over the 35 year history of the NWPS.

This publication is also available at the World Wide Web site <http://www.wilderness.net/nwps>. All NWPS data at this internet site are in a relational database that allows querying, sorting, and generating reports that can be downloaded into the user's computer system. On-line instructions guide users through this relational database.

Our intent is that this Database be useful for those in need of accurate wilderness information. Such information can be used for a variety of purposes. For example, managers, researchers, or advocates can develop an in-depth understanding about the NWPS or about a specific wilderness or group of wildernesses. We illustrate some of these uses below in an analysis of historical trends in wilderness designation, as well as analyses of current patterns in geographic and agency representation, size-class distribution, and State distribution. When combined with information that is not part of this Database, such as data on recreation use, demographic and socio-economic data, or ecological information, relationships between wilderness and these other attributes may be analyzed. In addition, this NWPS Database provides a sound baseline to which information about changes to existing wildernesses or the designation of new wildernesses may be added, and from which trends and patterns can be analyzed in the future.

This summary is organized by first describing the content and structure of the nine component spreadsheets. The sources used in compiling this information are then described. We show where inconsistencies exist between legislative and agency sources, and in these situations we explain our choices of which data were used, as well as exceptions to these choices and special cases. We next describe the number of wildernesses that are within the NWPS, and discuss differences between this information and other wilderness compilations. Finally, we demonstrate how these data can be used by analyzing some major trends in wilderness designation and distribution across the NWPS.

Content and Organization of the Database

This NWPS Database includes the following information for every wilderness:

- Legally correct name cited in the enabling public law
- Public law that established the wilderness
- Date the enabling law was signed by the President
- Acreage designated in the enabling public law
- Modifying public law or laws that affect the name, boundary, or administration
- Current total acreage reported by the administering agency
- Agency or agencies with administrative authority
- Administering units within each agency
- State or States in which the wilderness is located

Different users have different needs for how this information is organized, and we present this information in a variety of different formats to facilitate access to the desired data. Each bulleted entry below identifies a distinct spreadsheet, showing the name of the spreadsheet, its contents, and how the spreadsheet was sorted.

- **Wilderness Name**
 - composed of wilderness name, agency, State, year designated and current total acreage
 - sorted alphabetically by wilderness name
- **Current BLM Acreages**
 - composed of wilderness name, State, administrative unit within the BLM, and current acreage within each administrative unit
 - sorted alphabetically by State and then alphabetically by wilderness name
- **Current FS Acreages**
 - composed of wilderness name, State, administrative unit within the FS, and current acreage within each administrative unit
 - sorted by State, then alphabetically by wilderness name, and by administrative unit
- **Current FWS Acreages**
 - composed of wilderness name, State, administrative unit within the FWS, and current acreage within each administrative unit
 - sorted by State, then alphabetically by wilderness name, and by administrative unit
- **Current NPS Acreages**
 - composed of wilderness name, State, administrative unit within the NPS, and current acreage within each administrative unit
 - sorted by State, then alphabetically by wilderness name, and by administrative unit

- **Current State Acreages**
 - composed of wilderness name, agency, administrative unit, current acreage within each administrative unit, and total State acreage
 - sorted by State, then alphabetically by wilderness name, agency, and administrative unit
- **Public Laws and Acreages**
 - composed of wilderness name, agency, State, establishing and modifying public laws, date established, and acreage designated by the public law
 - sorted by agency, then State, alphabetically by wilderness name, and chronologically by date established
- **Administrative Units of the BLM**
 - composed of wilderness name, State, and the administrative hierarchy to its lowest applicable level
 - sorted alphabetically by State, wilderness name and administrative unit
- **Administrative Units of the FS**
 - composed of wilderness name, State, region, and the administrative hierarchy to its lowest level responsible for that wilderness
 - sorted alphabetically by region, State, wilderness name, and administrative unit

In most cases, the purpose for a particular spreadsheet is obvious from its content and sorting. The last two spreadsheets, Administrative Units of the BLM and FS, are included because these agencies have finer levels of administration for their wildernesses, unlike the FWS and NPS which have only a single level of administration. Acreages are not available at this finer level of administration, and while accurate as of the date of publication, the administrative offices responsible for a particular wilderness and the names of these offices can change rapidly.

Several abbreviations are used within the spreadsheets to save space, including the above agency abbreviations and the following: FO (Field Office), NF (National Forest), NWR (National Wildlife Refuge), NP (National Park), NP&P (National Park and Preserve), NM (National Monument), NSS (National Seashore), RD (Ranger District), RA (Resource Area), and NR (National Recreation Area).

Sources of Information

An important aspect of ensuring that this NWPS Database is the most accurate and current source for wilderness information was determining which sources to rely on for different types of wilderness data. This database refers to both legal and administrative documents for accurate and legally binding information.

Sources include government documents, agency publications, and communications with agency personnel. All of the documents used in this NWPS Database are listed in the References and Appendices, including all of the Public Laws and other government documents used to support these data. Due to space restrictions, specific sources used for every entry in this Database are not included here. The authors may be contacted for any of this information.

