## Incident Status Summary (ICS-209)

Incident: **Beachie Creek**

**Fuel types consist of mixed conifer, grass and shrub fields with numerous snags and heavy dead and down. Private lands have various aged conifer plantations, NFS lands and upper elevations transition to mature Douglas fir with significant snag component. Live fuels are dormant, grasses are cured, and both may contribute to fire intensity and spread. Previous management and multiple ownerships contribute to many fuel type changes, including residual activity fuels (slash). BOW spot is in heavy down fuels from previous fire event.**

36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:	
12 hours:	<b>Very isolated heat and smoke in the interior with some smoldering. Some smoke may be visible in isolated burning stumps, large down wood, and snags.</b>
24 hours:	<b>Very isolated heat and smoke in the interior with some smoldering. Some smoke may be visible in isolated burning stumps, large down wood, and snags.</b>
48 hours:	<b>Very isolated heat and smoke in the interior with some smoldering. Some smoke may be visible in isolated burning stumps, large down wood, and snags.</b>
72 hours:	<b>Very isolated heat and smoke in the interior with some smoldering. Some smoke may be visible in isolated burning stumps, large down wood, and snags.</b>
Anticipated after 72 hours:	<b>Fire is likely to see minimal fire behavior, due to recent precipitation, high soil moistures, and most large fuel classes above normal moisture content for this time of year. Nighttime RH recovery will be above 90%, and will likely include morning fog. Some smokes are likely to be visible in heavier fuels and stumps; fuel moisture levels not likely to have any high resistance to control, with predicted RH, winds, and temperatures.</b>

37. Strategic Objectives (define planned end-state for incident):	
<b>Protect values at risk to include; surrounding communities, critical infrastructure, state, private and federal lands.</b>	
<b>Complete suppression repair work.</b>	
<b>Firefighter and public safety maintained as the highest priority while engaging the fire. .</b>	

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:	
12 hours:	<b>The threat of fire spread is minimal. Suppression repair efforts have finished for the year and may resume as needed in the spring.</b>
24 hours:	<b>The threat of fire spread is minimal. Suppression repair efforts have finished for the year and may resume as needed in the spring.</b>