In addition, wilderness information is in a constant state of flux. Every year, Congress may establish new wildernesses and issue legislation redrawing wilderness boundaries and adding or subtracting acreage. Ongoing mapping efforts also produce new and more accurate data on wilderness size. Accordingly, this database can only provide a snapshot of the NWPS as it stood in 1999.

The Federal laws which established units of the NWPS, beginning with the Wilderness Act of 1964 and including all subsequent wilderness legislation, are the legally correct source for the wilderness names, locations, original acreage, and dates of designation. In some cases, discrepancies exist between the name commonly used for a wilderness, and the name listed in the enabling legislation. Unless an official decision was made to change the public law name, either administratively or legislatively, the name listed in the public law is legally binding and is used here. The accuracy of the public law numbers listed for each agency were checked against Title 16 of the U.S. Code (1998), which lists all units of the NWPS, the laws affecting them, and dates of enactment. Administrative information in this Database, including administering agency, administrative units, and current acreage for every wilderness, was derived from data supplied by the four land management agencies.

This NWPS Database distinguishes between public law acreage, which is the acreage listed in the enabling legislation, and the current acreage, which is supplied by the administering agencies. The public law acreage for a given wilderness is merely an approximation. When a wilderness is officially designated, the legislative language generally reads like the following excerpt from Public Law 96-550 (Section 102(a)(1)):

certain lands in the Gila National Forest, New Mexico, which comprise *approximately* two hundred and eleven thousand three hundred acres, as generally depicted on a map entitled "Aldo Leopold Wilderness-Proposed" dated August 1980, and which shall be known as the Aldo Leopold Wilderness. [emphasis added]

Once an area becomes part of the NWPS, the managing agencies usually survey or map it and update the legislated acreage with more accurate information. In the above example, the Forest Service lists the acreage for the Aldo Leopold wilderness as 202,016 acres, a difference of over 9,000 acres from the public law acreage.

Current wilderness acreages within this database do not include private and State inholdings. Data on the exact size of wilderness inholdings within individual wildernesses is not uniformly available from the managing agencies. However, the omission of inholding acres accounts for some of the large discrepancies between public law acreage and current acreage. The Boundary Waters Canoe Area Wilderness (BWCA) is a good example. Initially designated wilderness in 1964, in 1978 Public Law 95-495 amended the size of the BWCA, listing the total acreage for the area as 1,075,500. The current Forest Service acreage for the BWCA is 809,974, as is listed in this database. This substantial difference can at least in part be attributed to inholdings, according to Forest Service personnel. However, the Forest Service does not have specific data on inholding acreages for this and many other wildernesses.

While the original public law acreage is important from a historical perspective, the administrative acreage is considered the most accurate and up to date. The primary sources for current acreages are the latest agency reports. After the information from these sources was compiled, the database was distributed to regional and national wilderness specialists in each of the agencies (see appendix B). The feedback they provided alerted us to anomalies of specific areas and recent acreage changes. Where a wilderness crosses State boundaries (table 1), or where multiple agencies have jurisdiction for a single wilderness (table 2), there is greater potential for discrepancies in the total acreage. Twenty-one wildernesses are administered by more than one agency; 19 of these are administered

Table 1—Wildernesses in multiple states.

Wilderness	States
Absaroka-Beartooth	MT / WY
Beaver Dam Mountains	AZ / UT
Big Frog	GA / TN
Black Fork Mountain	AR / OK
Cohutta	GA / TN
Coyote Mountains	AZ / CA
Death Valley	CA / NV
Ellicott Rock	GA/ NC/ SC
Havas	AZ / CA
Hells Canyon	ID / OR
Imperial Refuge	AZ / CA
Joyce Kilmer-Slickrock	NC / TN
Mountain Lake	VA / WV
Paria Canyon-Vermilion Cliffs	AZ / UT
Platte River	CO / WY
Red Buttes	OR / CA
Selway-Bitterroot	ID / MT
Southern Nantahala	GA / NC
Wenaha-Tucannon	OR / WA

Table 2—Wildernesses in multiple agencies. The agency administering the largest acreage is listed first.

Wilderness	Agencies
Bighorn Mountain	BLM / FS
Domeland	FS / BLM
Frank Church-River of No Return	FS / BLM
Hells Canyon	FS / BLM
Indian Peaks	FS / NPS
Inyo Mountains	BLM / FS
Ishi	FS / BLM
Kanab Creek	FS / BLM
Kiavah	FS / BLM
Lee Metcalf	FS / BLM
Machesna Mountain	FS / BLM
Mount Massive	FS / FWS
Mt. Moriah	FS / BLM
Powderhorn	BLM / FS
San Gorgonio	FS / BLM
Santa Lucia	FS / BLM
Santa Rosa	BLM / FS
Trinity Alps	FS / BLM
Uncompahgre	FS / BLM
Wild Rogue	FS / BLM
Yolla Bolly-Middle Eel	FS / BLM

by the Forest Service and the BLM, while one is administered by the FS and the FWS, and another is administered by the FS and NPS. Nineteen wildernesses cross State boundaries; of these, 18 occur in two States, and one wilderness occurs in three States.

Exceptions and Special Cases

While the previous section sets forth the guidelines used for choosing accurate data, there are exceptions to these general rules. Many of these exceptions concern the FS, partly because the FS has the greatest number of wilderness units and therefore more opportunities for changes affecting the wilderness and its administration.

Although enabling legislation is the legally binding source for most wilderness information, there are some cases where other sources were used. The most notable case is the acreage of the original 54 wilderness units designated by the Wilderness Act of 1964. The Act, which was signed by President Lyndon Johnson on September 3, 1964, immediately made all Forest Service “wilderness,” “wild,” and “canoe” areas wilderness units of the NWPS. However, the legislation did not include either a list of these units or their acreage. Therefore the source for these public law acreages was not the act itself. It was not until February 8, 1965, that the President submitted a “Message to the House Committee on Interior and Insular Affairs” accompanying the Department of Agriculture’s

Report on these areas (U.S. Congress House of Representatives 1965). The “Report of the Secretary of Agriculture on the Status of National Forest Units of the National Wilderness Preservation System” included a list of wilderness acreages along with a status report on the agency’s progress in developing regulations for the new system of wilderness. Appendix B of the report lists the name, location, description, and size of each wilderness unit.

Wilderness names have changed throughout the history of the system both through legislative and administrative action. Legislative action is necessary to legally change a wilderness or administrative unit name. Wilderness names that have changed through Congressional mandate are shown in table 3. In addition, there are instances where the administrative usage of an alternative name is so widespread that the administrative name is used in this Database. In the case of the Anaconda Pintler Wilderness, the name change was officially made by the managing agency and the U.S. Board of Geographic Names (1978), while the rest are the result of standard usage. The Board of Geographic Names (BGN) is a Federal entity created in 1890 to establish and maintain uniform geographic name usage within the government. It is composed of representatives of Federal agencies and acts as a central authority to which all name questions and problems are directed.

The name of the Forest Service’s Anaconda Pintler Wilderness in Montana was the subject of contention for many years because different spellings of both the wilderness name and other features with the same name were used legislatively, administratively, and publicly. The wilderness was officially designated as the “Anaconda-Pintler Wilderness” by the Wilderness Act of 1964. However, many maps and signs used the spelling “Pintlar” for the peak, pass, meadows, and other features of the same name. The family for which these features were named uses the spelling “Pintler” and had been trying unsuccessfully for years to have the name officially changed. In 1978, the Forest Service agreed to change the spellings from Pintlar to Pintler and at the same time removed the hyphen from the wilderness name. This was an officially documented decision approved by the BGN (Decision List 7803), and the spelling Anaconda Pintler is used in this Database.

Several National Forests have been administratively combined, resulting in name changes that are universally accepted, although not Congressionally mandated. This database uses the combined names so that the information is more easily transferred to on-the-ground situations. This occurs in the following National Forests: Apache-Sitgreaves in Arizona, Beaverhead-Deerlodge in Montana, Bridger-Teton in Wyoming, Humbolt-Toiyabe in California and Nevada,

Table 3—Wilderness name changes. The current name is in bold letters.

Wilderness name	Agency	State	Public law	Year	Explanation
Minarets	FS	CA	88-577	1964

Medicine Bow-Routt in Colorado and Wyoming, Mt. Baker-Snoqualmie in Washington, Salmon-Challis in Idaho, Shasta-Trinity in California, San Juan-Rio Grande in Colorado, Wallowa-Whitman in Oregon, and Wasatch-Cache in Utah. Although used here, these changes are not incorporated into *Land Areas of the National Forest System*, the official Forest Service land data publication. Forest Service administration of wildernesses at the Ranger District level is also reported in this Database, but as with the National Forests, District-level administration changes over time.

A change that is accepted by the Forest Service Land Areas publication but is not legislatively supported involves the Headwaters Wilderness in Wisconsin. Three wildernesses, Headwaters, Shelp Lake, and Kimball Creek, were designated by Public Law 98-321 in 1984. The three areas were designated separately because they are separated by a road that did not fit the characteristics of a potential wilderness. They have always been managed as one unit, however, and are now referred to collectively as the Headwaters Wilderness.

Another interesting situation involves two wildernesses on the Francis Marion National Forest in South Carolina. In 1980, Public Law 96-560 named two different wilderness study areas "Wambaw Swamp Wilderness." Section 201(e) of the public law states that the lands "which comprise approximately 5,100 acres...depicted on a map entitled 'Wambaw Swamp Wilderness-Proposed', dated May 1980...shall be known as the Wambaw Swamp Wilderness." Subsequently, Section 201(g) designates another 5,100 acres known previously as "Little Wambaw Swamp Wilderness-Proposed" as the Wambaw Swamp Wilderness as well. While just the Wambaw Swamp is listed in the U.S. Code list of wildernesses, the FS *Land Areas of the National Forest System* book includes both a Wambaw Swamp and a Little Wambaw Swamp. The Wilderness Specialist from Forest Service Region 8 asserts that the mistake is in the public law, and that there are in fact two different wildernesses. This argument is bolstered by the fact that the two areas are not even contiguous. The agency's interpretation has been accepted and this database includes both wildernesses.

Number of Wildernesses in the National Wilderness Preservation System

At the time of publication, there are 628 wildernesses in the NWPS. This number differs from figures quoted in other wilderness databases due in part to the changes explained above, recent legislative changes, and the inclusion of inaccurate information in previous lists. Since the publication of the first edition of the NWPS Database in 1998 (RMRS-GTR-18) three new wilderness laws have been passed and four new areas have been created. One recent addition is the Opal Creek Wilderness administered by the FS in Oregon. Although this wilderness was conditionally established by the Oregon Resources Conservation Act of 1996, these conditions were not met until November of 1998 when the area officially joined the system. The three new wilderness laws were passed during the last 3 months of 1999. These laws established two new BLM wildernesses; the Gunnison Gorge Wilderness in Colorado and the Otay Mountain Wilderness in California; and one FS wilderness, the Dugger Mountain Wilderness in Alabama.

A wilderness that is missing from many NWPS descriptions is the Park Service's Chiricahua National Monument Wilderness in Arizona. The Forest Service manages the Chiricahua Wilderness on the Coronado National Forest in Arizona. This, however, is a separate wilderness, according to the U.S. Code, and was designated by a different public law. Some databases erroneously list only one Chiricahua wilderness managed by the two agencies.

Sometimes an agency will refer to different portions of the same wilderness as different wilderness units. Previous compilations of wilderness information have in some cases erroneously included these administrative units as separate wildernesses. This was the case with three Fish and Wildlife Service wildernesses: Bosque del Apache Wilderness in New Mexico, Wichita Mountains Wilderness in Oklahoma, and Moosehorn Wilderness in Maine (fig. 1). The "Moosehorn Wilderness (Baring Unit)" also in Maine, however, is a separate wilderness and is listed as such in the U.S. Code.

Only Congressionally designated wildernesses are included in this database. Where a wilderness is administered by more than one agency, the separately managed areas are referred to in this text as wilderness units. When reporting or discussing the number of wildernesses in the nation, it is important to distinguish the total number of wildernesses in the NWPS from the total number of wilderness units. The total number of wilderness units administered by all four agencies is 649 rather than 628, because 21 wildernesses are jointly administered by more than one agency (see table 2). Each of these 21 wildernesses are

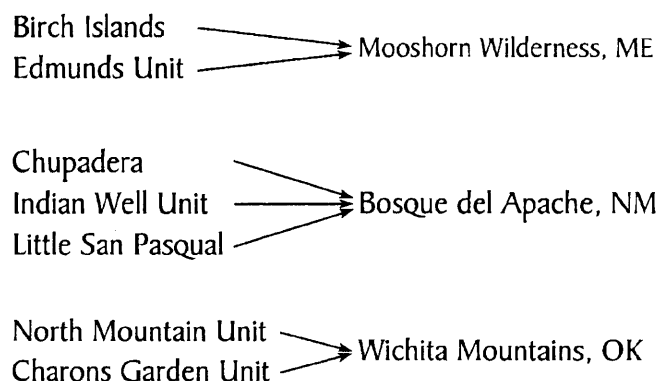

Figure 1—Fish and Wildlife Service administrative units (left side) that are commonly considered wildernesses, and the legally correct name for these wildernesses (right side).

double-counted when deriving the total number of wilderness units administered by the agencies, yielding the larger number.

Trends in Wilderness: 1964 through 1999

The information provided by this Database can be used for many purposes. Along with providing specific data about a particular wilderness, State, or agency, the information in this NWPS Database allows the user to analyze trends across the system and over time. The following analysis of general trends provides an overview of the NWPS and its 35 year development from 1964 to 1999.

Total Number and Acres

The number of wildernesses established (fig. 2) and acres designated (fig. 3) by each Congress shows considerable yearly variation. There were only nine individual years since passage of the Wilderness Act when no wildernesses were designated, and 1965 to 1967 was the only period of three consecutive years in which no wilderness legislation was passed by Congress. In 1984, 175 wildernesses were established, more than double any other year's addition. Despite the record number of new wildernesses in 1984, the largest number of wilderness acres was designated in 1980 with passage of the Alaska National Interest Lands Conservation Act, which added over 56 million acres to the NWPS. Combined with other wilderness laws passed that year, nearly 61 million acres of wilderness were designated in 1980, more than six times the number of acres passed in any other year. These two large additions in 1980 and in 1984, of acres and areas respectively, clearly show in the cumulative yearly total of

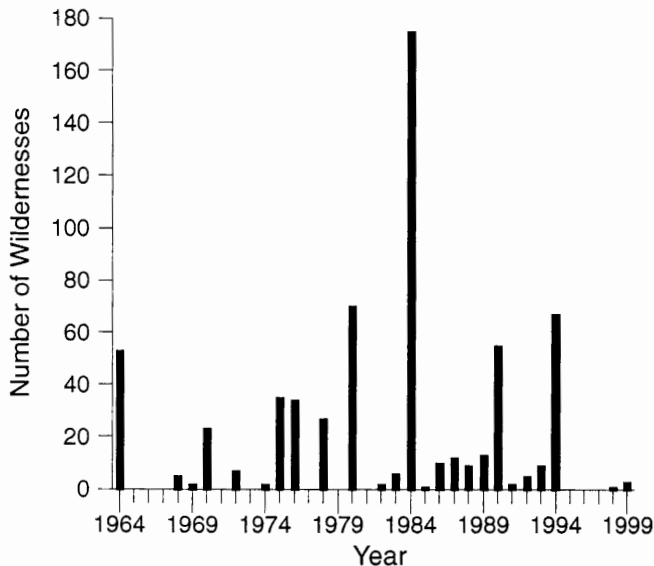

Figure 2—The number of wildernesses established by Congress each year.

wildernesses (fig. 4), and in the cumulative yearly total of wilderness acres (fig. 5). As of 1999, the 628 designated wildernesses occur on 104,739,168 acres. This amount of wilderness is 4.52 percent of the land area of the entire United States. In the lower 48 conterminous States, wilderness occupies 2.40 percent of the land area.

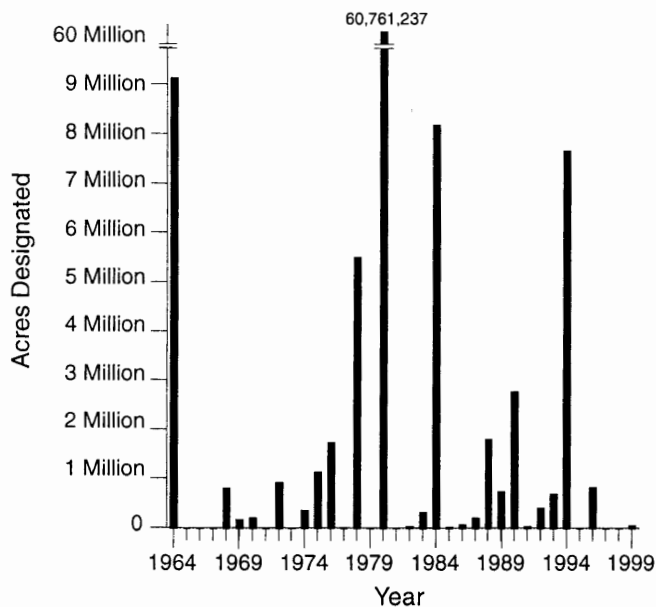

Figure 3—The number of wilderness acres designated by Congress each year. Acres shown here are those designated in the enabling legislation and not the current acres reported by the agencies.

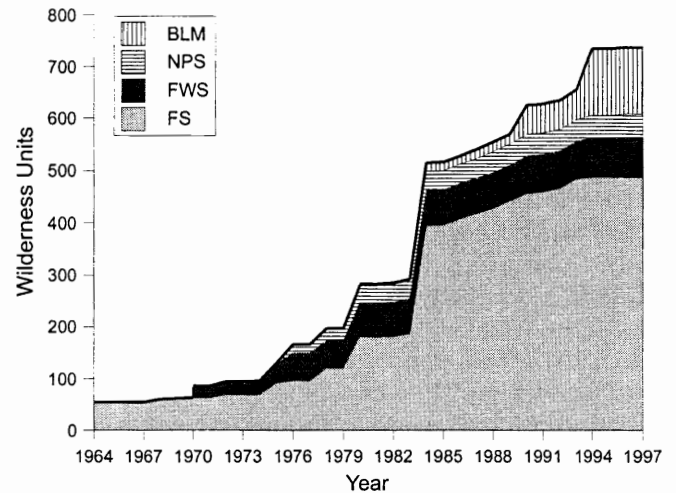

Figure 4—The cumulative yearly total number of wilderness units within the NWPS managed by the four Federal agencies with wilderness responsibility. Data reported in this figure include additions to already designated wildernesses, separate administrative units of the same wilderness when designated that way, and it only lists years that acreage was added; years in which legislation only made name changes or acreage deletions are not included. The 1999 additions are not included here because of the minimal effect on the figure.

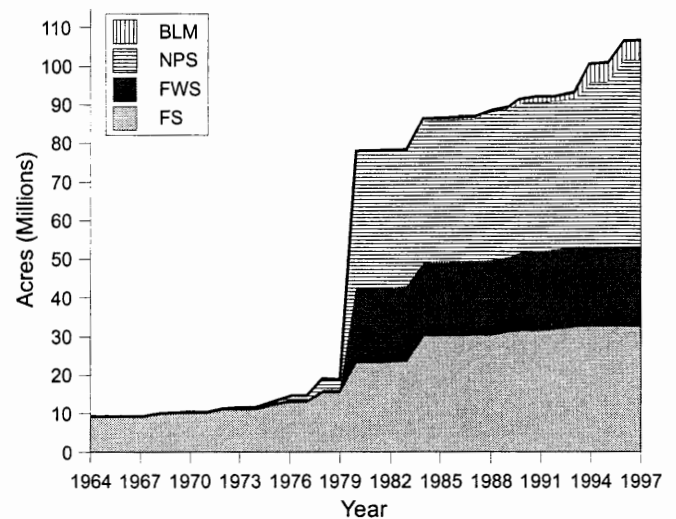

Figure 5—The cumulative yearly total number of acres within the NWPS managed by the four Federal agencies with wilderness responsibility. Data reported in this figure do not include second agency acreage if that agency was not specified in that year's public law. The 1999 additions are not included here because of the minimal effect on the figure.

Agency Administration

The cumulative total number of wildernesses within each agency over the 34 year history of the NWPS is shown in figure 4. For the first 4 years of the NWPS, there were 54 Forest Service wildernesses, with six added in 1968 and two more added in 1969. In 1970, FWS and NPS wildernesses were added, bringing the total number of wildernesses to 85. The following decade saw steady additions to all four agencies. In 1984 the number of FS wildernesses more than doubled, from 187 to 395, and the number of BLM wildernesses increased more than five times, from three to 16. In 1990, BLM wilderness again more than tripled, from 18 to 57. Passage of the California Desert Protection Act of 1994 more than doubled the number of BLM wildernesses to 129.

The cumulative total number of wilderness acres within each agency over the history of the NWPS is shown in figure 5. The 54 Forest Service wildernesses created in 1964 comprised 9,139,721 acres. In 1970, nearly 100,000 FWS acres and slightly over 93,000 NPS acres were added to the NWPS. In 1974, FWS wilderness acreage increased 4 and a half times to nearly 443,000 acres. Passage of the Alaska National Interest Lands Conservation Act of 1980 increased FWS wilderness acreage more than 28 times to 19,243,811 acres, and NPS acreage nearly 12 times to 35,331,000 acres. Wilderness acreage in the BLM

increased nearly six and a half times in 1984, and increased again by more than three times in 1990 and by the same amount in 1994.

Comparing the current number of wildernesses and acres within the NWPS among the four wilderness agencies (table 4) shows that the NPS has the smallest number of wildernesses, 44 (7 percent of the NWPS), and the greatest amount of wilderness acreage, approximately 44 million acres (42 percent of the NWPS). The Forest Service manages the largest number of wildernesses, 400 (62 percent), with nearly 35 million acres (33 percent). The FWS manages 71 wildernesses (11 percent) with over 20 million acres (20 percent), and the BLM manages 133 (20 percent) with a little over 5 million acres (5 percent). Within just the conterminous lower 48 States, the Forest Service manages the greatest amount of wilderness, approximately 29 million acres (63 percent of the NWPS in the conterminous States), the NPS manages slightly over 10 million acres (22 percent), the BLM manages 5.2 million acres (11 percent), and the FWS manages 2 million acres, the smallest amount of wilderness in the lower 48 States.

Comparing the number of wilderness acres within an agency to that agency's total acreage (fig. 6) shows that just under 2 percent of BLM land is wilderness, while nearly 57 percent of NPS land is designated wilderness. The FS and FWS fall between these extremes, with a little over 18 percent and 22 percent, respectively, of agency land in designated wilderness.

Table 4—Agency administration of the NWPS. The number of units managed by each agency does not add up to the total number of wildernesses because some areas are managed by multiple agencies.

Agency	Units	Federal acres	Percent of NWPS acres
Entire NWPS			<i>Percent</i>
Bureau of Land Management	133	5,237,800	5.0
Forest Service	400	34,766,995	33.2
Fish and Wildlife Service	71	20,686,134	19.8
National Park Service	44	44,048,239	42.1
Total	628	104,739,168	
NWPS excluding Alaska			
Bureau of Land Management	133	5,237,800	11.3
Forest Service	381	29,014,774	62.3
Fish and Wildlife Service	50	2,009,222	4.3
National Park Service	36	10,295,156	22.1
Total	600	46,556,952	
NWPS in Alaska			
Forest Service	19	5,752,221	9.9
Fish and Wildlife Service	21	18,676,912	32.1
National Park Service	8	33,753,083	58.0
Total	48	58,182,216	

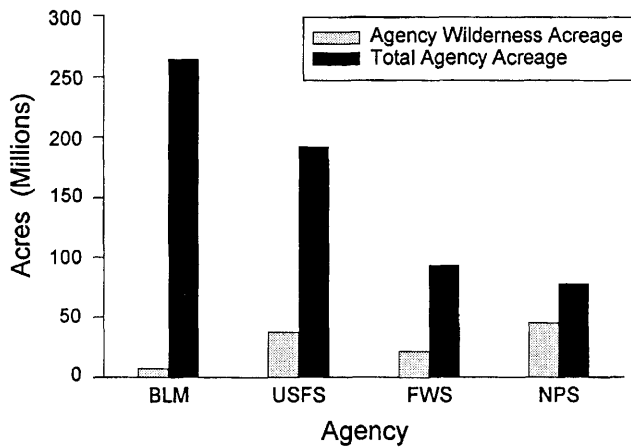

Figure 6—Comparison of each agency's current total wilderness acres with that agency's total land holdings.

Size of Individual Wildernesses

The size class distribution of all wildernesses within the NWPS also reveals interesting trends (fig. 7). There are four wildernesses with over 5 million acres, all in Alaska. The largest wilderness in the NWPS is the National Park Service's Wrangell-St. Elias Wilderness with 9,676,994 acres, larger than the entire original NWPS of 1964, and 9.3 percent of the entire NWPS. The largest wilderness outside of Alaska is the National Park Service's Death Valley Wilderness in California and Nevada at 3,253,028 acres. The second largest wilderness in the conterminous 48 States is the Forest Service's and BLM's Frank Church-River of No Return Wilderness in Idaho at 2,366,698 acres.

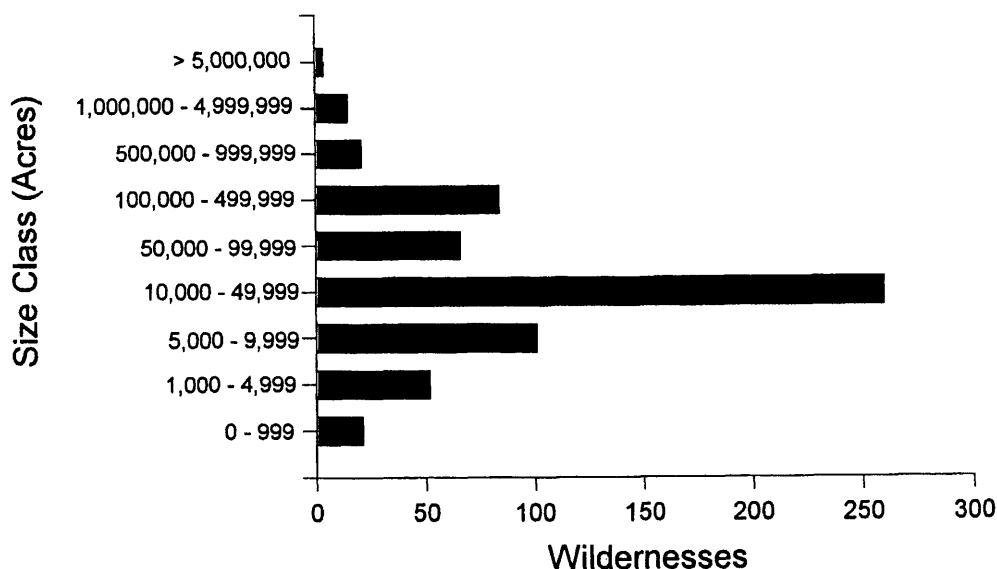

Figure 7—Size class distribution of wildernesses within the NWPS.

Nineteen wildernesses (3 percent of the NWPS) are more than 1 million acres, while 124 wildernesses (20 percent of the NWPS) are more than 100,000 acres. The 10,000 to 50,000 acres size class has the greatest number of wildernesses, with 262 units, or 42 percent of the NWPS.

Although the Wilderness Act of 1964 defined wilderness, in part, as an area that is "at least five thousand acres of land or is of sufficient size as to make practicable its preservation and use in an unimpaired condition" (P.L. 88-77 Sec. 2(c)(3)), there are now 73 wilderness units smaller than 5,000 acres. Of these, 21 are smaller than 1,000 acres: 17 are managed by the FWS and four by the Forest Service. The smallest wilderness is the FWS 5.5 acre Pelican Island Wilderness in Florida. In the past, a BLM administered 5 acre unit of the larger Oregon Island Wilderness was considered the smallest wilderness. The Oregon Resources Conservation Act of 1996 subsumed this small administrative unit into the larger FWS Oregon Islands Wilderness.

State Distribution

The percentage of wilderness in each State is shown in figure 8. Only Connecticut, Delaware, Iowa, Kansas, Maryland, and Rhode Island lack designated wilderness. Alaska has the greatest percentage of wilderness (15.4 percent), followed closely by California (13.8 percent). Not only does Alaska have the greatest proportion of its land in wilderness, the 58,182,216 acres of wilderness in Alaska make up over 55 percent of the acreage of the entire NWPS. Florida has the most wildernesses acreage of any Eastern State. Two States, Ohio and New York, have less than one one-hundredth of a percent of wilderness.

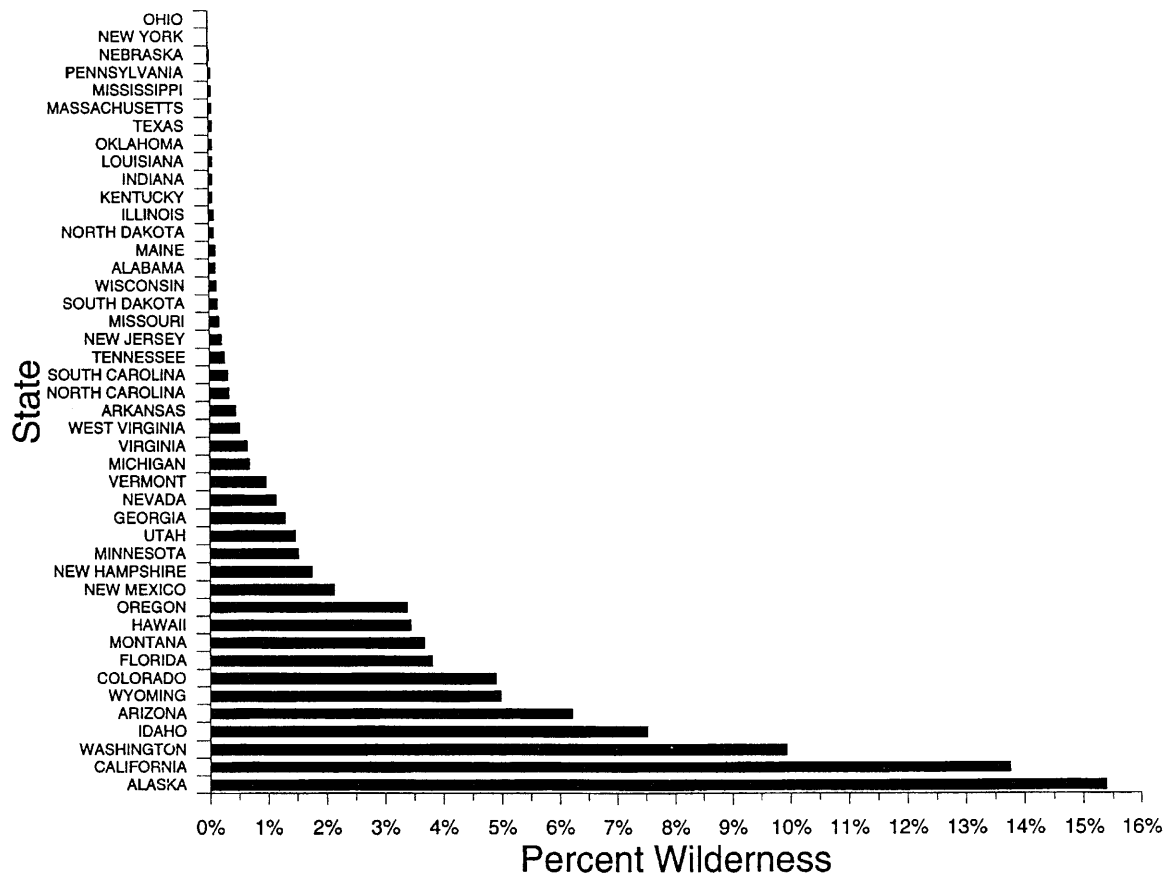

Figure 8—Percentage of State area that is wilderness. State acreages are the total acreage including land and water, derived from the U.S. Department of Commerce (1980).

Wilderness acreage in the 11 Western States of Washington, Oregon, California, Arizona, New Mexico, Nevada, Utah, Colorado, Wyoming, Montana, and Idaho comprises slightly over 40 percent of the entire NWPS, and nearly 91 percent of the NWPS in the lower 48 conterminous States. Western wildernesses also comprise 1.82 percent of the land area of the entire United States, and 2.18 percent of the land area of the conterminous States. Wilderness acreage in the Eastern States together comprises slightly more than 4 percent of the entire NWPS, and 9.5 percent of the NWPS in the lower 48 States. These Eastern wildernesses also comprise 0.19 percent of the land area of the entire United States, and 0.23 percent of the land area of the conterminous States.

It is commonly assumed that there are many small wildernesses in the Eastern States compared to a few,

large wildernesses in the West. This assumption is only partially valid: Eastern wildernesses are smaller, while the Western States have both a greater number and larger wildernesses. Western States have an average of 37 wildernesses per State, compared to an average of five wildernesses per State in the East. Western States have an average of 5.4 percent of their land area in wilderness, compared to the Eastern States average of 0.5 percent land area in wilderness. The average size of a wilderness in the Western States is 101,610 acres, compared to 23,657 acres in the Eastern States. These comparisons show that, compared to the Eastern States, Western States have nearly 6.5 times the average number of wildernesses per State, nearly 11 times the average proportion of their State land area in wilderness, and that Western wildernesses are over four times the average size of Eastern wildernesses.

Appendix A: Public Laws

All public laws designating and affecting wilderness are listed in chronological order below. Each law is followed by a list of four potential items, separated by a (•): States affected by that law; management agencies designated by that law; the number of wilderness study areas (WSAs) designated, if any; and whether special provisions apply. The term “special provisions” as used here refers to specific management directions that apply only to the wildernesses designated by the particular act. These usually reflect unique circumstances and may be exceptions to provisions of the Wilderness Act of 1964. If one of these items is not included, it does not apply to that law. For example, the first law listed below, the Wilderness Act, affected 12 States, designated the USDA Forest Service as the managing agency for all these wildernesses, designated no Wilderness Study Areas, and included special management provisions.

The Rocky Mountain Research Station develops scientific information and technology to improve management, protection, and use of the forests and rangelands. Research is designed to meet the needs of National Forest managers, Federal and State agencies, public and private organizations, academic institutions, industry, and individuals.

Studies accelerate solutions to problems involving ecosystems, range, forests, water, recreation, fire, resource inventory, land reclamation, community sustainability, forest engineering technology, multiple use economics, wildlife and fish habitat, and forest insects and diseases. Studies are conducted cooperatively, and applications may be found worldwide.

Research Locations

Flagstaff, Arizona
Fort Collins, Colorado*
Boise, Idaho
Moscow, Idaho
Bozeman, Montana
Missoula, Montana
Lincoln, Nebraska

Reno, Nevada
Albuquerque, New Mexico
Rapid City, South Dakota
Logan, Utah
Ogden, Utah
Provo, Utah
Laramie, Wyoming

*Station Headquarters, 240 West Prospect Road, Fort Collins, CO 80526

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.
